<sup>1</sup> A Contingent Deferred Sales Charge is imposed on Class C Shares. Please refer to Section 3 “Description of Share Classes” of the Prospectus for further information.

<sup>2</sup> The Portfolio pays transaction costs, including taxes and brokerage commissions, each time it buys and sells securities or instruments and may also pay Borrowing Costs. Shareholders should note that these costs are not reflected in the Portfolio’s operating expenses, but will be reflected in its performance.

## 6. Subscriptions, Redemptions and Exchanges

Subject to the terms outlined in the Prospectus, subscriptions, redemptions and exchanges of Shares of the Portfolio may take place on any Business Day. The cut-off time for subscriptions, redemptions and exchanges of Shares of the Portfolio is 2:00 p.m. Central European time on the same Business Day.

## 2. Goldman Sachs China Dynamic Bond Portfolio

### 1. Investment Objective

The Goldman Sachs China Dynamic Bond Portfolio (the “Portfolio”) seeks total return consisting of income and capital appreciation by investing primarily in fixed income securities of Chinese issuers, both government and corporate.

### 2. Investment Policies

The Portfolio will, under normal circumstances, invest at least two thirds of its net assets (excluding cash and cash-equivalents) in both Investment Grade and below Investment Grade fixed income Transferable Securities issued by the Chinese government or by companies that are domiciled in, or derive the predominant proportion of their revenues or profits from China. Such securities may be denominated in CNH, CNY, USD or other currencies.

The Investment Adviser implements a multi-faceted approach to Environmental, Social and Governance (ESG) considerations (“ESG Criteria”) into its fundamental investment process. Further details of the ESG characteristics of the Portfolio can be found in the Portfolio’s relevant Appendix in Supplement V of the Prospectus.

Fixed income Transferable Securities may include (without limitation) fixed and floating rate, senior and subordinated corporate debt obligations (such as bonds, debentures, notes and commercial paper), mortgage and asset-backed securities, collateralised debt and loan obligations, Money Market Instruments, Brady bonds and other debt issued by governments, their agencies and instrumentalities, or by central banks, convertible debt obligations (including CoCos) and reverse repurchase agreements.

The Portfolio may invest up to 100% of its net assets, or up to any other threshold as imposed from time to time by the Applicable Regulator, in PRC Debt Securities, including via Bond Connect, the CIBM Direct Access and/or the qualified foreign institutional investor program (“QFI Program”) as applicable. Please refer to Paragraph 4.2.11 “Investments in China” of the Prospectus.

The Portfolio may invest up to 25% of its net assets in convertible debt obligations, including up to 20% in CoCos, and up to 30% of its net assets in debt instruments with loss-absorption features (loss-absorption products or “LAP”) which may be subject to contingent write-down or contingent conversion to ordinary shares on the occurrence of trigger event(s). Convertible debt obligations include CoCos. LAP instruments include, but are not limited to, CoCos, Tier 1 and Tier 2 capital instruments and senior non-preferred debts. The Portfolio may invest up to 10% of its net assets in distressed securities.

For further information on LAP and the associated risks, please refer to Paragraph 4.4.8 “Debt instruments with loss-absorption features” of the Prospectus. For further information on CoCos and the associated risks, please refer to Paragraph 4.4.15 “Contingent Capital Securities (CoCos)” of the Prospectus.

The Portfolio may invest up to 10% its net assets in equity and/or equity related Transferable Securities. Please note that this limit does not apply to investment in preferred stock.

The Portfolio may invest up to 10% of its net assets in Permitted Funds.

The Portfolio may invest up to 20% of its net assets in mortgage and asset-backed securities either directly or indirectly via a financial index, including but not limited to CMBX. The issuers of such mortgage and asset-backed securities may include but are not limited to government agencies and/or government sponsored enterprises and special purpose vehicles sponsored by banks. These securities are not subject to the ESG Criteria as set forth above.

The Portfolio may also use financial derivative instruments as part of its investment policy or for hedging purposes. These may include, but are not limited to, foreign currency forward contracts, futures, options (on interest rates, credit and currencies), swaps (including interest rate swaps, credit default swaps and total return swaps) and credit linked instruments. For further information on the use of financial derivative instruments and associated risks, please refer to Appendix C – “Derivatives and Efficient Portfolio Management Techniques” together with Section 4 “Risk Considerations” in the Prospectus.

Investors should be aware that the use of financial derivative instruments in the Portfolio may result in both net long and net short exposures in, amongst other things, interest rates, credit and currencies. For further information on the investment techniques used by the Investment Adviser, please refer to Section 3 “Goldman Sachs Funds – Calculation of Global Exposure and Expected Level of Leverage” of the Supplement.

The Portfolio may also hold bank deposits at sight, such as cash held in current accounts with a bank accessible at any time. Such holdings may only temporarily exceed 20% of the net assets of the Portfolio under exceptionally unfavourable market conditions. Moreover, cash equivalents such as deposits, Money Market Instruments and money market funds may be used for the purpose of cash management and in case of unfavourable conditions, provided that the Investment Adviser considers this to be in the best interests of the Shareholders.

The Investment Adviser intends to engage in SFTR techniques on, amongst other things, equity securities, markets, interest rates, credit, currencies, commodity indices and other Permitted Investments in line with the exposures set out below (in each case as a percentage of net asset value).

| Type of transaction                                    | Under normal circumstances it is generally expected that the principal amount of such transactions would represent a proportion of the Portfolio's net asset value indicated below.* | Under normal circumstances it is generally expected that the principal amount of the Portfolio's assets that can be subject to the transaction may represent up to a maximum of the proportion of the Portfolio's net asset value indicated below. |
|--------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Total return swaps                                     | 0%                                                                                                                                                                                   | 50%                                                                                                                                                                                                                                                |
| Repurchase, including reverse repurchase, transactions | 1%                                                                                                                                                                                   | 50%                                                                                                                                                                                                                                                |
| Securities lending transactions                        | 1%                                                                                                                                                                                   | 15%                                                                                                                                                                                                                                                |

\*In certain circumstances this proportion may be higher.

### 3. Calculation of Global Exposure and Expected Level of Leverage

The table below sets out for this Portfolio the information mentioned in Section 3 “Goldman Sachs Funds – Calculation of Global Exposure and Expected Level of Leverage” of the Supplement.

| Market Risk Calculation | Limit | Reference Portfolio/Benchmark*              | Expected Level of Leverage              |
|-------------------------|-------|---------------------------------------------|-----------------------------------------|
|                         |       |                                             | Gross Sum of Notionals (Gross Exposure) |
| Absolute VaR            | 20%   | 1 Year China Household Savings Deposit Rate | 0%-150%**                               |

\*The Portfolio is actively managed and is not designed to track its Reference Portfolio/Benchmark. Therefore the performance of the Portfolio and the Reference Portfolio/Benchmark may deviate.

The Portfolio may offer Share Classes which are denominated in or hedged into currencies other than the Base Currency of the Portfolio. Accordingly, the Reference Portfolio/Benchmark noted above may be denominated in or hedged into the relevant currency of a particular Share Class.

\*\*This expected range of leverage is not a limit and may vary over time as described in the Section 3 “Goldman Sachs – Calculation of Global Exposure and Expected Level of Leverage” of the Supplement. The actual levels may deviate from the stated range.

### 4. Principal Risks of the Portfolio

Investing in the Portfolio implies (without limitation) the following risk factors which are listed in the same order as in the Prospectus:

- 4.2 Investment risks and in particular 4.2.9 Emerging Markets and 4.2.11 Investments in China
- 4.4 Investment in debt securities
- 4.6 Investment in derivatives
- 4.7 Other investments
- 4.9 Leverage and hedging
- 4.10 Currency risks
- 4.11 Currency hedging

The Portfolio may be exposed to sustainability risks from time to time. A sustainability risk is defined in the EU Sustainable Finance Disclosure Regulation as an environmental, social or governance event or condition that could cause an actual or a potential material negative impact on the value of investments. The universe of sustainability events or conditions is very broad, and their relevance, materiality and impact on investments will depend on a number of factors such as the investment strategy pursued by the Portfolio, asset class, asset location and asset sector. Depending on the circumstances, examples of sustainability risks can include physical environmental risks, climate change transition risks, supply chain disruptions, improper labour practices, lack of board diversity and corruption. If they materialise, sustainability risks can reduce the value of underlying investments held within the Portfolio and could have a material impact on the performance and returns of the Portfolio.

The Investment Adviser does not operate a risk framework that is specifically tailored to sustainability risks. Rather relevant sustainability risks may be considered as part of the processes adopted by the Investment Adviser to monitor and manage general market risks. Accordingly, the Investment Adviser may integrate sustainability risks in its investment decision making process by having regard to material sustainability events that cause or are reasonably expected to cause broad disruption to economic growth, investor sentiment and asset flows in its ongoing assessment and monitoring of financial markets and the investment risk profile of the Portfolio.

The Investment Adviser may utilise proprietary and/or third-party tools and research to assess and monitor market risks that are relevant to the Portfolio.

Please refer to the relevant paragraphs of Section 4 “Risk Considerations” in the Prospectus which includes further relevant risk considerations.

## 5. Portfolio Share Class Table

The following table sets out the different Share Classes of the Portfolio and relevant fees and expenses. For further details on the Share Classes, please refer to Section 3 “Description of Share Classes” of the Prospectus.

| Base Currency:        | RMB                                                                                                                                                                                                                                                                                                                                                                                                          |              |                                               |                |                  |                                 |
|-----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|-----------------------------------------------|----------------|------------------|---------------------------------|
| Additional Notes:     | Each type of Share Class listed may also be offered:<br><br>(i) Denominated in or hedged into other currencies. For a list of available currencies and minimum investment amounts, please refer to Section 2 “Goldman Sachs Funds – Minimum Investment Amount Table” of the Supplement.<br><br>(ii) As accumulation or distribution classes. Please refer to Section 18 “Dividend Policy” of the Prospectus. |              |                                               |                |                  |                                 |
| Share Class           | Share Class Currency                                                                                                                                                                                                                                                                                                                                                                                         | Sales Charge | Contingent Deferred Sales Charge <sup>1</sup> | Management Fee | Distribution Fee | Operating Expenses <sup>2</sup> |
| Base Shares           | RMB                                                                                                                                                                                                                                                                                                                                                                                                          | Up to 5.50 % | Nil                                           | Up to 1.00%    | Nil              | Variable                        |
| Other Currency Shares | USD                                                                                                                                                                                                                                                                                                                                                                                                          | Up to 5.50 % | Nil                                           | Up to 1.00%    | Nil              | Variable                        |
| Class A Shares        | RMB                                                                                                                                                                                                                                                                                                                                                                                                          | Up to 4.00 % | Nil                                           | Up to 1.00%    | Up to 0.25 %     | Variable                        |

<sup>1</sup> A Contingent Deferred Sales Charge is imposed on Class C Shares. Please refer to Section 3 “Description of Share Classes” of the Prospectus for further information.

<sup>2</sup> The Portfolio pays transaction costs, including taxes and brokerage commissions, each time it buys and sells securities or instruments and may also pay Borrowing Costs. Shareholders should note that these costs are not reflected in the Portfolio’s operating expenses, but will be reflected in its performance.

## 6. Subscriptions, Redemptions and Exchanges

Subject to the terms outlined in the Prospectus, subscriptions, redemptions and exchanges of Shares of the Portfolio may take place on any Business Day. The cut-off time is 2:00 p.m. Central European time on the previous Business Day, as illustrated below. The table refers to 1st February as example date for the receipt of a subscription or a redemption order by the Distributor, the Registrar and Transfer Agent, the Management Company or the Fund (assuming that each of the 1st February and the other dates mentioned below falls on a Business Day).

| Base (Acc.)                                                                                   |                                                                     |

### 3. Goldman Sachs Emerging Markets Corporate Bond Portfolio

#### 1. Investment Objective

The Goldman Sachs Emerging Markets Corporate Bond Portfolio (the “Portfolio”) seeks total returns consisting of income and capital appreciation by investing primarily in fixed income securities of Emerging Markets corporate issuers.

#### 2. Investment Policies

The Portfolio will, under normal circumstances, invest at least two thirds of its net assets (excluding cash and cash-equivalents) in fixed income Transferable Securities issued by companies that are domiciled in, or which derive the predominant proportion of their revenues or profits from Emerging Markets.

The Investment Adviser implements a multi-faceted approach to Environmental, Social and Governance (ESG) considerations (“ESG Criteria”) into its fundamental investment process. Further details of the ESG characteristics of the Portfolio can be found in the Portfolio’s relevant Appendix in Supplement V of the Prospectus.

Fixed income Transferable Securities may include (without limitation) fixed and floating rate, senior and subordinated corporate debt obligations (such as bonds, debentures, notes and commercial paper), mortgage and asset-backed securities, collateralised debt and loan obligations, Money Market Instruments, Brady bonds and other debt issued by governments, their agencies and instrumentalities, or by central banks, convertible debt obligations (including CoCos) and reverse repurchase agreements.

The Portfolio may invest up to 30% of its net assets, or up to any other threshold as imposed from time to time by the Applicable Regulator, in PRC Debt Securities, including via Bond Connect and/or the CIBM Direct Access as applicable. Please refer to Paragraph 4.2.11 “Investments in China” of the Prospectus.

The Portfolio may invest up to 25% of its net assets in convertible debt obligations and up to 30% of its net assets in debt instruments with loss-absorption features (“LAP”) which may be subject to contingent write-down or contingent conversion to ordinary shares on the occurrence of trigger event(s). Convertible debt obligations include CoCos. LAP instruments include, but are not limited to, CoCos, Tier 1 and Tier 2 capital instruments and senior non-preferred debts.

For further information on LAP and the associated risks, please refer to Paragraph 4.4.8 “Debt instruments with loss-absorption features” of the Prospectus and for further information on CoCos and the associated risks, please refer to Paragraph 4.4.15 “Contingent Capital Securities (CoCos)” of the Prospectus.

The Portfolio may invest up to 10% its net assets in equity and/or equity related Transferable Securities. Please note that this limit does not apply to investment in preferred stock.

The Portfolio may invest up to 10% of its net assets in Permitted Funds.

The Portfolio may invest in excess of 20% of its net assets in mortgage and asset-backed securities either directly or indirectly via a financial index, including but not limited to CMBX. The issuers of such mortgage and asset-backed securities may include but are not limited to government agencies and/or government sponsored enterprises and special purpose vehicles sponsored by banks.

The Portfolio may also use financial derivative instruments as part of its investment policy or for hedging purposes. These may include, but are not limited to, foreign currency forward contracts, futures, options (on interest rates, credit and currencies), swaps (including interest rate swaps, credit default swaps and total return swaps) and credit linked instruments. For further information on the use of financial derivative instruments and associated risks, please refer to Appendix C – “Derivatives and Efficient Portfolio Management Techniques” together with Section 4 “Risk Considerations” in the Prospectus.

Investors should be aware that the use of financial derivative instruments in the Portfolio may result in both net long and net short exposures in, amongst other things, interest rates, credit and currencies. For further information on the

investment techniques used by the Investment Adviser, please refer to Section 3 “Goldman Sachs Funds – Calculation of Global Exposure and Expected Level of Leverage” of the Supplement.

The Portfolio may also hold bank deposits at sight, such as cash held in current accounts with a bank accessible at any time. Such holdings may only temporarily exceed 20% of the net assets of the Portfolio under exceptionally unfavourable market conditions. Moreover, cash equivalents such as deposits, Money Market Instruments and money market funds may be used for the purpose of cash management and in case of unfavourable conditions, provided that the Investment Adviser considers this to be in the best interests of the Shareholders.

The Investment Adviser intends to engage in SFTR techniques on, amongst other things, equity securities, markets, interest rates, credit, currencies, commodity indices and other Permitted Investments in line with the exposures set out below (in each case as a percentage of net asset value).

| Type of transaction                                    | Under normal circumstances it is generally expected that the principal amount of such transactions would represent a proportion of the Portfolio's net asset value indicated below.* | Under normal circumstances it is generally expected that the principal amount of the Portfolio's assets that can be subject to the transaction may represent up to a maximum of the proportion of the Portfolio's net asset value indicated below. |

| Repurchase, including reverse repurchase, transactions | 1%                                                                                                                                                                                   | 50%                                                                                                                                                                                                                                                |
| Securities lending transactions                        | 1%                                                                                                                                                                                   | 15%                                                                                                                                                                                                                                                |

\*In certain circumstances this proportion may be higher.

### 3. Calculation of Global Exposure and Expected Level of Leverage

The table below sets out for this Portfolio the information mentioned in Section 3 “Goldman Sachs Funds – Calculation of Global Exposure and Expected Level of Leverage” of the Supplement.

| Market Risk Calculation | Limit | Reference Portfolio/Benchmark*                                                              | Expected Level of Leverage                 |
|-------------------------|-------|---------------------------------------------------------------------------------------------|--------------------------------------------|
|                         |       |                                                                                             | Gross Sum of Notionals<br>(Gross Exposure) |
| Relative VaR            | 2 x   | J.P. Morgan Corporate Emerging Markets Bond Index<br>Broad Diversified (Total Return Gross) | 0%-200%**                                  |

\*The Portfolio is actively managed and is not designed to track its Reference Portfolio/Benchmark. Therefore the performance of the Portfolio and the Reference Portfolio/Benchmark may deviate.

The Portfolio may offer Share Classes which are denominated in or hedged into currencies other than the Base Currency of the Portfolio. Accordingly, the Reference Portfolio/Benchmark noted above may be denominated in or hedged into the relevant currency of a particular Share Class.

\*\*This expected range of leverage is not a limit and may vary over time as described in the Section 3 “Goldman Sachs – Calculation of Global Exposure and Expected Level of Leverage” of the Supplement. The actual levels may deviate from the stated range.

### 4. Principal Risks of the Portfolio

Investing in the Portfolio implies (without limitation) the following risk factors which are listed in the same order as in the Prospectus:

- 4.2 Investment risks and in particular 4.2.9 Emerging Markets and 4.2.11 Investments in China
- 4.4 Investment in debt securities
- 4.6 Investment in derivatives
- 4.7 Other investments
- 4.9 Leverage and hedging
- 4.10 Currency risks
- 4.11 Currency hedging

The Portfolio may be exposed to sustainability risks from time to time. A sustainability risk is defined in the EU Sustainable Finance Disclosure Regulation as an environmental, social or governance event or condition that could cause an actual or a potential material negative impact on the value of investments. The universe of sustainability events or conditions is very broad, and their relevance, materiality and impact on investments will depend on a number of factors such as the investment strategy pursued by the Portfolio, asset class, asset location and asset sector. Depending on the circumstances, examples of sustainability risks can include physical environmental risks, climate change transition risks, supply chain disruptions, improper labour practices, lack of board diversity and corruption. If they materialise, sustainability risks can reduce the value of underlying investments held within the Portfolio and could have a material impact on the performance and returns of the Portfolio.

The Investment Adviser does not operate a risk framework that is specifically tailored to sustainability risks. Rather relevant sustainability risks may be considered as part of the processes adopted by the Investment Adviser to monitor and manage general market risks. Accordingly, the Investment Adviser may integrate sustainability risks in its investment decision making process by having regard to material sustainability events that cause or are reasonably expected to cause broad disruption to economic growth, investor sentiment and asset flows in its ongoing assessment and monitoring of financial markets and the investment risk profile of the Portfolio.

The Investment Adviser may utilise proprietary and/or third-party tools and research to assess and monitor market risks that are relevant to the Portfolio.

Please refer to the relevant paragraphs of Section 4 “Risk Considerations” in the Prospectus which includes further relevant risk considerations.

## 5. Portfolio Share Class Table

The following table sets out the different Share Classes of the Portfolio and relevant fees and expenses. For further details on the Share Classes, please refer to Section 3 “Description of Share Classes” of the Prospectus.

| Base Currency:        | USD                                                                                                                                                                                                                                                                                                                                                                                                          |              |                                               |                |                  |                                 |
|-----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|-----------------------------------------------|----------------|------------------|---------------------------------|
| Additional Notes:     | Each type of Share Class listed may also be offered:<br><br>(i) Denominated in or hedged into other currencies. For a list of available currencies and minimum investment amounts, please refer to Section 2 “Goldman Sachs Funds – Minimum Investment Amount Table” of the Supplement.<br><br>(ii) As accumulation or distribution classes. Please refer to Section 18 “Dividend Policy” of the Prospectus. |              |                                               |                |                  |                                 |
| Share Class           | Share Class Currency                                                                                                                                                                                                                                                                                                                                                                                         | Sales Charge | Contingent Deferred Sales Charge <sup>1</sup> | Management Fee | Distribution Fee | Operating Expenses <sup>2</sup> |

| Class IXO Shares | USD | Nil | Nil | N/A          | Nil | Variable |

<sup>1</sup> A Contingent Deferred Sales Charge is imposed on Class C Shares. Please refer to Section 3 “Description of Share Classes” of the Prospectus for further information.

<sup>2</sup> The Portfolio pays transaction costs, including taxes and brokerage commissions, each time it buys and sells securities or instruments and may also pay Borrowing Costs. Shareholders should note that these costs are not reflected in the Portfolio’s operating expenses, but will be reflected in its performance.

## 6. Subscriptions, Redemptions and Exchanges

Subject to the terms outlined in the Prospectus, subscriptions, redemptions and exchanges of Shares of the Portfolio may take place on any Business Day. The cut-off time for subscriptions, redemptions and exchanges of Shares of the Portfolio is 2:00 p.m. Central European time on the same Business Day.

## 4. Goldman Sachs Emerging Markets Debt Blend Portfolio

### 1. Investment Objective

The Goldman Sachs Emerging Markets Debt Blend Portfolio (the “Portfolio”) seeks total returns consisting of income and capital appreciation by investing primarily in fixed income securities of Emerging Markets government and corporate issuers.

### 2. Investment Policies

The Portfolio will, under normal circumstances, invest at least two thirds of its net assets (excluding cash and cash-equivalents) in fixed income Transferable Securities issued by Emerging Markets governments and companies that are domiciled in or which derive the predominant proportion of their revenues or profits from Emerging Markets. Such securities may be denominated in US dollar or the local currency of Emerging Markets.

The Investment Adviser implements a multi-faceted approach to Environmental, Social and Governance (ESG) considerations (“ESG Criteria”) into its fundamental investment process. Further details of the ESG characteristics of the Portfolio can be found in the Portfolio’s relevant Appendix in Supplement V of the Prospectus.

Fixed income Transferable Securities may include (without limitation) fixed and floating rate, senior and subordinated corporate debt obligations (such as bonds, debentures, notes and commercial paper), mortgage and asset-backed securities, collateralised debt and loan obligations, Money Market Instruments, Brady bonds and other debt issued by governments, their agencies and instrumentalities, or by central banks, convertible debt obligations (including CoCos) and reverse repurchase agreements.

The Portfolio may invest in PRC Debt Securities, including via Bond Connect and/or the CIBM Direct Access as applicable. Please refer to Paragraph 4.2.11 “Investments in China” of the Prospectus.

The Portfolio may invest up to 25% of its net assets in convertible debt obligations, including CoCos. For further information on CoCos and the associated risks, please refer to Paragraph 4.4.15 “Contingent Capital Securities (CoCos)” of the Prospectus.

The Portfolio may invest up to 10% its net assets in equity and/or equity related Transferable Securities. Please note that this limit does not apply to investment in preferred stock.

The Portfolio may invest up to 10% of its net assets in Permitted Funds.

The Portfolio may invest in excess of 20% of its net assets in mortgage and asset-backed securities either directly or indirectly via a financial index, including but not limited to CMBX. The issuers of such mortgage and asset-backed securities may include but are not limited to government agencies and/or government sponsored enterprises and special purpose vehicles sponsored by banks.

The Portfolio may also use financial derivative instruments as part of its investment policy or for hedging purposes. These may include, but are not limited to, foreign currency forward contracts, futures, options (on interest rates, credit and currencies), swaps (including interest rate swaps, credit default swaps and total return swaps) and credit linked instruments. For further information on the use of financial derivative instruments and associated risks, please refer to Appendix C - “Derivatives and Efficient Portfolio Management Techniques” together with Section 4 “Risk Considerations” in the Prospectus.

Investors should be aware that the use of financial derivative instruments in the Portfolio may result in both net long and net short exposures in, amongst other things, interest rates, credit and currencies. For further information on the investment techniques used by the Investment Adviser, please refer to Section 3 “Goldman Sachs Funds - Calculation of Global Exposure and Expected Level of Leverage” of the Supplement.

The Portfolio may also hold bank deposits at sight, such as cash held in current accounts with a bank accessible at any time. Such holdings may only temporarily exceed 20% of the net assets of the Portfolio under exceptionally unfavourable market conditions. Moreover, cash equivalents such as deposits, Money Market Instruments and

money market funds may be used for the purpose of cash management and in case of unfavourable conditions, provided that the Investment Adviser considers this to be in the best interests of the Shareholders.

The Investment Adviser intends to engage in SFTR techniques on, amongst other things, equity securities, markets, interest rates, credit, currencies, commodity indices and other Permitted Investments in line with the exposures set out below (in each case as a percentage of net asset value).

| Type of transaction                                    | Under normal circumstances it is generally expected that the principal amount of such transactions would represent a proportion of the Portfolio's net asset value indicated below.* | Under normal circumstances it is generally expected that the principal amount of the Portfolio's assets that can be subject to the transaction may represent up to a maximum of the proportion of the Portfolio's net asset value indicated below. |
|--------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Total return swaps                                     | 2%                                                                                                                                                                                   | 50%                                                                                                                                                                                                                                                |
| Repurchase, including reverse repurchase, transactions | 1%                                                                                                                                                                                   | 50%                                                                                                                                                                                                                                                |
| Securities lending transactions                        | 1%                                                                                                                                                                                   | 15%                                                                                                                                                                                                                                                |

\*In certain circumstances this proportion may be higher.

### 3. Calculation of Global Exposure and Expected Level of Leverage

The table below sets out for this Portfolio the information mentioned in Section 3 “Goldman Sachs Funds – Calculation of Global Exposure and Expected Level of Leverage” of the Supplement.

| Market Risk Calculation | Limit | Reference Portfolio/Benchmark*                                                                                                                                                                                                                                                      | Expected Level of Leverage                 |
|-------------------------|-------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------|
|                         |       |                                                                                                                                                                                                                                                                                     | Gross Sum of Notionals<br>(Gross Exposure) |
| Relative VaR            | 2 x   | 50% J.P. Morgan Government Bond Emerging Market Index Global Diversified (Total Return Gross) / 25% J.P. Morgan Emerging Market Bond Index Global Diversified (Total Return Gross) / 25% J.P. Morgan Corporate Emerging Markets Bond Index – Broad Diversified (Total Return Gross) | 0%-600%**                                  |

\*The Portfolio is actively managed and is not designed to track its Reference Portfolio/Benchmark. Therefore the performance of the Portfolio and the Reference Portfolio/Benchmark may deviate. The Portfolio may offer Share Classes which are denominated in or hedged into currencies other than the Base Currency of the Portfolio. Accordingly, the Reference Portfolio/Benchmark noted above may be denominated in or hedged into the relevant currency of a particular Share Class.

\*\*This expected range of leverage is not a limit and may vary over time as described in the Section 3 “Goldman Sachs – Calculation of Global Exposure and Expected Level of Leverage” of the Supplement. The actual levels may deviate from the stated range.

Given that many of the strategies used by the Portfolio are implemented through the use of financial derivative instruments, including those referred to in Section 3 “Goldman Sachs Funds - Calculation of Global Exposure and Expected Level of Leverage” of the Supplement, the expected level of leverage, as calculated under the gross sum of notionals exposures, may be relatively high. This is particularly emphasised in the Emerging Markets, currency and duration strategies which often involve the use of swaps, (such as short term interest rate swaps, credit default swaps, total return swaps and equity swaps), futures contracts and forward currency contracts which may result in relatively higher levels of notional exposure. For further information on the use of financial derivative instruments and associated risks, please refer to Section 4 “Risk Considerations” and Appendix C “Derivatives and Efficient Portfolio Management Techniques” in the Prospectus. It also means that the expected level of leverage may exceed the stated range, particularly as a result of effecting certain investment exposures and also as a result of investor redemptions that can result in offsetting financial derivative instruments trades being placed which whilst they reduce investment exposure can increase leverage based on the gross sum of notionals calculation.

Shareholders should note that leverage resulting from the use of financial derivative instruments may result in magnified losses. However, the “Expected Level of Leverage” using the gross sum of notionals in the table above does not necessarily provide an appropriate illustration of the overall risk profile of the Portfolio as financial derivative instruments are used to manage risk as well as to seek return. This is largely due to the fact that the gross sum of notional exposure calculation simply aggregates the absolute sum of all long and short financial derivative instrument

positions, even if the financial derivative instruments are for hedging or offsetting purposes. Further the gross sum of notionals calculation uses just notional values rather than measures that calculate the overall contributions to risk which will often explain why the leverage levels under this method appear high. By way of illustration, to achieve a desired level of investment risk in interest rate markets, the amount of gross leverage used to achieve this risk will vary significantly depending on the underlying market risk (or 'duration') of the instrument chosen to implement this investment decision. For example, using an instrument with less duration risk - such as a shorter maturity interest rate derivative - requires more leverage to achieve the higher amount of required notional market exposure, compared to using a longer maturity instrument with higher duration risk. In this example, a 2 year maturity interest rate derivative would require approximately 4 times as much notional exposure compared to using a 10 year maturity instrument.

Please refer to Paragraph 1 "Investment Objective" and Paragraph 2 "Investment Policies" of this Appendix for further information on the relevant Portfolio's strategy and the Synthetic Risk and Reward Indicator (SRRI) in the KIID of the Portfolio for details on such Portfolio's historic risk profile where applicable. Further details on the average leverage levels, as calculated using the gross sum of notionals exposures, will be disclosed in the Fund's annual financial statements for the relevant accounting period.

#### **4. Principal Risks of the Portfolio**

Investing in the Portfolio implies (without limitation) the following risk factors which are listed in the same order as in the Prospectus:

- 4.2 Investment risks and in particular 4.2.9 Emerging Markets and 4.2.11 Investments in China
- 4.4 Investment in debt securities
- 4.6 Investment in derivatives
- 4.7 Other investments
- 4.9 Leverage and hedging
- 4.10 Currency risks
- 4.11 Currency hedging

The Portfolio may be exposed to sustainability risks from time to time. A sustainability risk is defined in the EU Sustainable Finance Disclosure Regulation as an environmental, social or governance event or condition that could cause an actual or a potential material negative impact on the value of investments. The universe of sustainability events or conditions is very broad, and their relevance, materiality and impact on investments will depend on a number of factors such as the investment strategy pursued by the Portfolio, asset class, asset location and asset sector. Depending on the circumstances, examples of sustainability risks can include physical environmental risks, climate change transition risks, supply chain disruptions, improper labour practices, lack of board diversity and corruption. If they materialise, sustainability risks can reduce the value of underlying investments held within the Portfolio and could have a material impact on the performance and returns of the Portfolio.

The Investment Adviser does not operate a risk framework that is specifically tailored to sustainability risks. Rather relevant sustainability risks may be considered as part of the processes adopted by the Investment Adviser to monitor and manage general market risks. Accordingly, the Investment Adviser may integrate sustainability risks in its investment decision making process by having regard to material sustainability events that cause or are reasonably expected to cause broad disruption to economic growth, investor sentiment and asset flows in its ongoing assessment and monitoring of financial markets and the investment risk profile of the Portfolio.

The Investment Adviser may utilise proprietary and/or third-party tools and research to assess and monitor market risks that are relevant to the Portfolio.

Please refer to the relevant paragraphs of Section 4 "Risk Considerations" in the Prospectus which includes further relevant risk considerations.

#### **5. Portfolio Share Class Table**

The following table sets out the different Share Classes of the Portfolio and relevant fees and expenses. For further details on the Share Classes, please refer to Section 3 "Description of Share Classes" of the Prospectus.

| Base Currency:        | USD                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |              |                                               |                |                  |                          |                                 |
|-----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|-----------------------------------------------|----------------|------------------|--------------------------|---------------------------------|
| Additional Notes:     | <p>Each type of Share Class listed may also be offered:</p> <p>(i) Denominated in or hedged into other currencies. For a list of available currencies and minimum investment amounts, please refer to Section 2 “Goldman Sachs Funds – Minimum Investment Amount Table” of the Supplement.</p> <p>(ii) As accumulation or distribution classes. Please refer to Section 18 “Dividend Policy” of the Prospectus.</p> <p>(iii) As Partially Hedged Share Classes. Please refer to Paragraph 3.23 “Currency Hedged Share Classes” of the Prospectus.</p> |              |                                               |                |                  |                          |                                 |
| Share Class           | Share Class Currency                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Sales Charge | Contingent Deferred Sales Charge <sup>1</sup> | Management Fee | Distribution Fee | Shareholder Services Fee | Operating Expenses <sup>2</sup> |
| Base Shares           | USD                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Up to 5.50 % | Nil                                           | 1.40 %         | Nil              | Nil                      | Variable                        |

<sup>1</sup> A Contingent Deferred Sales Charge is imposed on Class B and Class C Shares. Please refer to Section 3 “Description of Share Classes” of the Prospectus for further information.

<sup>2</sup> The Portfolio pays transaction costs, including taxes and brokerage commissions, each time it buys and sells securities or instruments and may also pay Borrowing Costs. Shareholders should note that these costs are not reflected in the Portfolio's operating expenses, but will be reflected in its performance.

## 6. Subscriptions, Redemptions and Exchanges

Subject to the terms outlined in the Prospectus, subscriptions, redemptions and exchanges of Shares of the Portfolio may take place on any Business Day. The cut-off time for subscriptions, redemptions and exchanges of Shares of the Portfolio is 2:00 p.m. Central European time on the same Business Day.

## 5. Goldman Sachs Emerging Markets Debt Local Portfolio

### 1. Investment Objective

The Goldman Sachs Emerging Markets Debt Local Portfolio (the “Portfolio”) seeks total returns consisting of income and capital appreciation by investing primarily in fixed income securities of Emerging Markets government and corporate issuers, denominated in their local currencies.

### 2. Investment Policies

The Portfolio will, under normal circumstances, invest at least two thirds of its net assets (excluding cash and cash-equivalents) in fixed income Transferable Securities issued by Emerging Markets governments or by companies that are domiciled in, or derive the predominant proportion of their revenues or profits from Emerging Markets. Such securities will be denominated in the local currency of Emerging Markets.

The Investment Adviser implements a multi-faceted approach to Environmental, Social and Governance (ESG) considerations (“ESG Criteria”) into its fundamental investment process. Further details of the ESG characteristics of the Portfolio can be found in the Portfolio’s relevant Appendix in Supplement V of the Prospectus.

Fixed income Transferable Securities may include (without limitation) fixed and floating rate, senior and subordinated corporate debt obligations (such as bonds, debentures, notes and commercial paper), mortgage and asset-backed securities, collateralised debt and loan obligations, Money Market Instruments, Brady bonds and other debt issued by governments, their agencies and instrumentalities, or by central banks, convertible debt obligations (including CoCos), and reverse repurchase agreements.

The Portfolio may invest in PRC Debt Securities, including via Bond Connect and/or the CIBM Direct Access as applicable. Please refer to Paragraph 4.2.11 “Investments in China” of the Prospectus.

The Portfolio may invest up to 25% of its net assets in convertible debt obligations, including CoCos. For further information on CoCos and the associated risks, please refer to Paragraph 4.4.15 “Contingent Capital Securities (CoCos)” of the Prospectus.

The Portfolio may invest up to 10% of its net assets in equity and/or equity related Transferable Securities. Please note that this limit does not apply to investment in preferred stock.

The Portfolio may invest up to 10% of its net assets in Permitted Funds.

The Portfolio may invest in excess of 20% of its net assets in mortgage and asset-backed securities either directly or indirectly via a financial index, including but not limited to CMBX. The issuers of such mortgage and asset-backed securities may include but are not limited to government agencies and/or government sponsored enterprises and special purpose vehicles sponsored by banks.

The Portfolio may also use financial derivative instruments as part of its investment policy or for hedging purposes. These may include, but are not limited to, foreign currency forward contracts, futures, options (on interest rates, credit and currencies), swaps (including interest rate swaps, credit default swaps and total return swaps) and credit linked instruments. For further information on the use of financial derivative instruments and associated risks, please refer to Appendix C - “Derivatives and Efficient Portfolio Management Techniques” together with Section 4 “Risk Considerations” in the Prospectus.

Investors should be aware that the use of financial derivative instruments in the Portfolio may result in both net long and net short exposures in, amongst other things, interest rates, credit and currencies. For further information on the investment techniques used by the Investment Adviser, please refer to Section 3 “Goldman Sachs Funds - Calculation of Global Exposure and Expected Level of Leverage” of the Supplement.

The Portfolio may also hold bank deposits at sight, such as cash held in current accounts with a bank accessible at any time. Such holdings may only temporarily exceed 20% of the net assets of the Portfolio under exceptionally unfavourable market conditions. Moreover, cash equivalents such as deposits, Money Market Instruments and

money market funds may be used for the purpose of cash management and in case of unfavourable conditions, provided that the Investment Adviser considers this to be in the best interests of the Shareholders.

The Investment Adviser intends to engage in SFTR techniques on, amongst other things, equity securities, markets, interest rates, credit, currencies, commodity indices and other Permitted Investments in line with the exposures set out below (in each case as a percentage of net asset value).

|                                                        |                                                                                                                                                                                      |                                                                                                                                                                                                                                                    |
|--------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Type of transaction                                    | Under normal circumstances it is generally expected that the principal amount of such transactions would represent a proportion of the Portfolio's net asset value indicated below.* | Under normal circumstances it is generally expected that the principal amount of the Portfolio's assets that can be subject to the transaction may represent up to a maximum of the proportion of the Portfolio's net asset value indicated below. |

| Securities lending transactions                        | 1%                                                                                                                                                                                   | 15%                                                                                                                                                                                                                                                |

\*In certain circumstances this proportion may be higher.

### 3. Calculation of Global Exposure and Expected Level of Leverage

The table below sets out for this Portfolio the information mentioned in Section 3 "Goldman Sachs Funds – Calculation of Global Exposure and Expected Level of Leverage" of the Supplement.

| Market Risk Calculation | Limit | Reference Portfolio/Benchmark*                                                               | Expected Level of Leverage                 |
|-------------------------|-------|----------------------------------------------------------------------------------------------|--------------------------------------------|
|                         |       |                                                                                              | Gross Sum of Notionals<br>(Gross Exposure) |
| Relative VaR            | 2 x   | J.P. Morgan Government Bond Index - Emerging Markets Global Diversified (Total Return Gross) | 100%-800%**                                |

\*The Portfolio is actively managed and is not designed to track its Reference Portfolio/Benchmark. Therefore the performance of the Portfolio and the Reference Portfolio/Benchmark may deviate. The Portfolio may offer Share Classes which are denominated in or hedged into currencies other than the Base Currency of the Portfolio. Accordingly, the Reference Portfolio/Benchmark noted above may be denominated in or hedged into the relevant currency of a particular Share Class.

\*\*This expected range of leverage is not a limit and may vary over time as described in the Section 3 "Goldman Sachs – Calculation of Global Exposure and Expected Level of Leverage" of the Supplement. The actual levels may deviate from the stated range.

Given that many of the strategies used by the Portfolio are implemented through the use of financial derivative instruments, including those referred to in Section 3 "Goldman Sachs Funds - Calculation of Global Exposure and Expected Level of Leverage" of the Supplement, the expected level of leverage, as calculated under the gross sum of notionals exposures, may be relatively high. This is particularly emphasised in the Emerging Markets, currency and duration strategies which often involve the use of swaps (such as short term interest rate swaps, credit defaults swaps, total return swaps and equity swaps), futures contracts and forward currency contracts which may result in relatively higher levels of notional exposure. For further information on the use of financial derivative instruments and associated risks, please refer to Section 4 "Risk Considerations" and Appendix C "Derivatives and Efficient Portfolio Management Techniques" in the Prospectus. It also means that the expected level of leverage may exceed the stated range, particularly as a result of effecting certain investment exposures and also as a result of investor redemptions that can result in offsetting financial derivative instruments trades being placed which whilst they reduce investment exposure can increase leverage based on the gross sum of notionals calculation.

Shareholders should note that leverage resulting from the use of financial derivative instruments may result in magnified losses. However, the "Expected Level of Leverage" using the gross sum of notionals in the table above does not necessarily provide an appropriate illustration of the overall risk profile of the Portfolio as financial derivative instruments are used to manage risk as well as to seek return. This is largely due to the fact that the gross sum of notional exposure calculation simply aggregates the absolute sum of all long and short financial derivative instrument positions, even if the financial derivative instruments are for hedging or offsetting purposes. Further the gross sum of notionals calculation uses just notional values rather than measures that calculate the overall contributions to risk which will often explain why the leverage levels under this method appear high. By way of illustration, to achieve a

desired level of investment risk in interest rate markets, the amount of gross leverage used to achieve this risk will vary significantly depending on the underlying market risk (or 'duration') of the instrument chosen to implement this investment decision. For example, using an instrument with less duration risk - such as a shorter maturity interest rate derivative - requires more leverage to achieve the higher amount of required notional market exposure, compared to using a longer maturity instrument with higher duration risk. In this example, a 2 year maturity interest rate derivative would require approximately 4 times as much notional exposure compared to using a 10 year maturity instrument.

Please refer to Paragraph 1 "Investment Objective" and Paragraph 2 "Investment Policies" of this Appendix for further information on the relevant Portfolio's strategy and the Synthetic Risk and Reward Indicator (SRRI) in the KIID of the Portfolio for details on such Portfolio's historic risk profile where applicable. Further details on the average leverage levels, as calculated using the gross sum of notionals exposures, will be disclosed in the Fund's annual financial statements for the relevant accounting period.

#### **4. Principal Risks of the Portfolio**

Investing in the Portfolio implies (without limitation) the following risk factors which are listed in the same order as in the Prospectus:

- 4.2 Investment risks and in particular 4.2.9 Emerging Markets and 4.2.11 Investments in China
- 4.4 Investment in debt securities
- 4.6 Investment in derivatives
- 4.7 Other investments
- 4.9 Leverage and hedging
- 4.10 Currency risks
- 4.11 Currency hedging.

The Portfolio may be exposed to sustainability risks from time to time. A sustainability risk is defined in the EU Sustainable Finance Disclosure Regulation as an environmental, social or governance event or condition that could cause an actual or a potential material negative impact on the value of investments. The universe of sustainability events or conditions is very broad, and their relevance, materiality and impact on investments will depend on a number of factors such as the investment strategy pursued by the Portfolio, asset class, asset location and asset sector. Depending on the circumstances, examples of sustainability risks can include physical environmental risks, climate change transition risks, supply chain disruptions, improper labour practices, lack of board diversity and corruption. If they materialise, sustainability risks can reduce the value of underlying investments held within the Portfolio and could have a material impact on the performance and returns of the Portfolio.

The Investment Adviser does not operate a risk framework that is specifically tailored to sustainability risks. Rather relevant sustainability risks may be considered as part of the processes adopted by the Investment Adviser to monitor and manage general market risks. Accordingly, the Investment Adviser may integrate sustainability risks in its investment decision making process by having regard to material sustainability events that cause or are reasonably expected to cause broad disruption to economic growth, investor sentiment and asset flows in its ongoing assessment and monitoring of financial markets and the investment risk profile of the Portfolio.

The Investment Adviser may utilise proprietary and/or third-party tools and research to assess and monitor market risks that are relevant to the Portfolio.

Please refer to the relevant paragraphs of Section 4 "Risk Considerations" in the Prospectus which includes further relevant risk considerations.

#### **5. Portfolio Share Class Table**

The following table sets out the different Share Classes of the Portfolio and relevant fees and expenses. For further details on the Share Classes, please refer to Section 3 "Description of Share Classes" of the Prospectus.

| Base Currency:        | USD                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |              |                                               |                |                  |                                 |
|-----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|-----------------------------------------------|----------------|------------------|---------------------------------|
| Additional Notes:     | <p>Each type of Share Class listed may also be offered:</p> <p>(i) Denominated in or hedged into other currencies. For a list of available currencies and minimum investment amounts, please refer to Section 2 “Goldman Sachs Funds – Minimum Investment Amount Table” of the Supplement.</p> <p>With respect to Currency Hedged Share Classes, there may be two distinct types of currency hedged share classes available:</p> <p>(a) Share Classes which seek to hedge the base currency exposure of the Portfolio to the currency denomination of the Share Class. Such Share Classes will, using a EUR denominated class as an example, be denoted: “(EUR-Hedged)”, or</p> <p>(b) Share Classes which seek to only hedge the portfolio return in a given currency (and not the underlying currency exposures) back to the currency denomination of the Share Class. Note that some investors might not regard this as a currency hedged class at all as the currency transactions are not linked to the underlying currency exposures of the portfolio.</p> <p>For example, in the case of a EUR denominated class where the return to be hedged is the return in USD the Investment Adviser will, following a EUR subscription into the class, convert EUR to USD whilst entering into a USD/EUR currency forward transaction with the aim of creating a hedged exposure from USD back to EUR. <b>This means an investor in this Share Class will be exposed to the movement of the underlying portfolio currencies relative to USD rather than being exposed to the underlying portfolio currencies relative to EUR.</b> Such a Share Class is denoted: “(EUR) (Long EMD Ccy vs. USD)”.</p> <p><b>Such a Share Class would only be suitable for an investor who believes that the EUR will appreciate against the USD. If instead the USD appreciates against the EUR the Share Class will return less to the investor than if the investor had just invested in an unhedged class denominated in EUR.</b></p> <p>(ii) As accumulation or distribution classes. Please refer to Section 18 “Dividend Policy” of the Prospectus.</p> |              |                                               |                |                  |                                 |
| Share Class           | Share Class Currency                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Sales Charge | Contingent Deferred Sales Charge <sup>1</sup> | Management Fee | Distribution Fee | Operating Expenses <sup>2</sup> |

| Class IXO Shares      | USD                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Nil          | Nil                                           | N/A            | Nil              | Variable                        |

<sup>1</sup> A Contingent Deferred Sales Charge is imposed on Class C Shares. Please refer to Section 3 “Description of Share Classes” of the Prospectus for further information.

<sup>2</sup> The Portfolio pays transaction costs, including taxes and brokerage commissions, each time it buys and sells securities or instruments and may also pay Borrowing Costs. Shareholders should note that these costs are not reflected in the Portfolio’s operating expenses, but will be reflected in its performance.

## **6. Subscriptions, Redemptions and Exchanges**

Subject to the terms outlined in the Prospectus, subscriptions, redemptions and exchanges of Shares of the Portfolio may take place on any Business Day. The cut-off time for subscriptions, redemptions and exchanges of Shares of the Portfolio is 2:00 p.m. Central European time on the same Business Day.

## 6. Goldman Sachs Emerging Markets Debt Portfolio

### 1. Investment Objectives

The Goldman Sachs Emerging Markets Debt Portfolio (the “Portfolio”) seeks total returns consisting of income and capital appreciation by investing primarily in fixed income securities of Emerging Markets government and corporate issuers.

### 2. Investment Policies

The Portfolio will, under normal circumstances, invest at least two thirds of its net assets (excluding cash and cash-equivalents) in fixed income Transferable Securities issued by Emerging Markets governments or by companies that are domiciled in, or derive the predominant proportion of their revenues or profits from Emerging Markets.

The Investment Adviser implements a multi-faceted approach to Environmental, Social and Governance (ESG) considerations (“ESG Criteria”) into its fundamental investment process. Further details of the ESG characteristics of the Portfolio can be found in the Portfolio’s relevant Appendix in Supplement V of the Prospectus.

Fixed income Transferable Securities may include (without limitation) fixed and floating rate, senior and subordinated corporate debt obligations (such as bonds, debentures, notes and commercial paper), mortgage and asset-backed securities, collateralised debt and loan obligations, Money Market Instruments, Brady bonds and other debt issued by governments, their agencies and instrumentalities, or by central banks, convertible debt obligations (including CoCos), and reverse repurchase agreements.

The Portfolio may invest up to 30% of its net assets, or up to any other threshold as imposed from time to time by the Applicable Regulator, in PRC Debt Securities, including via Bond Connect and/or the CIBM Direct Access as applicable. Please refer to Paragraph 4.2.11 “Investments in China” of the Prospectus.

The Portfolio may invest up to 25% of its net assets in convertible debt obligations and up to 30 % of its net assets in debt instruments with loss-absorption features (“LAP”) which may be subject to contingent write-down or contingent conversion to ordinary shares on the occurrence of trigger event(s). Convertible debt obligations include CoCos. LAP instruments include, but are not limited to, CoCos, Tier 1 and Tier 2 capital instruments and senior non-preferred debts.

For further information on LAP and the associated risks, please refer to Paragraph 4.4.8 “Debt instruments with loss-absorption features” of the Prospectus and for further information on CoCos and the associated risks, please refer to Paragraph 4.4.15 “Contingent Capital Securities (CoCos)” of the Prospectus.

The Portfolio may invest up to 10% of its net assets in equity and/or equity related Transferable Securities. Please note that this limit does not apply to investment in preferred stock.

The Portfolio may invest up to 10% of its net assets in Permitted Funds.

The Portfolio may invest in excess of 20% of its net assets in mortgage and asset-backed securities either directly or indirectly via a financial index, including but not limited to CMBX. The issuers of such mortgage and asset-backed securities may include but are not limited to government agencies and/or government sponsored enterprises and special purpose vehicles sponsored by banks.

The Portfolio may also use financial derivative instruments as part of its investment policy or for hedging purposes. These may include, but are not limited to, foreign currency forward contracts, futures, options (on interest rates, credit and currencies), swaps (including interest rate swaps, credit default swaps and total return swaps) and credit linked instruments. For further information on the use of financial derivative instruments and associated risks, please refer to Appendix C - “Derivatives and Efficient Portfolio Management Techniques” together with Section 4 “Risk Considerations” in the Prospectus.

Investors should be aware that the use of financial derivative instruments in the Portfolio may result in both net long and net short exposures in, amongst other things, interest rates, credit and currencies. For further information on the

investment techniques used by the Investment Adviser, please refer to Section 3 “Goldman Sachs Funds - Calculation of Global Exposure and Expected Level of Leverage” of the Supplement.

The Portfolio may also hold bank deposits at sight, such as cash held in current accounts with a bank accessible at any time. Such holdings may only temporarily exceed 20% of the net assets of the Portfolio under exceptionally unfavourable market conditions. Moreover, cash equivalents such as deposits, Money Market Instruments and money market funds may be used for the purpose of cash management and in case of unfavourable conditions, provided that the Investment Adviser considers this to be in the best interests of the Shareholders.

The Investment Adviser intends to engage in SFTR techniques on, amongst other things, equity securities, markets, interest rates, credit, currencies, commodity indices and other Permitted Investments in line with the exposures set out below (in each case as a percentage of net asset value).

| Type of transaction                                    | Under normal circumstances it is generally expected that the principal amount of such transactions would represent a proportion of the Portfolio's net asset value indicated below.* | Under normal circumstances it is generally expected that the principal amount of the Portfolio's assets that can be subject to the transaction may represent up to a maximum of the proportion of the Portfolio's net asset value indicated below. |

\*In certain circumstances this proportion may be higher.

### 3. Calculation of Global Exposure and Expected Level of Leverage

The table below sets out for this Portfolio the information mentioned in Section 3 “Goldman Sachs Funds – Calculation of Global Exposure and Expected Level of Leverage” of the Supplement.

| Market Risk Calculation | Limit | Reference Portfolio/Benchmark*                                                 | Expected Level of Leverage                 |
|-------------------------|-------|--------------------------------------------------------------------------------|--------------------------------------------|
|                         |       |                                                                                | Gross Sum of Notionals<br>(Gross Exposure) |
| Relative VaR            | 2 x   | J.P. Morgan Emerging Market Bond Index Global Diversified (Total Return Gross) | 0%-600%**                                  |

\*The Portfolio is actively managed and is not designed to track its Reference Portfolio/Benchmark. Therefore the performance of the Portfolio and the Reference Portfolio/Benchmark may deviate. The Portfolio may offer Share Classes which are denominated in or hedged into currencies other than the Base Currency of the Portfolio. Accordingly, the Reference Portfolio/Benchmark noted above may be denominated in or hedged into the relevant currency of a particular Share Class.

\*\*This expected range of leverage is not a limit and may vary over time particularly as described in the Section 3 “Goldman Sachs – Calculation of Global Exposure and Expected Level of Leverage” of the Supplement. The actual levels may deviate from the stated range.

Given that many of the strategies used by the Portfolio are implemented through the use of financial derivative instruments, including those referred to in Section 3 “Goldman Sachs Funds - Calculation of Global Exposure and Expected Level of Leverage” of the Supplement, the expected level of leverage, as calculated under the gross sum of notionals exposures, may be relatively high. This is particularly emphasised in the Emerging Markets, currency and duration strategies which often involve the use of swaps, (such as short term interest rate swaps, credit default swaps, total return swaps or equity swaps), futures contracts and forward currency contracts which may result in relatively higher levels of notional exposure. For further information on the use of financial derivative instruments and associated risks, please refer to Section 4 “Risk Considerations” and Appendix C “Derivatives and Efficient Portfolio Management Techniques” in the Prospectus. It also means that the expected level of leverage may exceed the stated range, particularly as a result of effecting certain investment exposures and also as a result of investor redemptions that can result in offsetting financial derivative instruments trades being placed which whilst they reduce investment exposure can increase leverage based on the gross sum of notionals calculation.

Shareholders should note that leverage resulting from the use of financial derivative instruments may result in magnified losses. However, the “Expected Level of Leverage” using the gross sum of notionals in the table above does not necessarily provide an appropriate illustration of the overall risk profile of the Portfolio as financial derivative instruments are used to manage risk as well as to seek return. This is largely due to the fact that the gross sum of notional exposure calculation simply aggregates the absolute sum of all long and short financial derivative instrument positions, even if the financial derivative instruments are for hedging or offsetting purposes. Further the gross sum of notionals calculation uses just notional values rather than measures that calculate the overall contributions to risk which will often explain why the leverage levels under this method appear high. By way of illustration, to achieve a desired level of investment risk in interest rate markets, the amount of gross leverage used to achieve this risk will vary significantly depending on the underlying market risk (or ‘duration’) of the instrument chosen to implement this investment decision. For example, using an instrument with less duration risk - such as a shorter maturity interest rate derivative - requires more leverage to achieve the higher amount of required notional market exposure, compared to using a longer maturity instrument with higher duration risk. In this example, a 2 year maturity interest rate derivative would require approximately 4 times as much notional exposure compared to using a 10 year maturity instrument.

Please refer to Paragraph 1 “Investment Objective” and Paragraph 2 “Investment Policies” of this Appendix for further information on the relevant Portfolio’s strategy and the Synthetic Risk and Reward Indicator (SRRI) in the KIID of the Portfolio for details on such Portfolio’s historic risk profile where applicable. Further details on the average leverage levels, as calculated using the gross sum of notionals exposures, will be disclosed in the Fund’s annual financial statements for the relevant accounting period.

#### **4. Principal Risks of the Portfolio**

Investing in the Portfolio implies (without limitation) the following risk factors which are listed in the same order as in the Prospectus:

- 4.2 Investment risks and in particular 4.2.9 Emerging Markets and 4.2.11 Investments in China
- 4.4 Investment in debt securities
- 4.6 Investment in derivatives
- 4.7 Other investments
- 4.9 Leverage and hedging
- 4.10 Currency risks
- 4.11 Currency hedging

The Portfolio may be exposed to sustainability risks from time to time. A sustainability risk is defined in the EU Sustainable Finance Disclosure Regulation as an environmental, social or governance event or condition that could cause an actual or a potential material negative impact on the value of investments. The universe of sustainability events or conditions is very broad, and their relevance, materiality and impact on investments will depend on a number of factors such as the investment strategy pursued by the Portfolio, asset class, asset location and asset sector. Depending on the circumstances, examples of sustainability risks can include physical environmental risks, climate change transition risks, supply chain disruptions, improper labour practices, lack of board diversity and corruption. If they materialise, sustainability risks can reduce the value of underlying investments held within the Portfolio and could have a material impact on the performance and returns of the Portfolio.

The Investment Adviser does not operate a risk framework that is specifically tailored to sustainability risks. Rather relevant sustainability risks may be considered as part of the processes adopted by the Investment Adviser to monitor and manage general market risks. Accordingly, the Investment Adviser may integrate sustainability risks in its investment decision making process by having regard to material sustainability events that cause or are reasonably expected to cause broad disruption to economic growth, investor sentiment and asset flows in its ongoing assessment and monitoring of financial markets and the investment risk profile of the Portfolio.

The Investment Adviser may utilise proprietary and/or third-party tools and research to assess and monitor market risks that are relevant to the Portfolio.

Please refer to the relevant paragraphs of Section 4 “Risk Considerations” in the Prospectus which includes further relevant risk considerations.

## 5. Portfolio Share Class Table

The following table sets out the different Share Classes of the Portfolio and relevant fees and expenses. For further details on the Share Classes, please refer to Section 3 “Description of Share Classes” of the Prospectus.

| Base Currency:        | USD                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |              |                                               |                |                  |                          |                                 |                                |
|-----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|-----------------------------------------------|----------------|------------------|--------------------------|---------------------------------|--------------------------------|
| Additional Notes:     | <p>Each type of Share Class listed may also be offered:</p> <p>(i) Denominated in or hedged into other currencies. For a list of available currencies and minimum investment amounts, please refer to Section 2 “Goldman Sachs Funds – Minimum Investment Amount Table” of the Supplement.</p> <p>(ii) As accumulation or distribution classes. Please refer to Section 18 “Dividend Policy” of the Prospectus.</p> <p>(iii) As Duration Hedged Share Classes. Please refer to Paragraph 3.22 “Duration Hedged Share Classes” of the Prospectus and please note that since 30 July 2017 Duration Hedged Share Classes have been closed for subscriptions by new investors and as of 30 July 2018 Duration Hedged Share Classes will be closed for any subscriptions, including subscriptions by existing investors.</p> |              |                                               |                |                  |                          |                                 |                                |
| Share Class           | Share Class Currency                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Sales Charge | Contingent Deferred Sales Charge <sup>1</sup> | Management Fee | Distribution Fee | Shareholder Services Fee | Operating Expenses <sup>2</sup> | Redemption Charge <sup>3</sup> |

<sup>1</sup> A Contingent Deferred Sales Charge is imposed on Class B and Class C Shares. Please refer to Section 3 “Description of Share Classes” of the Prospectus for further information.

<sup>2</sup> The Portfolio pays transaction costs, including taxes and brokerage commissions, each time it buys and sells securities or instruments and may also pay Borrowing Costs. Shareholders should note that these costs are not reflected in the Portfolio’s operating expenses, but will be reflected in its performance.

<sup>3</sup> As described in Section 3 of the Prospectus, a Redemption Charge will only be payable on any redemption or exchange of “G” Shares within two years from the date of purchase.

## **6. Subscriptions, Redemptions and Exchanges**

Subject to the terms outlined in the Prospectus, subscriptions, redemptions and exchanges of Shares of the Portfolio may take place on any Business Day. The cut-off time for subscriptions, redemptions and exchanges of Shares of the Portfolio is 2:00 p.m. Central European time on the same Business Day.

## 7. Goldman Sachs Emerging Markets Short Duration Bond Portfolio

### 1. Investment Objectives

The Goldman Sachs Emerging Markets Short Duration Bond Portfolio (the “Portfolio”) seeks total returns consisting of income and capital appreciation by investing primarily in short duration fixed income securities of Emerging Markets government and corporate issuers.

### 2. Investment Policies

The Portfolio will, under normal circumstances, invest at least two thirds of its net assets (excluding cash and cash-equivalents) in short duration fixed income Transferable Securities issued by Emerging Markets governments or by companies that are domiciled in, or derive the predominant proportion of their revenues or profits from Emerging Markets.

The Investment Adviser implements a multi-faceted approach to Environmental, Social and Governance (ESG) considerations (“ESG Criteria”) into its fundamental investment process. Further details of the ESG characteristics of the Portfolio can be found in the Portfolio’s relevant Appendix in Supplement V of the Prospectus.

In addition to the above, the Portfolio may invest up to one third of its net assets in securitised debt, which are not subject to the ESG Criteria as set forth in the Portfolio’s relevant Appendix in Supplement V of the Prospectus.

Fixed income Transferable Securities may include (without limitation) fixed and floating rate, senior and subordinated corporate debt obligations (such as bonds, debentures, notes and commercial paper), mortgage and asset-backed securities, collateralised debt and loan obligations, Money Market Instruments, Brady bonds and other debt issued by governments, their agencies and instrumentalities, or by central banks, convertible debt obligations and reverse repurchase agreements.

The Portfolio will invest at least 75% of its net assets in fixed income Transferable Securities with a maximum final maturity of 5.5 years and maintain, under normal circumstances, a duration of three years or less.

The Portfolio may invest in PRC Debt Securities, including via Bond Connect and/or the CIBM Direct Access as applicable. Please refer to Paragraph 4.2.11 “Investments in China” of the Prospectus.

The Portfolio may invest up to 25% of its net assets in convertible debt obligations.

The Portfolio may invest up to 10% of its net assets in equity and/or equity related Transferable Securities. Please note that this limit does not apply to investment in preferred stock.

The Portfolio may invest up to 10% of its net assets in Permitted Funds.

The Portfolio may invest up to one third of its net assets in mortgage and asset-backed securities either directly or indirectly via a financial index, including but not limited to CMBX. The issuers of such mortgage and asset-backed securities may include but are not limited to government agencies and/or government sponsored enterprises and special purpose vehicles sponsored by banks. For further information on the use of mortgage and asset-backed securities and associated risks, please refer to Section 2.2 “Fixed Income Portfolios” together with Section 4 “Risk Considerations” in the Prospectus.

The Portfolio may also use financial derivative instruments as part of its investment policy or for hedging purposes. These may include, but are not limited to, foreign currency forward contracts, futures, options (on interest rates, credit and currencies), swaps (including interest rate swaps, credit default swaps and total return swaps) and credit linked instruments. For further information on the use of financial derivative instruments and associated risks, please refer to Appendix C - “Derivatives and Efficient Portfolio Management Techniques” together with Section 4 “Risk Considerations” in the Prospectus.

Investors should be aware that the use of financial derivative instruments in the Portfolio may result in both net long and net short exposures in, amongst other things, interest rates, credit and currencies. For further information on the

investment techniques used by the Investment Adviser, please refer to Section 3 “Goldman Sachs Funds - Calculation of Global Exposure and Expected Level of Leverage” of the Supplement.

The Portfolio may also hold bank deposits at sight, such as cash held in current accounts with a bank accessible at any time. Such holdings may only temporarily exceed 20% of the net assets of the Portfolio under exceptionally unfavourable market conditions. Moreover, cash equivalents such as deposits, Money Market Instruments and money market funds may be used for the purpose of cash management and in case of unfavourable conditions, provided that the Investment Adviser considers this to be in the best interests of the Shareholders.

The Investment Adviser intends to engage in SFTR techniques on, amongst other things, equity securities, markets, interest rates, credit, currencies, commodity indices and other Permitted Investments in line with the exposures set out below (in each case as a percentage of net asset value).

| Type of transaction                                    | Under normal circumstances it is generally expected that the principal amount of such transactions would represent a proportion of the Portfolio's net asset value indicated below.* | Under normal circumstances it is generally expected that the principal amount of the Portfolio's assets that can be subject to the transaction may represent up to a maximum of the proportion of the Portfolio's net asset value indicated below. |

| Securities lending transactions                        | 5%                                                                                                                                                                                   | 15%                                                                                                                                                                                                                                                |

\*In certain circumstances this proportion may be higher.

### 3. Additional Investment Restrictions

- The Portfolio may only invest into debt securities or other debt instruments that are customarily rated if at the time of purchase (a) debt securities or instruments have a minimum rating of B minus (by Standard & Poor's and Fitch) or B3 (by Moody's) or comparable ratings of other rating agencies recognised under EU Regulation (EC) No. 1060/2009 or a comparable internal rating by the Investment Adviser and (b) in case of asset-backed securities (including mortgage-backed securities) or credit-linked instruments, the relevant instruments at least have an Investment Grade rating.
- In the event of rating downgrades, which causes the security or instrument to be rated below the limits referred to above under (a) and (b), such securities or instruments may remain in the Portfolio provided their aggregate value does not exceed 3% of the net asset value of the Portfolio. If the aggregate value of securities or instruments downgraded below the aforementioned minimum ratings exceed 3% of the net asset value of the Portfolio, they will generally, absent any extraordinary circumstances, be sold within six months from the day on which the threshold of 3% was exceeded, however, only to the extent of the excess over 3%.
- Please note that certain un-rated securities, including for instance, agency mortgage-backed securities and issues from sovereign bond issuers will have the relevant country rating applied.
- In case of split ratings by recognised rating agencies, the lower of the two highest ratings must be used. Where the lower of the two highest ratings does not meet the requirements stated above, the Investment Adviser may instead decide to replace it with its own internal rating based on quantitative analysis, which may be higher.
- Similarly, where there is only one rating by a recognised rating agency and this does not meet the requirements stated above, the Investment Adviser may instead decide to replace it with its own internal rating based on quantitative analysis, which may be higher. The Portfolio will under no circumstances rely exclusively on external ratings in determining the credit risk of a financial instrument.
- Asset-backed securities and credit-linked instruments in the Portfolio will either be (i) traded on an organised market within the meaning of Article 4 no. 14 of Directive 2004/39/EC (MiFID) or on a non-EU exchange with an equivalent standard of regulation or (ii) be issued by an issuer domiciled in the EEA or an OECD full member state.
- The Portfolio will only invest in other Permitted Funds whose fund rules have equivalent restrictions in respect to the above rating requirements.
- In deviation from the above, the Portfolio may, at the time the investment restrictions in this section become effective, hold securities or instruments which neither at the time of their acquisition nor at the time the investment restrictions in this section become effective had/have the required minimum rating, provided their aggregate value does not exceed 3% of the net asset value of the Portfolio.

#### 4. Calculation of Global Exposure and Expected Level of Leverage

The table below sets out for this Portfolio the information mentioned in Section 3 “Goldman Sachs Funds – Calculation of Global Exposure and Expected Level of Leverage” of the Supplement.

| Market Risk Calculation | Limit | Reference Portfolio/Benchmark*            | Expected Level of Leverage                 |
|-------------------------|-------|-------------------------------------------|--------------------------------------------|
|                         |       |                                           | Gross Sum of Notionals<br>(Gross Exposure) |
| Absolute VaR            | 20 %  | ICE BofA 3 month US T-Bill <sup>(1)</sup> | 0%-400%**                                  |

<sup>(1)</sup> For performance reporting purposes, the Portfolio will use the ICE BofA 3 month US T-Bill as a reference benchmark. The Portfolio is actively managed and is not designed to track its Reference Portfolio/Benchmark.

\*Therefore the performance of the Portfolio and the Reference Portfolio/Benchmark may deviate. The Portfolio may offer Share Classes which are denominated in or hedged into currencies other than the Base Currency of the Portfolio. Accordingly, the Reference Portfolio/Benchmark noted above may be denominated in or hedged into the relevant currency of a particular Share Class.

\*\*This expected range of leverage is not a limit and may vary over time particularly as described in Section 3 “Goldman Sachs – Calculation of Global Exposure and Expected Level of Leverage” of the Supplement. The actual levels may deviate from the stated range.

#### 5. Principal Risks of the Portfolio

Investing in the Portfolio implies (without limitation) the following risk factors which are listed in the same order as in the Prospectus:

- 4.2 Investment risks and in particular 4.2.8 Sustainable Finance, 4.2.9 Emerging Markets and 4.2.11 Investments in China
- 4.4 Investment in debt securities
- 4.6 Investment in derivatives
- 4.7 Other investments
- 4.9 Leverage and hedging
- 4.10 Currency risks
- 4.11 Currency hedging

The Portfolio may be exposed to sustainability risks from time to time. A sustainability risk is defined in the EU Sustainable Finance Disclosure Regulation as an environmental, social or governance event or condition that could cause an actual or a potential material negative impact on the value of investments. The universe of sustainability events or conditions is very broad, and their relevance, materiality and impact on investments will depend on a number of factors such as the investment strategy pursued by the Portfolio, asset class, asset location and asset sector. Depending on the circumstances, examples of sustainability risks can include physical environmental risks, climate change transition risks, supply chain disruptions, improper labour practices, lack of board diversity and corruption. If they materialise, sustainability risks can reduce the value of underlying investments held within the Portfolio and could have a material impact on the performance and returns of the Portfolio.

The Investment Adviser may integrate sustainability risks in its investment decision making process through the consideration of certain environmental, social and governance matters which may include (without limitation) carbon intensity and emissions profiles, workplace health and safety and cyber risk, stakeholder relations, employee relations, board structure and management incentives.

Sustainability risks may be considered across the investment process as appropriate, by reference to the investment strategy and factors such as the asset classes and sectors within the Portfolio, alongside other factors to assess their potential impact on the quality of a particular investment. The Investment Adviser may utilise proprietary and/or third-party tools and research to assess and monitor sustainability risks that are relevant to the Portfolio, which may also be informed by the Investment Adviser's engagement with issuers.

Please refer to the relevant paragraphs of Section 4 “Risk Considerations” in the Prospectus which includes further relevant risk considerations.

**6. Portfolio Share Class Table**

The following table sets out the different Share Classes of the Portfolio and relevant fees and expenses. For further details on the Share Classes, please refer to Section 3 “Description of Share Classes” of the Prospectus.

| Base Currency:        | USD                                                                                                                                                                                                                                                                                                                                                                                                  |              |                                               |                |                  |                          |                                 |                                |
|-----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|-----------------------------------------------|----------------|------------------|--------------------------|---------------------------------|--------------------------------|
| Additional Notes:     | Each type of Share Class listed may also be offered:<br>(i) Denominated in or hedged into other currencies. For a list of available currencies and minimum investment amounts, please refer to Section 2 “Goldman Sachs Funds – Minimum Investment Amount Table” of the Supplement.<br>(ii) As accumulation or distribution classes. Please refer to Section 18 “Dividend Policy” of the Prospectus. |              |                                               |                |                  |                          |                                 |                                |
| Share Class           | Share Class Currency                                                                                                                                                                                                                                                                                                                                                                                 | Sales Charge | Contingent Deferred Sales Charge <sup>1</sup> | Management Fee | Distribution Fee | Shareholder Services Fee | Operating Expenses <sup>2</sup> | Redemption Charge <sup>3</sup> |
| Base Shares           | USD                                                                                                                                                                                                                                                                                                                                                                                                  | Up to 5.50 % | Nil                                           | Up to 1.25 %   | Nil              | Nil                      | Variable                        | Nil                            |
| Other Currency Shares | EUR                                                                                                                                                                                                                                                                                                                                                                                                  | Up to 5.50 % | Nil                                           | Up to 1.25 %   | Nil              | Nil                      | Variable                        | Nil                            |
| Class A Shares        | USD                                                                                                                                                                                                                                                                                                                                                                                                  | Up to 4.00 % | Nil                                           | Up to 1.25 %   | Up to 0.25 %     | Nil                      | Variable                        | Nil                            |
| Class B Shares        | USD                                                                                                                                                                                                                                                                                                                                                                                                  | Nil          | Up to 4.00 %                                  | Up to 1.25 %   | Up to 0.25 %     | 1.00 %                   | Variable                        | Nil                            |

<sup>1</sup> A Contingent Deferred Sales Charge is imposed on Class B and Class C Shares. Please refer to Section 3 “Description of Share Classes” of the Prospectus for further information.

<sup>2</sup> The Portfolio pays transaction costs, including taxes and brokerage commissions, each time it buys and sells securities or instruments and may also pay Borrowing Costs. Shareholders should note that these costs are not reflected in the Portfolio’s operating expenses, but will be reflected in its performance.

<sup>3</sup> As described in Section 3 of the Prospectus, a Redemption Charge will only be payable on any redemption or exchange of “G” Shares within two years from the date of purchase.

**7. Subscriptions, Redemptions and Exchanges**

Subject to the terms outlined in the Prospectus, subscriptions, redemptions and exchanges of Shares of the Portfolio may take place on any Business Day. The cut-off time for subscriptions, redemptions and exchanges of Shares of the Portfolio is 2:00 p.m. Central European time on the same Business Day.

## 8. Goldman Sachs Euro Short Duration Bond Plus Portfolio

### 1. Investment Objective

The Goldman Sachs Euro Short Duration Bond Plus Portfolio (the “Portfolio”) seeks total returns consisting of income and capital appreciation by investing primarily in Investment Grade short duration fixed income securities denominated in Euro.

### 2. Investment Policies

The Portfolio will, under normal circumstances, invest at least 80% of its net assets (excluding cash and cash-equivalents) in Investment Grade (at the time of purchase) short-term fixed income Transferable Securities. At least two thirds of the Portfolio’s net assets will be denominated in Euros.

The Investment Adviser implements a multi-faceted approach to Environmental, Social and Governance (ESG) considerations (“ESG Criteria”) into its fundamental investment process. Further details of the ESG characteristics of the Portfolio can be found in the Portfolio’s relevant Appendix in Supplement V of the Prospectus.

In addition to the above, the Portfolio may invest up to one third of its net assets in securitised debt, which are not subject to the ESG Criteria as set forth in the Portfolio’s relevant Appendix in Supplement V of the Prospectus.

Fixed income Transferable Securities may include (without limitation) fixed and floating rate, senior and subordinated corporate debt obligations (such as bonds, debentures, notes and commercial paper), mortgage and asset-backed securities, collateralised debt and loan obligations, Money Market Instruments, debt issued by governments, their agencies and instrumentalities, or by central banks, and reverse repurchase agreements.

The Portfolio will maintain, under normal circumstances, an average duration of three years or less.

The Portfolio will not invest in equity and/or equity related Transferable Securities.

The Portfolio may invest up to 10% of its net assets in Permitted Funds.

The Portfolio may invest up to one third of its net assets in mortgage and asset-backed securities either directly or indirectly via a financial index, including but not limited to CMBX. The issuers of such mortgage and asset-backed securities may include but are not limited to government agencies and/or government sponsored enterprises and special purpose vehicles sponsored by banks.

The Portfolio may also use financial derivative instruments as part of its investment policy or for hedging purposes. These may include, but are not limited to, foreign currency forward contracts, futures, options (on interest rates, credit and currencies), swaps (including interest rate swaps, credit default swaps and total return swaps) and credit linked instruments. For further information on the use of financial derivative instruments and associated risks, please refer to Appendix C - “Derivatives and Efficient Portfolio Management Techniques” together with Section 4 “Risk Considerations” in the Prospectus.

Investors should be aware that the use of financial derivative instruments in the Portfolio may result in both net long and net short exposures in, amongst other things, interest rates, credit and currencies. For further information on the investment techniques used by the Investment Adviser, please refer to Section 3 “Goldman Sachs Funds - Calculation of Global Exposure and Expected Level of Leverage” of the Supplement.

The Portfolio may also hold bank deposits at sight, such as cash held in current accounts with a bank accessible at any time. Such holdings may only temporarily exceed 20% of the net assets of the Portfolio under exceptionally unfavourable market conditions. Moreover, cash equivalents such as deposits, Money Market Instruments and money market funds may be used for the purpose of cash management and in case of unfavourable conditions, provided that the Investment Adviser considers this to be in the best interests of the Shareholders.

The Investment Adviser intends to engage in SFTR techniques on, amongst other things, equity securities, markets, interest rates, credit, currencies, commodity indices and other Permitted Investments in line with the exposures set out below (in each case as a percentage of net asset value).

| Type of transaction                                    | Under normal circumstances it is generally expected that the principal amount of such transactions would represent a proportion of the Portfolio's net asset value indicated below.* | Under normal circumstances it is generally expected that the principal amount of the Portfolio's assets that can be subject to the transaction may represent up to a maximum of the proportion of the Portfolio's net asset value indicated below. |
|--------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Total return swaps                                     | 0%                                                                                                                                                                                   | 50%                                                                                                                                                                                                                                                |
| Repurchase, including reverse repurchase, transactions | 10%                                                                                                                                                                                  | 50%                                                                                                                                                                                                                                                |
| Securities lending transactions                        | 0%                                                                                                                                                                                   | 15%                                                                                                                                                                                                                                                |

\*In certain circumstances this proportion may be higher.

### 3. Calculation of Global Exposure and Expected Level of Leverage

The table below sets out for this Portfolio the information mentioned in Section 3 "Goldman Sachs Funds – Calculation of Global Exposure and Expected Level of Leverage" of the Supplement.

| Market Risk Calculation | Limit | Reference Portfolio/Benchmark*                                             | Expected Level of Leverage                 |
|-------------------------|-------|----------------------------------------------------------------------------|--------------------------------------------|
|                         |       |                                                                            | Gross Sum of Notionals<br>(Gross Exposure) |
| Absolute VaR            | 20%   | Bloomberg Euro Aggregate 500mm 1-3 yrs (Total Return Gross) <sup>(1)</sup> | 100%-600%**                                |

(1) For performance reporting purposes, the Portfolio will use the Bloomberg Euro Aggregate 500mm 1-3 yrs as a reference benchmark.

\*The Portfolio is actively managed and is not designed to track its Reference Portfolio/Benchmark. Therefore the performance of the Portfolio and the Reference Portfolio/Benchmark may deviate. The Portfolio may offer Share Classes which are denominated in or hedged into currencies other than the Base Currency of the Portfolio. Accordingly, the Reference Portfolio/Benchmark noted above may be denominated in or hedged into the relevant currency of a particular Share Class.

\*\*This expected range of leverage is not a limit and may vary over time as described in the Section 3 "Goldman Sachs – Calculation of Global Exposure and Expected Level of Leverage" of the Supplement. The actual levels may deviate from the stated range.

Given that many of the strategies used by the Portfolio are implemented through the use of financial derivative instruments, including those referred to in Section 3 "Goldman Sachs Funds - Calculation of Global Exposure and Expected Level of Leverage" of the Supplement, the expected level of leverage, as calculated under the gross sum of notionals exposures, may be relatively high. Pursuit of the investment objective may involve the use of swaps (such as short term interest rate swaps, credit default swaps, total return swaps or equity swaps), options, futures and forward currency contracts, which may result in relatively higher levels of notional exposure. For further information on the use of financial derivative instruments and associated risks, please refer to Section 4 "Risk Considerations" and Appendix C "Derivatives and Efficient Portfolio Management Techniques" in the Prospectus. It also means that the expected level of leverage may exceed the stated range, particularly as a result of effecting certain investment exposures and also as a result of investor redemptions that can result in offsetting financial derivative instruments trades being placed which whilst they reduce investment exposure can increase leverage based on the gross sum of notionals calculation.

Shareholders should note that leverage resulting from the use of financial derivative instruments may result in magnified losses. However, the "Expected Level of Leverage" using the gross sum of notionals in the table above does not necessarily provide an appropriate illustration of the overall risk profile of the Portfolio as financial derivative instruments are used to manage risk as well as to seek return. This is largely due to the fact that the gross sum of notional exposure calculation simply aggregates the absolute sum of all long and short financial derivative instrument positions, even if the financial derivative instruments are for hedging or offsetting purposes. Further the gross sum of notionals calculation uses just notional values rather than measures that calculate the overall contributions to risk which will often explain why the leverage levels under this method appear high. By way of illustration, to achieve a desired level of investment risk in interest rate markets, the amount of gross leverage used to achieve this risk will

vary significantly depending on the underlying market risk (or 'duration') of the instrument chosen to implement this investment decision. For example, using an instrument with less duration risk - such as a shorter maturity interest rate derivative - requires more leverage to achieve the higher amount of required notional market exposure, compared to using a longer maturity instrument with higher duration risk. In this example, a 2 year maturity interest rate derivative would require approximately 4 times as much notional exposure compared to using a 10 year maturity instrument.

Please refer to Paragraph 1 "Investment Objective" and Paragraph 2 "Investment Policies" of this Appendix for further information on the relevant Portfolio's strategy and the Synthetic Risk and Reward Indicator (SRRI) in the KIID of the Portfolio for details on such Portfolio's historic risk profile where applicable. Further details on the average leverage levels, as calculated using the gross sum of notionals exposures, will be disclosed in the Fund's annual financial statements for the relevant accounting period.

#### **4. Principal Risks of the Portfolio**

Investing in the Portfolio implies (without limitation) the following risk factors which are listed in the same order as in the Prospectus:

- 4.2 Investment risks and in particular 4.2.8 Sustainable Finance
- 4.4 Investment in debt securities
- 4.6 Investment in derivatives
- 4.7 Other investments
- 4.9 Leverage and hedging
- 4.10 Currency risks
- 4.11 Currency hedging.

The Portfolio may be exposed to sustainability risks from time to time. A sustainability risk is defined in the EU Sustainable Finance Disclosure Regulation as an environmental, social or governance event or condition that could cause an actual or a potential material negative impact on the value of investments. The universe of sustainability events or conditions is very broad, and their relevance, materiality and impact on investments will depend on a number of factors such as the investment strategy pursued by the Portfolio, asset class, asset location and asset sector. Depending on the circumstances, examples of sustainability risks can include physical environmental risks, climate change transition risks, supply chain disruptions, improper labour practices, lack of board diversity and corruption. If they materialise, sustainability risks can reduce the value of underlying investments held within the Portfolio and could have a material impact on the performance and returns of the Portfolio.

The Investment Adviser does not operate a risk framework that is specifically tailored to sustainability risks. Rather relevant sustainability risks may be considered as part of the processes adopted by the Investment Adviser to monitor and manage general market risks within the Portfolio. Accordingly, the Investment Adviser may integrate sustainability risks in its investment decision making process by taking account of material sustainability events that cause or are reasonably expected to cause broad disruption to economic growth, investor sentiment and asset flows in its ongoing assessment and monitoring of financial markets and the investment risk profile of the Portfolio.

The Investment Adviser may utilise proprietary and/or third-party tools and research to assess and monitor market risks that are relevant to the Portfolio.

Please refer to the relevant paragraphs of Section 4 "Risk Considerations" in the Prospectus which includes further relevant risk considerations.

#### **5. Portfolio Share Class Table**

The following table sets out the different Share Classes of the Portfolio and relevant fees and expenses. For further details on the Share Classes, please refer to Section 3 "Description of Share Classes" of the Prospectus.

| Base Currency:        | EUR                                                                                                                                                                                                                                                                                                                                                                                                                                    |              |                                               |                |                  |                                 |
|-----------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|-----------------------------------------------|----------------|------------------|---------------------------------|
| Additional Notes:     | <p>Each type of Share Class listed in the table below may also be offered:</p> <p>(i) Denominated in or hedged into other currencies. For a list of available currencies and minimum investment amounts, please refer to Section 2 “Goldman Sachs Funds – Minimum Investment Amount Table” of the Supplement.</p> <p>(ii) As accumulation or distribution classes. Please refer to Section 18 “Dividend Policy” of the Prospectus.</p> |              |                                               |                |                  |                                 |
| Share Class           | Share Class Currency                                                                                                                                                                                                                                                                                                                                                                                                                   | Sales Charge | Contingent Deferred Sales Charge <sup>1</sup> | Management Fee | Distribution Fee | Operating Expenses <sup>2</sup> |
| Base Shares           | EUR                                                                                                                                                                                                                                                                                                                                                                                                                                    | Up to 5.50 % | Nil                                           | 0.50 %         | Nil              | Variable                        |
| Other Currency Shares | USD                                                                                                                                                                                                                                                                                                                                                                                                                                    | Up to 5.50 % | Nil                                           | Up to 0.50 %   | Nil              | Variable                        |
| Class A Shares        | EUR                                                                                                                                                                                                                                                                                                                                                                                                                                    | Up to 4.00 % | Nil                                           | Up to 0.50 %   | Up to 0.50 %     | Variable                        |
| Class C Shares        | EUR                                                                                                                                                                                                                                                                                                                                                                                                                                    | Nil          | Up to 1.00 %                                  | Up to 0.80 %   | Up to 1.00 %     | Variable                        |

<sup>1</sup> A Contingent Deferred Sales Charge is imposed on Class C Shares. Please refer to Section 3 “Description of Share Classes” of the Prospectus for further information.

<sup>2</sup> The Portfolio pays transaction costs, including taxes and brokerage commissions, each time it buys and sells securities or instruments and may also pay Borrowing Costs. Shareholders should note that these costs are not reflected in the Portfolio’s operating expenses, but will be reflected in its performance.

## 6. Subscriptions, Redemptions and Exchanges

Subject to the terms outlined in the Prospectus, subscriptions, redemptions and exchanges of Shares of the Portfolio may take place on any Business Day. The cut-off time for subscriptions, redemptions and exchanges of Shares of the Portfolio is 2:00 p.m. Central European time on the same Business Day.

## 9. Goldman Sachs Europe High Yield Bond Portfolio

### 1. Investment Objective

The Goldman Sachs Europe High Yield Bond Portfolio (the “Portfolio”) seeks total returns consisting of income and capital appreciation by investing primarily in below Investment Grade fixed income securities issued by European companies.

### 2. Investment Policies

The Portfolio will, under normal circumstances, invest at least two thirds of its net assets (excluding cash and cash-equivalents) in below Investment Grade fixed income Transferable Securities issued by companies that are domiciled in, or which derive the predominant proportion of their revenues or profits from Europe.

The Investment Adviser implements a multi-faceted approach to Environmental, Social and Governance (ESG) considerations (“ESG Criteria”) into its fundamental investment process. Further details of the ESG characteristics of the Portfolio can be found in the Portfolio’s relevant Appendix in Supplement V of the Prospectus.

In addition to the above, the Portfolio may invest up to one third of its net assets in securitised debt, which are not subject to the ESG Criteria as set forth in the Portfolio’s relevant Appendix in Supplement V of the Prospectus.

Fixed income Transferable Securities may include (without limitation) fixed and floating rate, senior and subordinated corporate debt obligations (such as bonds, debentures, notes and commercial paper), mortgage and asset-backed securities, collateralised debt and loan obligations, Money Market Instruments, Brady bonds and other debt issued by governments, their agencies and instrumentalities, or by central banks, convertible debt obligations (including CoCos), and reverse repurchase agreements.

The Portfolio may invest up to 25% of its net assets in convertible debt obligations, including CoCos. For further information on CoCos and the associated risks, please refer to Paragraph 4.4.15 “Contingent Capital Securities (CoCos)” of the Prospectus.

The Portfolio may invest up to 10% of its net assets in equity and/or equity related Transferable Securities. Please note that this limit does not apply to investment in preferred stock.

The Portfolio may invest up to 10% of its net assets in Permitted Funds.

The Portfolio may invest up to one third of its net assets in mortgage and asset-backed securities either directly or indirectly via a financial index, including but not limited to CMBX. The issuers of such mortgage and asset-backed securities may include but are not limited to government agencies and/or government sponsored enterprises and special purpose vehicles sponsored by banks.

The Portfolio may also use financial derivative instruments as part of its investment policy or for hedging purposes. These may include, but are not limited to, foreign currency forward contracts, futures, options (on interest rates, credit and currencies), swaps (including interest rate swaps, credit default swaps and total return swaps) and credit linked instruments. For further information on the use of financial derivative instruments and associated risks, please refer to Appendix C - “Derivatives and Efficient Portfolio Management Techniques” together with Section 4 “Risk Considerations” in the Prospectus.

Investors should be aware that the use of financial derivative instruments in the Portfolio may result in both net long and net short exposures in, amongst other things, interest rates, credit and currencies. For further information on the investment techniques used by the Investment Adviser, please refer to Section 3 “Goldman Sachs Funds - Calculation of Global Exposure and Expected Level of Leverage” of the Supplement.

The Portfolio may also hold bank deposits at sight, such as cash held in current accounts with a bank accessible at any time. Such holdings may only temporarily exceed 20% of the net assets of the Portfolio under exceptionally unfavourable market conditions. Moreover, cash equivalents such as deposits, Money Market Instruments and

money market funds may be used for the purpose of cash management and in case of unfavourable conditions, provided that the Investment Adviser considers this to be in the best interests of the Shareholders.

The Investment Adviser intends to engage in SFTR techniques on, amongst other things, equity securities, markets, interest rates, credit, currencies, commodity indices and other Permitted Investments in line with the exposures set out below (in each case as a percentage of net asset value).

| Type of transaction                                    | Under normal circumstances it is generally expected that the principal amount of such transactions would represent a proportion of the Portfolio's net asset value indicated below.* | Under normal circumstances it is generally expected that the principal amount of the Portfolio's assets that can be subject to the transaction may represent up to a maximum of the proportion of the Portfolio's net asset value indicated below. |

| Securities lending transactions                        | 0%                                                                                                                                                                                   | 15%                                                                                                                                                                                                                                                |

\*In certain circumstances this proportion may be higher.

### 3. Calculation of Global Exposure and Expected Level of Leverage

The table below sets out for this Portfolio the information mentioned in Section 3 "Goldman Sachs Funds – Calculation of Global Exposure and Expected Level of Leverage" of the Supplement.

| Market Risk Calculation | Limit | Reference Portfolio/Benchmark*                                                            | Expected Level of Leverage                 |
|-------------------------|-------|-------------------------------------------------------------------------------------------|--------------------------------------------|
|                         |       |                                                                                           | Gross Sum of Notionals<br>(Gross Exposure) |
| Relative VaR            | 2 x   | ICE BofA European Currency High Yield Constrained Index (Total Return Gross) (EUR-Hedged) | 0%-200%**                                  |

\*The Portfolio is actively managed and is not designed to track its Reference Portfolio/Benchmark. Therefore the performance of the Portfolio and the Reference Portfolio/Benchmark may deviate. The Portfolio may offer Share Classes which are denominated in or hedged into currencies other than the Base Currency of the Portfolio. Accordingly, the Reference Portfolio/Benchmark noted above may be denominated in or hedged into the relevant currency of a particular Share Class.

\*\*This expected range of leverage is not a limit and may vary over time as described in the Section 3 "Goldman Sachs – Calculation of Global Exposure and Expected Level of Leverage" of the Supplement. The actual levels may deviate from the stated range.

### 4. Principal Risks of the Portfolio

Investing in the Portfolio implies (without limitation) the following risk factors which are listed in the same order as in the Prospectus:

- 4.2 Investment risks and in particular 4.2.8 Sustainable Finance
- 4.4 Investment in debt securities
- 4.6 Investment in derivatives
- 4.7 Other investments
- 4.9 Leverage and hedging
- 4.10 Currency risks
- 4.11 Currency hedging.

The Portfolio may be exposed to sustainability risks from time to time. A sustainability risk is defined in the EU Sustainable Finance Disclosure Regulation as an environmental, social or governance event or condition that could cause an actual or a potential material negative impact on the value of investments. The universe of sustainability events or conditions is very broad, and their relevance, materiality and impact on investments will depend on a number of factors such as the investment strategy pursued by the Portfolio, asset class, asset location and asset sector. Depending on the circumstances, examples of sustainability risks can include physical environmental risks, climate change transition risks, supply chain disruptions, improper labour practices, lack of board diversity and

corruption. If they materialise, sustainability risks can reduce the value of underlying investments held within the Portfolio and could have a material impact on the performance and returns of the Portfolio.

The Investment Adviser may integrate sustainability risks in its investment decision making process through the consideration of certain environmental, social and governance matters which may include (without limitation) carbon intensity and emissions profiles, workplace health and safety and cyber risk, stakeholder relations, employee relations, board structure and management incentives.

Sustainability risks may be considered across the investment process as appropriate, by reference to the investment strategy and factors such as the asset classes and sectors within the Portfolio, alongside other factors to assess their potential impact on the quality of a particular investment. The Investment Adviser may utilise proprietary and/or third-party tools and research to assess and monitor sustainability risks that are relevant to the Portfolio, which may also be informed by the Investment Adviser's engagement with issuers.

Please refer to the relevant paragraphs of Section 4 "Risk Considerations" in the Prospectus which includes further relevant risk considerations.

## 5. Portfolio Share Class Table

The following table sets out the different Share Classes of the Portfolio and relevant fees and expenses. For further details on the Share Classes, please refer to Section 3 "Description of Share Classes" of the Prospectus.

| Base Currency:        | EUR                                                                                                                                                                                                                                                                                                                                                                                                                                    |              |                                               |                |                  |                                 |
|-----------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|-----------------------------------------------|----------------|------------------|---------------------------------|
| Additional Notes:     | <p>Each type of Share Class listed in the table below may also be offered:</p> <p>(i) Denominated in or hedged into other currencies. For a list of available currencies and minimum investment amounts, please refer to Section 2 "Goldman Sachs Funds – Minimum Investment Amount Table" of the Supplement.</p> <p>(ii) As accumulation or distribution classes. Please refer to Section 18 "Dividend Policy" of the Prospectus.</p> |              |                                               |                |                  |                                 |
| Share Class           | Share Class Currency                                                                                                                                                                                                                                                                                                                                                                                                                   | Sales Charge | Contingent Deferred Sales Charge <sup>1</sup> | Management Fee | Distribution Fee | Operating Expenses <sup>2</sup> |
| Base Shares           | EUR                                                                                                                                                                                                                                                                                                                                                                                                                                    | Up to 5.50 % | Nil                                           | 1.00 %         | Nil              | Variable                        |
| Other Currency Shares | USD                                                                                                                                                                                                                                                                                                                                                                                                                                    | Up to 5.50 % | Nil                                           | 1.00 %         | Nil              | Variable                        |
| Class A Shares        | EUR                                                                                                                                                                                                                                                                                                                                                                                                                                    | Up to 4.00 % | Nil                                           | 1.00 %         | 0.25 %           | Variable                        |

<sup>1</sup> A Contingent Deferred Sales Charge is imposed on Class C Shares. Please refer to Section 3 “Description of Share Classes” of the Prospectus for further information.

<sup>2</sup> The Portfolio pays transaction costs, including taxes and brokerage commissions, each time it buys and sells securities or instruments and may also pay Borrowing Costs. Shareholders should note that these costs are not reflected in the Portfolio’s operating expenses, but will be reflected in its performance.

## 6. Subscriptions, Redemptions and Exchanges

Subject to the terms outlined in the Prospectus, subscriptions, redemptions and exchanges of Shares of the Portfolio may take place on any Business Day. The cut-off time for subscriptions, redemptions and exchanges of Shares of the Portfolio is 2:00 p.m. Central European time on the same Business Day.

## 10. Goldman Sachs Global Income Bond Portfolio

### 1. Investment Objective

The Goldman Sachs Global Income Bond Portfolio seeks total returns consisting of predominantly income with the potential for capital appreciation by investing primarily in fixed income securities of government, corporate issuers and securitised debt around the world.

### 2. Investment Policies

The Portfolio will, under normal circumstances, invest at least two thirds of its net assets (excluding cash and cash-equivalents) in fixed income Transferable Securities issued by governments and companies around the world.

The Investment Adviser implements a multi-faceted approach to Environmental, Social and Governance (ESG) considerations ("ESG Criteria") into its fundamental investment process. Further details of the ESG characteristics of the Portfolio can be found in the Portfolio's relevant Appendix in Supplement V of the Prospectus.

In addition to the above, the Portfolio may invest up to 30% of its net assets in securitised debt, which are not subject to the ESG Criteria as set forth in the Portfolio's relevant Appendix in Supplement V of the Prospectus.

Fixed income Transferable Securities may include (without limitation) fixed and floating rate, senior and subordinated corporate debt obligations (such as bonds, debentures, notes and commercial paper), mortgage and asset-backed securities, collateralised debt and loan obligations, Money Market Instruments, Brady bonds and other debt issued by governments, their agencies and instrumentalities, or by central banks, convertible debt obligations (including CoCos), and reverse repurchase agreements. Investment in non-agency securities and collateralised debt and loan obligations may not exceed 20%.

The Portfolio may invest up to 30% of its net assets, or up to any other threshold as imposed from time to time by the Applicable Regulator, in PRC Debt Securities, including via Bond Connect and/or the CIBM Direct Access as applicable. Please refer to Paragraph 4.2.11 "Investments in China" of the Prospectus.

The Portfolio may invest up to 25% of its net assets in convertible debt obligations, including up to 10% in CoCos, and up to 30% of its net assets in debt instruments with loss-absorption features (loss-absorption products or "LAP") which may be subject to contingent write-down or contingent conversion to ordinary shares on the occurrence of trigger event(s). Convertible debt obligations include CoCos. LAP instruments include, but are not limited to, CoCos, Tier 1 and Tier 2 capital instruments and senior non-preferred debts.

For further information on LAP and the associated risks, please refer to Paragraph 4.4.8 "Debt instruments with loss-absorption features" of the Prospectus and for further information on CoCos and the associated risks, please refer to Paragraph 4.4.15 "Contingent Capital Securities (CoCos)" of the Prospectus.

The Portfolio will not invest in equity and/or equity related Transferable Securities, with the exception of (i) shares in other Permitted Funds which do not invest in equity securities, (ii) securities received as part of restructuring or similar event and (iii) preferred stock.

The Portfolio may invest up to 10% of its net assets in Permitted Funds.

The Portfolio may invest up to 30% of its net assets in mortgage and asset-backed securities (with a maximum of 20% in non-agency securities) either directly or indirectly via a financial index, including but not limited to CMBX. The issuers of such mortgage and asset-backed securities may include but are not limited to government agencies and/or government sponsored enterprises and special purpose vehicles sponsored by banks.

The Portfolio may also use financial derivative instruments as part of its investment policy or for hedging purposes. These may include, but are not limited to, foreign currency forward contracts, futures, options (on interest rates, credit and currencies), swaps (including interest rate swaps, credit default swaps and total return swaps) and credit linked instruments. For further information on the use of financial derivative instruments and associated risks, please refer

to Appendix C - “Derivatives and Efficient Portfolio Management Techniques” together with Section 4 “Risk Considerations” in the Prospectus.

Investors should be aware that the use of financial derivative instruments in the Portfolio may result in both net long and net short exposures in, amongst other things, interest rates, credit and currencies. For further information on the investment techniques used by the Investment Adviser, please refer to Section 3 “Goldman Sachs Funds - Calculation of Global Exposure and Expected Level of Leverage” of the Supplement.

The Portfolio may also hold bank deposits at sight, such as cash held in current accounts with a bank accessible at any time. Such holdings may only temporarily exceed 20% of the net assets of the Portfolio under exceptionally unfavourable market conditions. Moreover, cash equivalents such as deposits, Money Market Instruments and money market funds may be used for the purpose of cash management and in case of unfavourable conditions, provided that the Investment Adviser considers this to be in the best interests of the Shareholders.

The Investment Adviser intends to engage in SFTR techniques on, amongst other things, equity securities, markets, interest rates, credit, currencies, commodity indices and other Permitted Investments in line with the exposures set out below (in each case as a percentage of net asset value).

| Type of transaction                                    | Under normal circumstances it is generally expected that the principal amount of such transactions would represent a proportion of the Portfolio's net asset value indicated below.* | Under normal circumstances it is generally expected that the principal amount of the Portfolio's assets that can be subject to the transaction may represent up to a maximum of the proportion of the Portfolio's net asset value indicated below. |

| Securities lending transactions                        | 5%                                                                                                                                                                                   | 15%                                                                                                                                                                                                                                                |

\*In certain circumstances this proportion may be higher.

### 3. Calculation of Global Exposure and Expected Level of Leverage

The table below sets out for this Portfolio the information mentioned in Section 3 “Goldman Sachs Funds – Calculation of Global Exposure and Expected Level of Leverage” of the Supplement.

| Market Risk Calculation | Limit | Reference Portfolio/Benchmark*                                                  | Expected Level of Leverage                 |
|-------------------------|-------|---------------------------------------------------------------------------------|--------------------------------------------|
|                         |       |                                                                                 | Gross Sum of Notionals<br>(Gross Exposure) |
| Absolute VaR            | 20%   | Bloomberg Global Aggregate Index (Total Return Gross) (USD Hedged) <sup>1</sup> | 0%-300%**                                  |

(1) For performance reporting purposes, the Portfolio will use the Bloomberg Global Aggregate Index as a reference benchmark.

\*The Portfolio is actively managed and is not designed to track its Reference Portfolio/Benchmark. Therefore the performance of the Portfolio and the Reference Portfolio/Benchmark may deviate. The Portfolio may offer Share Classes which are denominated in or hedged into currencies other than the Base Currency of the Portfolio. Accordingly, the Reference Portfolio/Benchmark noted above may be denominated in or hedged into the relevant currency of a particular Share Class.

\*\*This expected range of leverage is not a limit and may vary over time particularly as described in the Section 3 “Goldman Sachs – Calculation of Global Exposure and Expected Level of Leverage” of the Supplement. The actual levels may deviate from the stated range.

Given that many of the strategies used by the Portfolio are implemented through the use of financial derivative instruments, including those referred to in Section 3 “Goldman Sachs Funds - Calculation of Global Exposure and Expected Level of Leverage” of the Supplement, the expected level of leverage, as calculated under the gross sum of notionals exposures, may be relatively high. Pursuit of the investment objective may involve the use of swaps, (such as short term interest rate swaps, credit default swaps, total return swaps or equity swaps), futures contracts

and forward currency contracts which may result in relatively higher levels of notional exposure. For further information on the use of financial derivative instruments and associated risks, please refer to Section 4 “Risk Considerations” and Appendix C “Derivatives and Efficient Portfolio Management Techniques” in the Prospectus. It also means that the expected level of leverage may exceed the stated range, particularly as a result of effecting certain investment exposures and also as a result of investor redemptions that can result in offsetting financial derivative instruments trades being placed which whilst they reduce investment exposure can increase leverage based on the gross sum of notionals calculation.

Shareholders should note that leverage resulting from the use of financial derivative instruments may result in magnified losses. However, the “Expected Level of Leverage” using the gross sum of notionals in the table above does not necessarily provide an appropriate illustration of the overall risk profile of the Portfolio as financial derivative instruments are used to manage risk as well as to seek return. This is largely due to the fact that the gross sum of notional exposure calculation simply aggregates the absolute sum of all long and short financial derivative instrument positions, even if the financial derivative instruments are for hedging or offsetting purposes. Further the gross sum of notionals calculation uses just notional values rather than measures that calculate the overall contributions to risk which will often explain why the leverage levels under this method appear high. By way of illustration, to achieve a desired level of investment risk in interest rate markets, the amount of gross leverage used to achieve this risk will vary significantly depending on the underlying market risk (or ‘duration’) of the instrument chosen to implement this investment decision. For example, using an instrument with less duration risk - such as a shorter maturity interest rate derivative - requires more leverage to achieve the higher amount of required notional market exposure, compared to using a longer maturity instrument with higher duration risk. In this example, a 2 year maturity interest rate derivative would require approximately 4 times as much notional exposure compared to using a 10 year maturity instrument.

Please refer to Paragraph 1 “Investment Objective” and Paragraph 2 “Investment Policies” of this Appendix for further information on the relevant Portfolio’s strategy and the Synthetic Risk and Reward Indicator (SRRI) in the KIID of the Portfolio for details on such Portfolio’s historic risk profile where applicable. Further details on the average leverage levels, as calculated using the gross sum of notionals exposures, will be disclosed in the Fund’s annual financial statements for the relevant accounting period.

#### **4. Principal Risks of the Portfolio**

Investing in the Portfolio implies (without limitation) the following risk factors which are listed in the same order as in the Prospectus:

- 4.2 Investment risks and in particular 4.2.8 Sustainable Finance, 4.2.9 Emerging Markets and 4.2.11 Investments in China
- 4.4 Investment in debt securities and in particular 4.4.8 Debt instruments with loss-absorption features, 4.4.12 Asset-backed securities and 4.4.15 Contingent Capital Securities
- 4.6 Investment in derivatives
- 4.7 Other investments
- 4.9 Leverage and hedging
- 4.10 Currency risks
- 4.11 Currency hedging.

The Portfolio may be exposed to sustainability risks from time to time. A sustainability risk is defined in the EU Sustainable Finance Disclosure Regulation as an environmental, social or governance event or condition that could cause an actual or a potential material negative impact on the value of investments. The universe of sustainability events or conditions is very broad, and their relevance, materiality and impact on investments will depend on a number of factors such as the investment strategy pursued by the Portfolio, asset class, asset location and asset sector. Depending on the circumstances, examples of sustainability risks can include physical environmental risks, climate change transition risks, supply chain disruptions, improper labour practices, lack of board diversity and corruption. If they materialise, sustainability risks can reduce the value of underlying investments held within the Portfolio and could have a material impact on the performance and returns of the Portfolio.

The Investment Adviser may integrate sustainability risks in its investment decision making process through the consideration of certain environmental, social and governance matters which may include (without limitation) carbon intensity and emissions profiles, workplace health and safety and cyber risk, stakeholder relations, employee relations, board structure and management incentives.

Sustainability risks may be considered across the investment process as appropriate, by reference to the investment strategy and factors such as the asset classes and sectors within the Portfolio, alongside other factors to assess their potential impact on the quality of a particular investment. The Investment Adviser may utilise proprietary and/or third-party tools and research to assess and monitor sustainability risks that are relevant to the Portfolio, which may also be informed by the Investment Adviser's engagement with issuers.

Please refer to the relevant paragraphs of Section 4 "Risk Considerations" in the Prospectus which includes further relevant risk considerations.

## 5. Portfolio Share Class Table

The following table sets out the different Share Classes of the Portfolio and relevant fees and expenses. For further details on the Share Classes, please refer to Section 3 "Description of Share Classes" of the Prospectus.

|                          |                                                                                                                                                                                                                                                                                                                                                                                                                     |                     |                                                     |                       |                         |                                 |                                       |

<sup>1</sup> A Contingent Deferred Sales Charge is imposed on Class C Shares. Please refer to Section 3 “Description of Share Classes” of the Prospectus for further information.

<sup>2</sup> The Portfolio pays transaction costs, including taxes and brokerage commissions, each time it buys and sells securities or instruments and may also pay Borrowing Costs. Shareholders should note that these costs are not reflected in the Portfolio’s operating expenses, but will be reflected in its performance.

## **6. Subscriptions, Redemptions and Exchanges**

Subject to the terms outlined in the Prospectus, subscriptions, redemptions and exchanges of Shares of the Portfolio may take place on any Business Day. The cut-off time for subscriptions, redemptions and exchanges of Shares of the Portfolio is 2:00 p.m. Central European time on the same Business Day.

# 11. Goldman Sachs Global Credit Portfolio (Hedged)

## 1. Investment Objective

The Goldman Sachs Global Credit Portfolio (Hedged) (the “Portfolio”) seeks total returns consisting of income and capital appreciation by investing primarily in Investment Grade fixed income securities of corporate issuers.

## 2. Investment Policies

The Portfolio will, under normal circumstances, invest at least two thirds of its net assets (excluding cash and cash-equivalents) in Investment Grade fixed income Transferable Securities of corporate issuers that are domiciled anywhere in the world.

The Investment Adviser will generally seek to hedge the Portfolio’s currency exposure back to US Dollar, however it may also take active investment currency decisions to generate return.

The Investment Adviser implements a multi-faceted approach to Environmental, Social and Governance (ESG) considerations (“ESG Criteria”) into its fundamental investment process. Further details of the ESG characteristics of the Portfolio can be found in the Portfolio’s relevant Appendix in Supplement V of the Prospectus.

Fixed income Transferable Securities may include (without limitation) fixed and floating rate, senior and subordinated corporate debt obligations (such as bonds, debentures, notes and commercial paper), mortgage and asset-backed securities, collateralised debt and loan obligations, Money Market Instruments, Brady bonds and other debt issued by governments, their agencies and instrumentalities, or by central banks, convertible debt obligations (including CoCos), and reverse repurchase agreements.

The Portfolio may invest in PRC Debt Securities, including via Bond Connect and/or the CIBM Direct Access as applicable. Please refer to Paragraph 4.2.11 “Investments in China” of the Prospectus.

The Portfolio may invest up to 25% of its net assets in convertible debt obligations, including CoCos. For further information on CoCos and the associated risks, please refer to Paragraph 4.4.15 “Contingent Capital Securities (CoCos)” of the Prospectus.

The Portfolio will not invest in equity and/or equity related Transferable Securities, with the exception of (i) shares in other Permitted Funds which do not invest in equity securities, (ii) securities received as part of restructuring or similar event and (iii) preferred stock.

The Portfolio may invest up to 10% of its net assets in Permitted Funds.

The Portfolio may invest in excess of 20% of its net assets in mortgage and asset-backed securities either directly or indirectly via a financial index, including but not limited to CMBX. The issuers of such mortgage and asset-backed securities may include but are not limited to government agencies and/or government sponsored enterprises and special purpose vehicles sponsored by banks.

The Portfolio may also use financial derivative instruments as part of its investment policy or for hedging purposes. These may include, but are not limited to, foreign currency forward contracts, futures, options (on interest rates, credit and currencies), swaps (including interest rate swaps, credit default swaps and total return swaps) and credit linked instruments. For further information on the use of financial derivative instruments and associated risks, please refer to Appendix C “Derivatives and Efficient Portfolio Management Techniques” together with Section 4 “Risk Considerations” in the Prospectus.

Investors should be aware that the use of financial derivative instruments in the Portfolio may result in both net long and net short exposures in, amongst other things, interest rates, credit and currencies. For further information on the investment techniques used by the Investment Adviser, please refer to Section 3 “Goldman Sachs Funds - Calculation of Global Exposure and Expected Level of Leverage” of the Supplement.

The Portfolio may also hold bank deposits at sight, such as cash held in current accounts with a bank accessible at any time. Such holdings may only temporarily exceed 20% of the net assets of the Portfolio under exceptionally unfavourable market conditions. Moreover, cash equivalents such as deposits, Money Market Instruments and money market funds may be used for the purpose of cash management and in case of unfavourable conditions, provided that the Investment Adviser considers this to be in the best interests of the Shareholders.

The Investment Adviser intends to engage in SFTR techniques on, amongst other things, equity securities, markets, interest rates, credit, currencies, commodity indices and other Permitted Investments in line with the exposures set out below (in each case as a percentage of net asset value).

| Type of transaction                                    | Under normal circumstances it is generally expected that the principal amount of such transactions would represent a proportion of the Portfolio's net asset value indicated below.* | Under normal circumstances it is generally expected that the principal amount of the Portfolio's assets that can be subject to the transaction may represent up to a maximum of the proportion of the Portfolio's net asset value indicated below. |
|--------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Total return swaps                                     | 0%                                                                                                                                                                                   | 50%                                                                                                                                                                                                                                                |

\*In certain circumstances this proportion may be higher.

### 3. Calculation of Global Exposure and Expected Level of Leverage

The table below sets out for this Portfolio the information mentioned in Section 3 "Goldman Sachs Funds – Calculation of Global Exposure and Expected Level of Leverage" of the Supplement.

| Market Risk Calculation | Limit | Reference Portfolio/Benchmark*                                               | Expected Level of Leverage                     |
|-------------------------|-------|------------------------------------------------------------------------------|------------------------------------------------|
|                         |       |                                                                              | Gross Sum of Notionals<br><br>(Gross Exposure) |
| Relative VaR            | 2 x   | Bloomberg Global Aggregate Corporate Index (Total Return Gross) (USD-Hedged) | 100%-800%**                                    |

\*The Portfolio is actively managed and is not designed to track its Reference Portfolio/Benchmark. Therefore the performance of the Portfolio and the Reference Portfolio/Benchmark may deviate. The Portfolio may offer Share Classes which are denominated in or hedged into currencies other than the Base Currency of the Portfolio. Accordingly, the Reference Portfolio/Benchmark noted above may be denominated in or hedged into the relevant currency of a particular Share Class.

\*\*This expected range of leverage is not a limit and may vary over time as described in the Section 3 "Goldman Sachs – Calculation of Global Exposure and Expected Level of Leverage" of the Supplement. The actual levels may deviate from the stated range.

Given that many of the strategies used by the Portfolio are implemented through the use of financial derivative instruments, including those referred to in Section 3 "Goldman Sachs Funds - Calculation of Global Exposure and Expected Level of Leverage" of the Supplement, the expected level of leverage, as calculated under the gross sum of notionals exposures, may be relatively high. Pursuit of the investment objective may involve the use of swaps (such as short term interest rate swaps, total return swaps or equity swaps), options, futures and forward currency contracts, which may result in relatively higher levels of notional exposure. For further information on the use of financial derivative instruments and associated risks, please refer to Section 4 "Risk Considerations" and Appendix C "Derivatives and Efficient Portfolio Management Techniques" in the Prospectus. It also means that the expected level of leverage may exceed the stated range, particularly as a result of effecting certain investment exposures and also as a result of investor redemptions that can result in offsetting financial derivative instruments trades being placed which whilst they reduce investment exposure can increase leverage based on the gross sum of notionals calculation.

Shareholders should note that leverage resulting from the use of financial derivative instruments may result in magnified losses. However, the "Expected Level of Leverage" using the gross sum of notionals in the table above does not necessarily provide an appropriate illustration of the overall risk profile of the Portfolio as financial derivative instruments are used to manage risk as well as to seek return. This is largely due to the fact that the gross sum of

notional exposure calculation simply aggregates the absolute sum of all long and short financial derivative instrument positions, even if the financial derivative instruments are for hedging or offsetting purposes. Further the gross sum of notionals calculation uses just notional values rather than measures that calculate the overall contributions to risk which will often explain why the leverage levels under this method appear high. By way of illustration, to achieve a desired level of investment risk in interest rate markets, the amount of gross leverage used to achieve this risk will vary significantly depending on the underlying market risk (or 'duration') of the instrument chosen to implement this investment decision. For example, using an instrument with less duration risk - such as a shorter maturity interest rate derivative - requires more leverage to achieve the higher amount of required notional market exposure, compared to using a longer maturity instrument with higher duration risk. In this example, a 2 year maturity interest rate derivative would require approximately 4 times as much notional exposure compared to using a 10 year maturity instrument.

Please refer to Paragraph 1 "Investment Objective" and Paragraph 2 "Investment Policies" of this Appendix for further information on the relevant Portfolio's strategy and the Synthetic Risk and Reward Indicator (SRRI) in the KIID of the Portfolio for details on such Portfolio's historic risk profile where applicable. Further details on the average leverage levels, as calculated using the gross sum of notionals exposures, will be disclosed in the Fund's annual financial statements for the relevant accounting period.

#### **4. Principal Risks of the Portfolio**

Investing in the Portfolio implies (without limitation) the following risk factors which are listed in the same order as in the Prospectus:

- 4.2 Investment risks and in particular 4.2.9 Emerging Markets and 4.2.11 Investments in China
- 4.4 Investment in debt securities
- 4.6 Investment in derivatives
- 4.7 Other investments
- 4.9 Leverage and hedging
- 4.10 Currency risks
- 4.11 Currency hedging

The Portfolio may be exposed to sustainability risks from time to time. A sustainability risk is defined in the EU Sustainable Finance Disclosure Regulation as an environmental, social or governance event or condition that could cause an actual or a potential material negative impact on the value of investments. The universe of sustainability events or conditions is very broad, and their relevance, materiality and impact on investments will depend on a number of factors such as the investment strategy pursued by the Portfolio, asset class, asset location and asset sector. Depending on the circumstances, examples of sustainability risks can include physical environmental risks, climate change transition risks, supply chain disruptions, improper labour practices, lack of board diversity and corruption. If they materialise, sustainability risks can reduce the value of underlying investments held within the Portfolio and could have a material impact on the performance and returns of the Portfolio.

The Investment Adviser does not operate a risk framework that is specifically tailored to sustainability risks. Rather relevant sustainability risks may be considered as part of the processes adopted by the Investment Adviser to monitor and manage general market risks. Accordingly, the Investment Adviser may integrate sustainability risks in its investment decision making process by having regard to material sustainability events that cause or are reasonably expected to cause broad disruption to economic growth, investor sentiment and asset flows in its ongoing assessment and monitoring of financial markets and the investment risk profile of the Portfolio.

The Investment Adviser may utilise proprietary and/or third-party tools and research to assess and monitor market risks that are relevant to the Portfolio.

Please refer to the relevant paragraphs of Section 4 "Risk Considerations" in the Prospectus which includes further relevant risk considerations.

#### **5. Portfolio Share Class Table**

The following table sets out the different Share Classes of the Portfolio and relevant fees and expenses. For further details on the Share Classes, please refer to Section 3 "Description of Share Classes" of the Prospectus.

| Base Currency:        | USD                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |              |                                               |                |                  |                          |                                 |
|-----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|-----------------------------------------------|----------------|------------------|--------------------------|---------------------------------|
| Additional Notes:     | <p>Each type of Share Class listed in the table below may also be offered:</p> <p>(i) Denominated in or hedged into other currencies. For a list of available currencies and minimum investment amounts, please refer to Section 2 “Goldman Sachs Funds – Minimum Investment Amount Table” of the Supplement.</p> <p>(ii) As accumulation or distribution classes. Please refer to Section 18 “Dividend Policy” of the Prospectus.</p> <p>(iii) As Duration Hedged Share Classes. Please refer to Paragraph 3.22 “Duration Hedged Share Classes” of the Prospectus and please note that since 30 July 2017 Duration Hedged Share Classes have been closed for subscriptions by new investors and as of 30 July 2018 Duration Hedged Share Classes will be closed for any subscriptions, including subscriptions by existing investors.</p> |              |                                               |                |                  |                          |                                 |
| Share Class           | Share Class Currency                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Sales Charge | Contingent Deferred Sales Charge <sup>1</sup> | Management Fee | Distribution Fee | Shareholder Services Fee | Operating Expenses <sup>2</sup> |

<sup>1</sup> A Contingent Deferred Sales Charge is imposed on Class B and Class C Shares. Please refer to Section 3 “Description of Share Classes” of the Prospectus for further information.

<sup>2</sup> The Portfolio pays transaction costs, including taxes and brokerage commissions, each time it buys and sells securities or instruments and may also pay Borrowing Costs. Shareholders should note that these costs are not reflected in the Portfolio’s operating expenses, but will be reflected in its performance.

## 6. Subscriptions, Redemptions and Exchanges

Subject to the terms outlined in the Prospectus, subscriptions, redemptions and exchanges of Shares of the Portfolio may take place on any Business Day. The cut-off time for subscriptions, redemptions and exchanges of Shares of the Portfolio is 2:00 p.m. Central European time on the same Business Day.

## 12. Goldman Sachs Global Fixed Income Portfolio

### 1. Investment Objective

The Goldman Sachs Global Fixed Income Portfolio (the “Portfolio”) seeks total returns consisting of income and capital appreciation by investing primarily in Investment Grade fixed income securities.

### 2. Investment Policies

The Portfolio will, under normal circumstances, invest at least two thirds of its net assets (excluding cash and cash-equivalents) in Investment Grade fixed income Transferable Securities of issuers domiciled anywhere in the world.

The Investment Adviser implements a multi-faceted approach to Environmental, Social and Governance (ESG) considerations (“ESG Criteria”) into its fundamental investment process. Further details of the ESG characteristics of the Portfolio can be found in the Portfolio’s relevant Appendix in Supplement V of the Prospectus.

Fixed income Transferable Securities may include (without limitation) fixed and floating rate, senior and subordinated corporate debt obligations (such as bonds, debentures, notes and commercial paper), mortgage and asset-backed securities, collateralised debt and loan obligations, Money Market Instruments, Brady bonds and other debt issued by governments, their agencies and instrumentalities, or by central banks, convertible debt obligations (including CoCos), and reverse repurchase agreements.

The Portfolio may invest in PRC Debt Securities, including via Bond Connect and/or the CIBM Direct Access as applicable. Please refer to Paragraph 4.2.11 “Investments in China” of the Prospectus.

The Portfolio may invest up to 25% of its net assets in convertible debt obligations, including CoCos. For further information on CoCos and the associated risks, please refer to Paragraph 4.4.15 “Contingent Capital Securities (CoCos)” of the Prospectus.

The Portfolio will not invest in equity and/or equity related Transferable Securities, with the exception of (i) shares in other Permitted Funds which do not invest in equity securities, (ii) securities received as part of restructuring or similar event and (iii) preferred stock.

The Portfolio may invest up to 10% of its net assets in Permitted Funds.

The Portfolio may invest in excess of 20% of its net assets in mortgage and asset-backed securities either directly or indirectly via a financial index, including but not limited to CMBX. The issuers of such mortgage and asset-backed securities may include but are not limited to government agencies and/or government sponsored enterprises and special purpose vehicles sponsored by banks.

The Portfolio may also use financial derivative instruments as part of its investment policy or for hedging purposes. These may include, but are not limited to, foreign currency forward contracts, futures, options (on interest rates, credit and currencies), swaps (including interest rate swaps, credit default swaps and total return swaps) and credit linked instruments. For further information on the use of financial derivative instruments and associated risks, please refer to Appendix C - “Derivatives and Efficient Portfolio Management Techniques” together with Section 4 “Risk Considerations” in the Prospectus.

Investors should be aware that the use of financial derivative instruments in the Portfolio may result in both net long and net short exposures in, amongst other things, interest rates, credit and currencies. For further information on the investment techniques used by the Investment Adviser, please refer to Section 3 “Goldman Sachs Funds - Calculation of Global Exposure and Expected Level of Leverage” of the Supplement.

The Portfolio may also hold bank deposits at sight, such as cash held in current accounts with a bank accessible at any time. Such holdings may only temporarily exceed 20% of the net assets of the Portfolio under exceptionally unfavourable market conditions. Moreover, cash equivalents such as deposits, Money Market Instruments and money market funds may be used for the purpose of cash management and in case of unfavourable conditions, provided that the Investment Adviser considers this to be in the best interests of the Shareholders.

The Investment Adviser intends to engage in SFTR techniques on, amongst other things, equity securities, markets, interest rates, credit, currencies, commodity indices and other Permitted Investments in line with the exposures set out below (in each case as a percentage of net asset value).

| Type of transaction                                    | Under normal circumstances it is generally expected that the principal amount of such transactions would represent a proportion of the Portfolio's net asset value indicated below.* | Under normal circumstances it is generally expected that the principal amount of the Portfolio's assets that can be subject to the transaction may represent up to a maximum of the proportion of the Portfolio's net asset value indicated below. |
|--------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Total return swaps                                     | 0%                                                                                                                                                                                   | 50%                                                                                                                                                                                                                                                |
| Repurchase, including reverse repurchase, transactions | 0%                                                                                                                                                                                   | 50%                                                                                                                                                                                                                                                |
| Securities lending transactions                        | 0%                                                                                                                                                                                   | 15%                                                                                                                                                                                                                                                |

\*In certain circumstances this proportion may be higher.

### 3. Calculation of Global Exposure and Expected Level of Leverage

The table below sets out for this Portfolio the information mentioned in Section 3 "Goldman Sachs Funds – Calculation of Global Exposure and Expected Level of Leverage" of the Supplement.

| Market Risk Calculation | Limit | Reference Portfolio/Benchmark*                        | Expected Level of Leverage                 |
|-------------------------|-------|-------------------------------------------------------|--------------------------------------------|
|                         |       |                                                       | Gross Sum of Notionals<br>(Gross Exposure) |
| Relative VaR            | 2 x   | Bloomberg Global Aggregate Index (Total Return Gross) | 100%-800%**                                |

\*The Portfolio is actively managed and is not designed to track its Reference Portfolio/Benchmark. Therefore the performance of the Portfolio and the Reference Portfolio/Benchmark may deviate. The Portfolio may offer Share Classes which are denominated in or hedged into currencies other than the Base Currency of the Portfolio. Accordingly, the Reference Portfolio/Benchmark noted above may be denominated in or hedged into the relevant currency of a particular Share Class.

\*\*This expected range of leverage is not a limit and may vary over time as described in the Section 3 "Goldman Sachs – Calculation of Global Exposure and Expected Level of Leverage" of the Supplement. The actual levels may deviate from the stated range.

Given that many of the strategies used by the Portfolio are implemented through the use of financial derivative instruments, including those referred to in Section 3 "Goldman Sachs Funds - Calculation of Global Exposure and Expected Level of Leverage" of the Supplement, the expected level of leverage, as calculated under the gross sum of notionals exposures, may be relatively high. Pursuit of the investment objective may involve the use of swaps (such as short term interest rate swaps, total return swaps or equity swaps), options, futures and forward currency contracts, which may result in relatively higher levels of notional exposure. For further information on the use of financial derivative instruments and associated risks, please refer to Section 4 "Risk Considerations" and Appendix C "Derivatives and Efficient Portfolio Management Techniques" in the Prospectus. It also means that the expected level of leverage may exceed the stated range, particularly as a result of effecting certain investment exposures and also as a result of investor redemptions that can result in offsetting financial derivative instruments trades being placed which whilst they reduce investment exposure can increase leverage based on the gross sum of notionals calculation.

Shareholders should note that leverage resulting from the use of financial derivative instruments may result in magnified losses. However, the "Expected Level of Leverage" using the gross sum of notionals in the table above does not necessarily provide an appropriate illustration of the overall risk profile of the Portfolio as financial derivative instruments are used to manage risk as well as to seek return. This is largely due to the fact that the gross sum of notional exposure calculation simply aggregates the absolute sum of all long and short financial derivative instrument positions, even if the financial derivative instruments are for hedging or offsetting purposes. Further the gross sum of notionals calculation uses just notional values rather than measures that calculate the overall contributions to risk which will often explain why the leverage levels under this method appear high. By way of illustration, to achieve a desired level of investment risk in interest rate markets, the amount of gross leverage used to achieve this risk will vary significantly depending on the underlying market risk (or 'duration') of the instrument chosen to implement this investment decision. For example, using an instrument with less duration risk - such as a shorter maturity interest rate derivative - requires more leverage to achieve the higher amount of required notional market exposure,

compared to using a longer maturity instrument with higher duration risk. In this example, a 2 year maturity interest rate derivative would require approximately 4 times as much notional exposure compared to using a 10 year maturity instrument.

Please refer to Paragraph 1 “Investment Objective” and Paragraph 2 “Investment Policies” of this Appendix for further information on the relevant Portfolio’s strategy and the Synthetic Risk and Reward Indicator (SRRI) in the KIID of the Portfolio for details on such Portfolio’s historic risk profile where applicable. Further details on the average leverage levels, as calculated using the gross sum of notionals exposures, will be disclosed in the Fund’s annual financial statements for the relevant accounting period.

#### **4. Principal Risks of the Portfolio**

Investing in the Portfolio implies (without limitation) the following risk factors which are listed in the same order as in the Prospectus:

- 4.2 Investment risks and in particular 4.2.9 Emerging Markets and 4.2.11 Investments in China
- 4.4 Investment in debt securities
- 4.6 Investment in derivatives
- 4.7 Other investments
- 4.9 Leverage and hedging
- 4.10 Currency risks
- 4.11 Currency hedging

The Portfolio may be exposed to sustainability risks from time to time. A sustainability risk is defined in the EU Sustainable Finance Disclosure Regulation as an environmental, social or governance event or condition that could cause an actual or a potential material negative impact on the value of investments. The universe of sustainability events or conditions is very broad, and their relevance, materiality and impact on investments will depend on a number of factors such as the investment strategy pursued by the Portfolio, asset class, asset location and asset sector. Depending on the circumstances, examples of sustainability risks can include physical environmental risks, climate change transition risks, supply chain disruptions, improper labour practices, lack of board diversity and corruption. If they materialise, sustainability risks can reduce the value of underlying investments held within the Portfolio and could have a material impact on the performance and returns of the Portfolio.

The Investment Adviser does not operate a risk framework that is specifically tailored to sustainability risks. Rather relevant sustainability risks may be considered as part of the processes adopted by the Investment Adviser to monitor and manage general market risks. Accordingly, the Investment Adviser may integrate sustainability risks in its investment decision making process by having regard to material sustainability events that cause or are reasonably expected to cause broad disruption to economic growth, investor sentiment and asset flows in its ongoing assessment and monitoring of financial markets and the investment risk profile of the Portfolio.

The Investment Adviser may utilise proprietary and/or third-party tools and research to assess and monitor market risks that are relevant to the Portfolio.

Please refer to the relevant paragraphs of Section 4 “Risk Considerations” in the Prospectus which includes further relevant risk considerations.

#### **5. Portfolio Share Class Table**

The following table sets out the different Share Classes of the Portfolio and relevant fees and expenses. For further details on the Share Classes, please refer to Section 3 “Description of Share Classes” of the Prospectus.

| Base Currency:        | USD                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |              |                                               |                |                  |                          |                                 |

| Additional Notes:     | <p>Each type of Share Class listed in the table below may also be offered:</p> <p>(i) Denominated in or hedged into other currencies. For a list of available currencies and minimum investment amounts, please refer to Section 2 "Goldman Sachs Funds – Minimum Investment Amount Table" of the Supplement.</p> <p>(ii) As classes which aim to provide a EUR based investor with an exposure to the underlying portfolio currencies (excluding EUR - in the case where there is some EUR exposure in the underlying portfolio) relative to USD rather than exposure to the underlying portfolio currencies relative to EUR. The sizing of the USD/EUR currency forward transaction may be determined by reference to the Portfolio's benchmark rather than the underlying portfolio currency positions. These Share Classes are denoted: "(EUR) (Customised Long GFI Ccy vs. USD)".</p> <p>(iii) As accumulation or distribution classes. Please refer to Section 18 "Dividend Policy" of the Prospectus.</p> |              |                                               |                |                  |                          |                                 |
| Share Class           | Share Class Currency                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Sales Charge | Contingent Deferred Sales Charge <sup>1</sup> | Management Fee | Distribution Fee | Shareholder Services Fee | Operating Expenses <sup>2</sup> |
| Base Shares           | USD                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Up to 5.50 % | Nil                                           | 0.70%          | Nil              | Nil                      | Variable                        |
| Other Currency Shares | EUR                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Up to 5.50 % | Nil                                           | 0.70%          | Nil              | Nil                      | Variable                        |

<sup>1</sup> A Contingent Deferred Sales Charge is imposed on Class B and Class C Shares. Please refer to Section 3 "Description of Share Classes" of the Prospectus for further information.

<sup>2</sup> The Portfolio pays transaction costs, including taxes and brokerage commissions, each time it buys and sells securities or instruments and may also pay Borrowing Costs. Shareholders should note that these costs are not reflected in the Portfolio's operating expenses, but will be reflected in its performance.

## 6. Subscriptions, Redemptions and Exchanges

Subject to the terms outlined in the Prospectus, subscriptions, redemptions and exchanges of Shares of the Portfolio may take place on any Business Day. The cut-off time for subscriptions, redemptions and exchanges of Shares of the Portfolio is 2:00 p.m. Central European time on the same Business Day.

## 13. Goldman Sachs Global Fixed Income Portfolio (Hedged)

### 1. Investment Objective

The Goldman Sachs Global Fixed Income Portfolio (Hedged) (the “Portfolio”) seeks total returns consisting of income and capital appreciation by investing primarily in Investment Grade fixed income securities.

### 2. Investment Policies

The Portfolio will, under normal circumstances, invest at least two thirds of its net assets (excluding cash and cash-equivalents) in Investment Grade fixed income Transferable Securities of issuers domiciled anywhere in the world. The Investment Adviser will generally seek to hedge the Portfolio’s currency exposure back to Euro, however it may also take active investment currency decisions to generate return.

The Investment Adviser implements a multi-faceted approach to Environmental, Social and Governance (ESG) considerations (“ESG Criteria”) into its fundamental investment process. Further details of the ESG characteristics of the Portfolio can be found in the Portfolio’s relevant Appendix in Supplement V of the Prospectus.

Fixed income Transferable Securities may include (without limitation) fixed and floating rate, senior and subordinated corporate debt obligations (such as bonds, debentures, notes and commercial paper), mortgage and asset-backed securities, collateralised debt and loan obligations, Money Market Instruments, Brady bonds and other debt issued by governments, their agencies and instrumentalities, or by central banks, convertible debt obligations (including CoCos), and reverse repurchase agreements.

The Portfolio may invest in PRC Debt Securities, including via Bond Connect and/or the CIBM Direct Access as applicable. Please refer to Paragraph 4.2.11 “Investments in China” of the Prospectus.

The Portfolio may invest up to 25% of its net assets in convertible debt obligations, including CoCos. For further information on CoCos and the associated risks, please refer to Paragraph 4.4.15 “Contingent Capital Securities (CoCos)” of the Prospectus.

The Portfolio will not invest in equity and/or equity related Transferable Securities, with the exception of (i) shares in other Permitted Funds which do not invest in equity securities, (ii) securities received as part of restructuring or similar event and (iii) preferred stock.

The Portfolio may invest up to 10% of its net assets in Permitted Funds.

The Portfolio may invest in excess of 20% of its net assets in mortgage and asset-backed securities either directly or indirectly via a financial index, including but not limited to CMBX. The issuers of such mortgage and asset-backed securities may include but are not limited to government agencies and/or government sponsored enterprises and special purpose vehicles sponsored by banks.

The Portfolio may also use financial derivative instruments as part of its investment policy or for hedging purposes. These may include, but are not limited to, foreign currency forward contracts, futures, options (on interest rates, credit and currencies), swaps (including interest rate swaps, credit default swaps and total return swaps) and credit linked instruments. For further information on the use of financial derivative instruments and associated risks, please refer to Appendix C - “Derivatives and Efficient Portfolio Management Techniques” together with Section 4 “Risk Considerations” in the Prospectus.

Investors should be aware that the use of financial derivative instruments in the Portfolio may result in both net long and net short exposures in, amongst other things, interest rates, credit and currencies. For further information on the investment techniques used by the Investment Adviser, please refer to Section 3 “Goldman Sachs Funds - Calculation of Global Exposure and Expected Level of Leverage” of the Supplement.

The Portfolio may also hold bank deposits at sight, such as cash held in current accounts with a bank accessible at any time. Such holdings may only temporarily exceed 20% of the net assets of the Portfolio under exceptionally unfavourable market conditions. Moreover, cash equivalents such as deposits, Money Market Instruments and

money market funds may be used for the purpose of cash management and in case of unfavourable conditions, provided that the Investment Adviser considers this to be in the best interests of the Shareholders.

The Investment Adviser intends to engage in SFTR techniques on, amongst other things, equity securities, markets, interest rates, credit, currencies, commodity indices and other Permitted Investments in line with the exposures set out below (in each case as a percentage of net asset value).

| Type of transaction                                    | Under normal circumstances it is generally expected that the principal amount of such transactions would represent a proportion of the Portfolio's net asset value indicated below.* | Under normal circumstances it is generally expected that the principal amount of the Portfolio's assets that can be subject to the transaction may represent up to a maximum of the proportion of the Portfolio's net asset value indicated below. |

\*In certain circumstances this proportion may be higher.

### 3. Calculation of Global Exposure and Expected Level of Leverage

The table below sets out for this Portfolio the information mentioned in Section 3 “Goldman Sachs Funds – Calculation of Global Exposure and Expected Level of Leverage” of the Supplement.

| Market Risk Calculation | Limit | Reference Portfolio/Benchmark*                                     | Expected Level of Leverage                 |
|-------------------------|-------|--------------------------------------------------------------------|--------------------------------------------|
|                         |       |                                                                    | Gross Sum of Notionals<br>(Gross Exposure) |
| Relative VaR            | 2 x   | Bloomberg Global Aggregate Index (Total Return Gross) (EUR-hedged) | 100%-800%**                                |

\*The Portfolio is actively managed and is not designed to track its Reference Portfolio/Benchmark. Therefore the performance of the Portfolio and the Reference Portfolio/Benchmark may deviate. The Portfolio may offer Share Classes which are denominated in or hedged into currencies other than the Base Currency of the Portfolio. Accordingly, the Reference Portfolio/Benchmark noted above may be denominated in or hedged into the relevant currency of a particular Share Class.

\*\*This expected range of leverage is not a limit and may vary over time as described in the Section 3 “Goldman Sachs – Calculation of Global Exposure and Expected Level of Leverage” of the Supplement. The actual levels may deviate from the stated range.

Given that many of the strategies used by the Portfolio are implemented through the use of financial derivative instruments, including those referred to in Section 3 “Goldman Sachs Funds - Calculation of Global Exposure and Expected Level of Leverage” of the Supplement, the expected level of leverage, as calculated under the gross sum of notionals exposures, may be relatively high. Pursuit of the investment objective may involve the use of swaps (such as short term interest rate swaps, total return swaps or equity swaps), options, futures and forward currency contracts, which may result in relatively higher levels of notional exposure. For further information on the use of financial derivative instruments and associated risks, please refer to Section 4 “Risk Considerations” and Appendix C “Derivatives and Efficient Portfolio Management Techniques” in the Prospectus. It also means that the expected level of leverage may exceed the stated range, particularly as a result of effecting certain investment exposures and also as a result of investor redemptions that can result in offsetting financial derivative instruments trades being placed which whilst they reduce investment exposure can increase leverage based on the gross sum of notionals calculation.

Shareholders should note that leverage resulting from the use of financial derivative instruments may result in magnified losses. However, the “Expected Level of Leverage” using the gross sum of notionals in the table above does not necessarily provide an appropriate illustration of the overall risk profile of the Portfolio as financial derivative instruments are used to manage risk as well as to seek return. This is largely due to the fact that the gross sum of notional exposure calculation simply aggregates the absolute sum of all long and short financial derivative instrument positions, even if the financial derivative instruments are for hedging or offsetting purposes. Further the gross sum of notionals calculation uses just notional values rather than measures that calculate the overall contributions to risk which will often explain why the leverage levels under this method appear high. By way of illustration, to achieve a desired level of investment risk in interest rate markets, the amount of gross leverage used to achieve this risk will

vary significantly depending on the underlying market risk (or 'duration') of the instrument chosen to implement this investment decision. For example, using an instrument with less duration risk - such as a shorter maturity interest rate derivative - requires more leverage to achieve the higher amount of required notional market exposure, compared to using a longer maturity instrument with higher duration risk. In this example, a 2 year maturity interest rate derivative would require approximately 4 times as much notional exposure compared to using a 10 year maturity instrument.

Please refer to Paragraph 1 "Investment Objective" and Paragraph 2 "Investment Policies" of this Appendix for further information on the relevant Portfolio's strategy and the Synthetic Risk and Reward Indicator (SRRI) in the KIID of the Portfolio for details on such Portfolio's historic risk profile where applicable. Further details on the average leverage levels, as calculated using the gross sum of notionals exposures, will be disclosed in the Fund's annual financial statements for the relevant accounting period.

#### **4. Principal Risks of the Portfolio**

Investing in the Portfolio implies (without limitation) the following risk factors which are listed in the same order as in the Prospectus:

- 4.2 Investment risks and in particular 4.2.9 Emerging Markets and 4.2.11 Investments in China
- 4.4 Investment in debt securities
- 4.6 Investment in derivatives
- 4.7 Other investments
- 4.9 Leverage and hedging
- 4.10 Currency risks
- 4.11 Currency hedging

The Portfolio may be exposed to sustainability risks from time to time. A sustainability risk is defined in the EU Sustainable Finance Disclosure Regulation as an environmental, social or governance event or condition that could cause an actual or a potential material negative impact on the value of investments. The universe of sustainability events or conditions is very broad, and their relevance, materiality and impact on investments will depend on a number of factors such as the investment strategy pursued by the Portfolio, asset class, asset location and asset sector. Depending on the circumstances, examples of sustainability risks can include physical environmental risks, climate change transition risks, supply chain disruptions, improper labour practices, lack of board diversity and corruption. If they materialise, sustainability risks can reduce the value of underlying investments held within the Portfolio and could have a material impact on the performance and returns of the Portfolio.

The Investment Adviser does not operate a risk framework that is specifically tailored to sustainability risks. Rather relevant sustainability risks may be considered as part of the processes adopted by the Investment Adviser to monitor and manage general market risks. Accordingly, the Investment Adviser may integrate sustainability risks in its investment decision making process by having regard to material sustainability events that cause or are reasonably expected to cause broad disruption to economic growth, investor sentiment and asset flows in its ongoing assessment and monitoring of financial markets and the investment risk profile of the Portfolio.

The Investment Adviser may utilise proprietary and/or third-party tools and research to assess and monitor market risks that are relevant to the Portfolio.

Please refer to the relevant paragraphs of Section 4 "Risk Considerations" in the Prospectus which includes further relevant risk considerations.

#### **5. Portfolio Share Class Table**

The following table sets out the different Share Classes of the Portfolio and relevant fees and expenses. For further details on the Share Classes, please refer to Section 3 "Description of Share Classes" of the Prospectus.

| Base Currency:        | EUR                                                                                                                                                                                                                                                                                                                                                                                                                 |              |                                               |                |                  |                          |                                 |
|-----------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|-----------------------------------------------|----------------|------------------|--------------------------|---------------------------------|
| Additional Notes:     | <p>Each type of Share Class listed may also be offered:</p> <p>(i) Denominated in or hedged into other currencies. For a list of available currencies and minimum investment amounts, please refer to Section 2 “Goldman Sachs Funds – Minimum Investment Amount Table” of the Supplement.</p> <p>(ii) As accumulation or distribution classes. Please refer to Section 18 “Dividend Policy” of the Prospectus.</p> |              |                                               |                |                  |                          |                                 |
| Share Class           | Share Class Currency                                                                                                                                                                                                                                                                                                                                                                                                | Sales Charge | Contingent Deferred Sales Charge <sup>1</sup> | Management Fee | Distribution Fee | Shareholder Services Fee | Operating Expenses <sup>2</sup> |
| Base Shares           | EUR                                                                                                                                                                                                                                                                                                                                                                                                                 | Up to 5.50 % | Nil                                           | 0.70%          | Nil              | Nil                      | Variable                        |
| Other Currency Shares | USD                                                                                                                                                                                                                                                                                                                                                                                                                 | Up to 5.50 % | Nil                                           | 0.70%          | Nil              | Nil                      | Variable                        |

<sup>1</sup> A Contingent Deferred Sales Charge is imposed on Class B and Class C Shares. Please refer to Section 3 “Description of Share Classes” of the Prospectus for further information.

<sup>2</sup> The Portfolio pays transaction costs, including taxes and brokerage commissions, each time it buys and sells securities or instruments and may also pay Borrowing Costs. Shareholders should note that these costs are not reflected in the Portfolio’s operating expenses, but will be reflected in its performance.

## 6. Subscriptions, Redemptions and Exchanges

Subject to the terms outlined in the Prospectus, subscriptions, redemptions and exchanges of Shares of the Portfolio may take place on any Business Day. The cut-off time for subscriptions, redemptions and exchanges of Shares of the Portfolio is 2:00 p.m. Central European time on the same Business Day.

## 14. Goldman Sachs Global High Yield Portfolio

### 1. Investment Objective

The Goldman Sachs Global High Yield Portfolio (the “Portfolio”) seeks total returns consisting of income and capital appreciation by investing primarily in below Investment Grade fixed income securities of North American and European Companies.

### 2. Investment Policies

The Portfolio will, under normal circumstances, invest at least two thirds of its net assets (excluding cash and cash-equivalents) in below Investment Grade fixed income Transferable Securities issued by companies that are domiciled in, or which derive the predominant proportion of their revenues or profits from North America and Europe.

The Investment Adviser implements a multi-faceted approach to Environmental, Social and Governance (ESG) considerations (“ESG Criteria”) into its fundamental investment process. Further details of the ESG characteristics of the Portfolio can be found in the Portfolio’s relevant Appendix in Supplement V of the Prospectus.

Fixed income Transferable Securities may include (without limitation) fixed and floating rate, senior and subordinated corporate debt obligations (such as bonds, debentures, notes and commercial paper), mortgage and asset-backed securities, collateralised debt and loan obligations, Money Market Instruments, Brady bonds and other debt issued by governments, their agencies and instrumentalities, or by central banks, convertible debt obligations (including CoCos), and reverse repurchase agreements.

The Portfolio may invest up to 25% of its net assets in convertible debt obligations and up to 30 % of its net assets in debt instruments with loss-absorption features (“LAP”) which may be subject to contingent write-down or contingent conversion to ordinary shares on the occurrence of trigger event(s). Convertible debt obligations include CoCos. LAP instruments include, but are not limited to, CoCos, Tier 1 and Tier 2 capital instruments and senior non-preferred debts.

For further information on LAP and the associated risks, please refer to Paragraph 4.4.8 “Debt instruments with loss-absorption features” of the Prospectus and for further information on CoCos and the associated risks, please refer to Paragraph 4.4.15 “Contingent Capital Securities (CoCos)” of the Prospectus.

The Portfolio may invest up to 10% of its net assets in equity and/or equity related Transferable Securities. Please note that this limit does not apply to investment in preferred stock.

The Portfolio may invest up to 10% of its net assets in Permitted Funds.

The Portfolio may invest in excess of 20% of its net assets in mortgage and asset-backed securities either directly or indirectly via a financial index, including but not limited to CMBX. The issuers of such mortgage and asset-backed securities may include but are not limited to government agencies and/or government sponsored enterprises and special purpose vehicles sponsored by banks.

The Portfolio may also use financial derivative instruments as part of its investment policy or for hedging purposes. These may include, but are not limited to, foreign currency forward contracts, futures, options (on interest rates, credit and currencies), swaps (including interest rate swaps, credit default swaps and total return swaps) and credit linked instruments. For further information on the use of financial derivative instruments and associated risks, please refer to Appendix C - “Derivatives and Efficient Portfolio Management Techniques” together with Section 4 “Risk Considerations” in the Prospectus.

Investors should be aware that the use of financial derivative instruments in the Portfolio may result in both net long and net short exposures in, amongst other things, interest rates, credit and currencies. For further information on the investment techniques used by the Investment Adviser, please refer to Section 3 “Goldman Sachs Funds - Calculation of Global Exposure and Expected Level of Leverage” of the Supplement.

The Portfolio may also hold bank deposits at sight, such as cash held in current accounts with a bank accessible at any time. Such holdings may only temporarily exceed 20% of the net assets of the Portfolio under exceptionally unfavourable market conditions. Moreover, cash equivalents such as deposits, Money Market Instruments and money market funds may be used for the purpose of cash management and in case of unfavourable conditions, provided that the Investment Adviser considers this to be in the best interests of the Shareholders.

The Investment Adviser intends to engage in SFTR techniques on, amongst other things, equity securities, markets, interest rates, credit, currencies, commodity indices and other Permitted Investments in line with the exposures set out below (in each case as a percentage of net asset value).

| Type of transaction                                    | Under normal circumstances it is generally expected that the principal amount of such transactions would represent a proportion of the Portfolio's net asset value indicated below.* | Under normal circumstances it is generally expected that the principal amount of the Portfolio's assets that can be subject to the transaction may represent up to a maximum of the proportion of the Portfolio's net asset value indicated below. |

| Securities lending transactions                        | 2%                                                                                                                                                                                   | 15%                                                                                                                                                                                                                                                |

\*In certain circumstances this proportion may be higher.

### 3. Calculation of Global Exposure and Expected Level of Leverage

The table below sets out for this Portfolio the information mentioned in Section 3 "Goldman Sachs Funds – Calculation of Global Exposure and Expected Level of Leverage" of the Supplement.

| Market Risk Calculation | Limit | Reference Portfolio/Benchmark*                                                    | Expected Level of Leverage                 |
|-------------------------|-------|-----------------------------------------------------------------------------------|--------------------------------------------|
|                         |       |                                                                                   | Gross Sum of Notionals<br>(Gross Exposure) |
| Relative VaR            | 2 x   | Bloomberg US Corporate High Yield Bond Index – 2% Issuer Cap (Total Return Gross) | 0%-100%**                                  |

\*The Portfolio is actively managed and is not designed to track its Reference Portfolio/Benchmark. Therefore the performance of the Portfolio and the Reference Portfolio/Benchmark may deviate. The Portfolio may offer Share Classes which are denominated in or hedged into currencies other than the Base Currency of the Portfolio. Accordingly, the Reference Portfolio/Benchmark noted above may be denominated in or hedged into the relevant currency of a particular Share Class.

\*\*This expected range of leverage is not a limit and may vary over time as described in the Section 3 "Goldman Sachs – Calculation of Global Exposure and Expected Level of Leverage" of the Supplement. The actual levels may deviate from the stated range.

### 4. Principal Risks of the Portfolio

Investing in the Portfolio implies (without limitation) the following risk factors which are listed in the same order as in the Prospectus:

- 4.2 Investment risks
- 4.4 Investment in debt securities
- 4.6 Investment in derivatives
- 4.7 Other investments
- 4.9 Leverage and hedging
- 4.10 Currency risks
- 4.11 Currency hedging.

The Portfolio may be exposed to sustainability risks from time to time. A sustainability risk is defined in the EU Sustainable Finance Disclosure Regulation as an environmental, social or governance event or condition that could cause an actual or a potential material negative impact on the value of investments. The universe of sustainability events or conditions is very broad, and their relevance, materiality and impact on investments will depend on a number of factors such as the investment strategy pursued by the Portfolio, asset class, asset location and asset

sector. Depending on the circumstances, examples of sustainability risks can include physical environmental risks, climate change transition risks, supply chain disruptions, improper labour practices, lack of board diversity and corruption. If they materialise, sustainability risks can reduce the value of underlying investments held within the Portfolio and could have a material impact on the performance and returns of the Portfolio.

The Investment Adviser does not operate a risk framework that is specifically tailored to sustainability risks. Rather relevant sustainability risks may be considered as part of the processes adopted by the Investment Adviser to monitor and manage general market risks. Accordingly, the Investment Adviser may integrate sustainability risks in its investment decision making process by having regard to material sustainability events that cause or are reasonably expected to cause broad disruption to economic growth, investor sentiment and asset flows in its ongoing assessment and monitoring of financial markets and the investment risk profile of the Portfolio.

The Investment Adviser may utilise proprietary and/or third-party tools and research to assess and monitor market risks that are relevant to the Portfolio.

Please refer to the relevant paragraphs of Section 4 “Risk Considerations” in the Prospectus which includes further relevant risk considerations.

## 5. Portfolio Share Class Table

The following table sets out the different Share Classes of the Portfolio and relevant fees and expenses. For further details on the Share Classes, please refer to Section 3 “Description of Share Classes” of the Prospectus.

| Base Currency:        | USD                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |              |                                               |                |                  |                          |                                 |                                |
|-----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|-----------------------------------------------|----------------|------------------|--------------------------|---------------------------------|--------------------------------|
| Additional Notes:     | <p>Each type of Share Class listed may also be offered:</p> <p>(i) Denominated in or hedged into other currencies. For a list of available currencies and minimum investment amounts, please refer to Section 2 “Goldman Sachs Funds – Minimum Investment Amount Table” of the Supplement.</p> <p>(ii) As accumulation or distribution classes. Please refer to Section 18 “Dividend Policy” of the Prospectus.</p> <p>(iii) As Duration Hedged Share Classes. Please refer to Paragraph 3.22 “Duration Hedged Share Classes” of the Prospectus and please note that since 30 July 2017 Duration Hedged Share Classes have been closed for subscriptions by new investors and as of 30 July 2018 Duration Hedged Share Classes will be closed for any subscriptions, including subscriptions by existing investors.</p> |              |                                               |                |                  |                          |                                 |                                |
| Share Class           | Share Class Currency                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Sales Charge | Contingent Deferred Sales Charge <sup>1</sup> | Management Fee | Distribution Fee | Shareholder Services Fee | Operating Expenses <sup>2</sup> | Redemption Charge <sup>3</sup> |

<sup>1</sup> A Contingent Deferred Sales Charge is imposed on Class B and Class C Shares. Please refer to Section 3 “Description of Share Classes” of the Prospectus for further information.

<sup>2</sup> The Portfolio pays transaction costs, including taxes and brokerage commissions, each time it buys and sells securities or instruments and may also pay Borrowing Costs. Shareholders should note that these costs are not reflected in the Portfolio’s operating expenses, but will be reflected in its performance.

<sup>3</sup> As described in Section 3 of the Prospectus, a Redemption Charge will only be payable on any redemption or exchange of “G” Shares within two years from the date of purchase.

## 6. Subscriptions, Redemptions and Exchanges

Subject to the terms outlined in the Prospectus, subscriptions, redemptions and exchanges of Shares of the Portfolio may take place on any Business Day. The cut-off time for subscriptions, redemptions and exchanges of Shares of the Portfolio is 2:00 p.m. Central European time on the same Business Day.

# 15. Goldman Sachs Global Securitised Income Bond Portfolio

## 1. Investment Objectives

The Goldman Sachs Global Securitised Income Bond Portfolio (the “Portfolio”) seeks total returns consisting of income and capital appreciation, with a focus on income, by investing primarily in asset backed securities of issuers around the world.

## 2. Investment Policies

The Portfolio will, under normal circumstances, invest at least two thirds of its net assets (excluding cash and cash equivalents) in asset backed securities of issuers around the world. Asset backed securities include, but are not limited to, Asset Backed Securities (ABS), Commercial Mortgage Backed Securities (CMBS), Residential Mortgage Backed Securities (RMBS) and Collateralised Loan Obligations (CLO). The Portfolio may also invest in other fixed income Transferable Securities.

The Portfolio will invest in both investment grade and non-investment grade securities and will seek to maintain, in normal market conditions, an Investment Grade average credit rating. The Portfolio will invest in both USD and non-USD denominated securities. The Investment Adviser will generally seek to hedge the Portfolio’s currency exposure back to USD.

Fixed income Transferable Securities may include (without limitation) fixed and floating rate, senior and subordinated corporate debt obligations (such as bonds, debentures, notes and commercial paper), mortgage and asset-backed securities, collateralised debt and loan obligations, Money Market Instruments, Brady bonds and other debt issued by governments, their agencies and instrumentalities, or by central banks and reverse repurchase agreements.

The Portfolio may invest up to 10% of its net assets in distressed securities.

The Portfolio may invest up to 10% of its net assets in Permitted Funds.

The Portfolio may invest in excess of 20% of its net assets in mortgage and asset-backed securities either directly or indirectly via a financial index, including but not limited to CMBX. The issuers of such mortgage and asset-backed securities may include but are not limited to government agencies and/or government sponsored enterprises and special purpose vehicles sponsored by banks.

The Portfolio may also use financial derivative instruments as part of its investment policy or for hedging purposes. These may include but are not limited to, foreign currency forward contracts, futures, options (on interest rates, credit and currencies), swaps (interest rate swaps, credit default swaps and total return swaps) and credit linked instruments. For further information on the use of financial derivative instruments and the associated risks, please refer to Appendix C - “Derivatives and Efficient Portfolio Management Techniques” together with Section 4 “Risk Considerations” in the Prospectus.

In relation to Article 7 of SFDR, which requires disclosure of how principal adverse impacts are considered at Portfolio level, the Investment Manager notes that there are still a number of uncertainties regarding this obligation, in particular due to the absence of centralised implementing standards, local guidance or established market practice. The Investment Manager does not currently take principal adverse impacts on sustainability factors into account in respect of the Portfolio, but will keep its approach in this area for the Portfolio under review.

As per Article 7 of the Taxonomy Regulation, Shareholders should note that investments underlying the Portfolios do not take into account the EU criteria for environmentally sustainable economic activities.

The Portfolio may also hold bank deposits at sight, such as cash held in current accounts with a bank accessible at any time. Such holdings may only temporarily exceed 20% of the net assets of the Portfolio under exceptionally unfavourable market conditions. Moreover, cash equivalents such as deposits, Money Market Instruments and money market funds may be used for the purpose of cash management and in case of unfavourable conditions, provided that the Investment Adviser considers this to be in the best interests of the Shareholders. The Investment Adviser intends to engage in SFTR techniques on, amongst other things, equity securities, markets, interest rates,

credit, currencies, commodity indices and other Permitted Investments in line with the exposures set out below (in each case as a percentage of net asset value).

| Type of transaction                                    | Under normal circumstances it is generally expected that the principal amount of such transactions would represent a proportion of the Portfolio's net asset value indicated below.* | Under normal circumstances it is generally expected that the principal amount of the Portfolio's assets that can be subject to the transaction may represent up to a maximum of the proportion of the Portfolio's net asset value indicated below. |
|--------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Total return swaps                                     | 0%                                                                                                                                                                                   | 50%                                                                                                                                                                                                                                                |
| Repurchase, including reverse repurchase, transactions | 0%                                                                                                                                                                                   | 50%                                                                                                                                                                                                                                                |
| Securities lending transactions                        | 2%                                                                                                                                                                                   | 15%                                                                                                                                                                                                                                                |

\*In certain circumstances this proportion may be higher.

### 3. Calculation of Global Exposure and Expected Level of Leverage

The table below sets out for this Portfolio the information mentioned in Section 3 "Goldman Sachs Funds – Calculation of Global Exposure and Expected Level of Leverage" of the Supplement.

| Market Risk Calculation | Limit | Reference Portfolio/Benchmark* | Expected Level of Leverage                     |
|-------------------------|-------|--------------------------------|------------------------------------------------|
|                         |       |                                | Gross Sum of Notionals<br><br>(Gross Exposure) |
| Absolute VaR            | 20%   | ICE BofA 3-month US T-Bill     | 0%-400%**                                      |

\*The Portfolio is actively managed and is not designed to track its Reference Portfolio/Benchmark. Therefore the performance of the Portfolio and the Reference Portfolio/Benchmark may deviate. The Portfolio may offer Share Classes which are denominated in or hedged into currencies other than the Base Currency of the Portfolio. Accordingly, the Reference Portfolio/Benchmark noted above may be denominated in or hedged into the relevant currency of a particular Share Class.

\*\*This expected range of leverage is not a limit and may vary over time as described in the Section 3 "Goldman Sachs – Calculation of Global Exposure and Expected Level of Leverage" of the Supplement. The actual levels may deviate from the stated range.

### 4. Principal Risks of the Portfolio

Investing in the Portfolio implies (without limitation) the following risk factors which are listed in the same order as in the Prospectus:

- 4.2 Investment risks
- 4.4 Investment in debt securities, and in particular 4.4.12 Asset-backed securities, 4.4.13 Mortgage-backed securities and 4.4.14 CBOs and CLOs.
- 4.6 Investment in derivatives
- 4.7 Other investments
- 4.9 Leverage and hedging
- 4.10 Currency risks
- 4.11 Currency hedging.

The Portfolio may be exposed to sustainability risks from time to time. A sustainability risk is defined in the EU Sustainable Finance Disclosure Regulation as an environmental, social or governance event or condition that could cause an actual or a potential material negative impact on the value of investments. The universe of sustainability events or conditions is very broad, and their relevance, materiality and impact on investments will depend on a number of factors such as the investment strategy pursued by the Portfolio, asset class, asset location and asset sector. Depending on the circumstances, examples of sustainability risks can include physical environmental risks, climate change transition risks, supply chain disruptions, improper labour practices, lack of board diversity and corruption. If they materialise, sustainability risks can reduce the value of underlying investments held within the Portfolio and could have a material impact on the performance and returns of the Portfolio.

The Investment Adviser does not operate a risk framework that is specifically tailored to sustainability risks. Rather relevant sustainability risks may be considered as part of the processes adopted by the Investment Adviser to monitor and manage general market risks. Accordingly, the Investment Adviser may integrate sustainability risks in its investment decision making process by having regard to material sustainability events that cause or are reasonably expected to cause broad disruption to economic growth, investor sentiment and asset flows in its ongoing assessment and monitoring of financial markets and the investment risk profile of the Portfolio.

The Investment Adviser may utilise proprietary and/or third-party tools and research to assess and monitor market risks that are relevant to the Portfolio.

Strategies that the Investment Advisers uses within the Portfolio may operate a risk framework tailored towards identifying and managing sustainability risks.

Please refer to the relevant paragraphs of Section 4 “Risk Considerations” in the Prospectus which includes further relevant risk considerations.

## 5. Portfolio Share Class Table

The following table sets out the different Share Classes of the Portfolio and the relevant fees and expenses. For further details on the Share Classes, please refer to Section 3 “Description of Share Classes” of the Prospectus.

| Base Currency:        | USD                                                                                                                                                                                                                                                                                                                                                                                                  |              |                                               |                |                  |                                 |
|-----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|-----------------------------------------------|----------------|------------------|---------------------------------|
| Additional Notes:     | Each type of Share Class listed may also be offered:<br>(i) Denominated in or hedged into other currencies. For a list of available currencies and minimum investment amounts, please refer to Section 2 “Goldman Sachs Funds – Minimum Investment Amount Table” of the Supplement.<br>(ii) As accumulation or distribution classes. Please refer to Section 18 “Dividend Policy” of the Prospectus. |              |                                               |                |                  |                                 |

<sup>1</sup> A Contingent Deferred Sales Charge is imposed on Class C Shares. Please refer to Section 3 “Description of Share Classes” of the Prospectus for further information.

<sup>2</sup> The Portfolio pays transaction costs, including taxes and brokerage commissions, each time it buys and sells securities or instruments and may also pay Borrowing Costs. Shareholders should note that these costs are not reflected in the Portfolio’s operating expenses, but will be reflected in its performance.

## 6. Subscriptions, Redemptions and Exchanges

Subject to the terms outlined in the Prospectus, subscriptions, redemptions and exchanges of Shares of the Portfolio may take place on any Business Day. The cut-off time for subscriptions, redemptions and exchanges of Shares of the Portfolio is 2:00 p.m. Central European time on the same Business Day. Subscription monies are due to be paid within five (5) Business Days following the Subscription Date and redemption proceeds are normally paid within five (5) Business Days following the relevant Redemption Date.

# 16. Goldman Sachs Short Duration Opportunistic Corporate Bond Portfolio

## 1. Investment Objective

The Goldman Sachs Short Duration Opportunistic Corporate Bond (the “Portfolio”) seeks total returns consisting of income and capital appreciation by investing primarily in fixed income securities of corporate issuers domiciled anywhere in the world.

## 2. Investment Policies

The Portfolio will, under normal circumstances, invest at least two thirds of its net assets (excluding cash and cash-equivalents) in fixed income Transferable Securities of corporate issuers domiciled anywhere in the world.

The Portfolio will maintain, under normal circumstances, a duration of three and a half years or less.

The Investment Adviser implements a multi-faceted approach to Environmental, Social and Governance (ESG) considerations (“ESG Criteria”) into its fundamental investment process. Further details of the ESG characteristics of the Portfolio can be found in the Portfolio’s relevant Appendix in Supplement V of the Prospectus.

Fixed income Transferable Securities may include (without limitation) fixed and floating rate, senior and subordinated corporate debt obligations (such as bonds, debentures, notes and commercial paper), mortgage and asset-backed securities, collateralised debt and loan obligations, Money Market Instruments, Brady bonds and other debt issued by governments, their agencies and instrumentalities, or by central banks, convertible debt obligations (including CoCos), and reverse repurchase agreements.

The Portfolio may invest up to 25% of its net assets in convertible debt obligations, including CoCos. For further information on CoCos and the associated risks, please refer to Paragraph 4.4.15 “Contingent Capital Securities (CoCos)” of the Prospectus.

The Portfolio may invest up to 10% of its net assets in equity and/or equity related Transferable Securities. Please note that this limit does not apply to investment in preferred stock.

The Portfolio may invest up to 10% of its net assets in Permitted Funds.

The Portfolio may invest in excess of 20% of its net assets in mortgage and asset-backed securities either directly or indirectly via a financial index, including but not limited to CMBX. The issuers of such mortgage and asset-backed securities may include but are not limited to government agencies and/or government sponsored enterprises and special purpose vehicles sponsored by banks.

The Portfolio may also use financial derivative instruments as part of its investment policy or for hedging purposes. These may include, but are not limited to, foreign currency forward contracts, futures, options (on interest rates, credit and currencies), swaps (including interest rate swaps, credit default swaps and total return swaps) and credit linked instruments. For further information on the use of financial derivative instruments and associated risks, please refer to Appendix C - “Derivatives and Efficient Portfolio Management Techniques” together with Section 4 “Risk Considerations” in the Prospectus.

Investors should be aware that the use of financial derivative instruments in the Portfolio may result in both net long and net short exposures in, amongst other things, interest rates, credit and currencies. For further information on the investment techniques used by the Investment Adviser, please refer to Section 3 “Goldman Sachs Funds - Calculation of Global Exposure and Expected Level of Leverage” of the Supplement.

The Portfolio may also hold bank deposits at sight, such as cash held in current accounts with a bank accessible at any time. Such holdings may only temporarily exceed 20% of the net assets of the Portfolio under exceptionally unfavourable market conditions. Moreover, cash equivalents such as deposits, Money Market Instruments and money market funds may be used for the purpose of cash management and in case of unfavourable conditions, provided that the Investment Adviser considers this to be in the best interests of the Shareholders.

The Investment Adviser intends to engage in SFTR techniques on, amongst other things, equity securities, markets, interest rates, credit, currencies, commodity indices and other Permitted Investments in line with the exposures set out below (in each case as a percentage of net asset value).

| Type of transaction                                    | Under normal circumstances it is generally expected that the principal amount of such transactions would represent a proportion of the Portfolio's net asset value indicated below.* | Under normal circumstances it is generally expected that the principal amount of the Portfolio's assets that can be subject to the transaction may represent up to a maximum of the proportion of the Portfolio's net asset value indicated below. |

\*In certain circumstances this proportion may be higher.

### 3. Calculation of Global Exposure and Expected Level of Leverage

The table below sets out for this Portfolio the information mentioned in Section 3 "Goldman Sachs Funds – Calculation of Global Exposure and Expected Level of Leverage" of the Supplement.

| Market Risk Calculation | Limit | Reference Portfolio/Benchmark* | Expected Level of Leverage                 |
|-------------------------|-------|--------------------------------|--------------------------------------------|
|                         |       |                                | Gross Sum of Notionals<br>(Gross Exposure) |
| Absolute VaR            | 20%   | ICE BofA 3 month US T-Bill     | 0%-100%**                                  |

\*The Portfolio is actively managed and is not designed to track its Reference Portfolio/Benchmark. Therefore the performance of the Portfolio and the Reference Portfolio/Benchmark may deviate. The Portfolio may offer Share Classes which are denominated in or hedged into currencies other than the Base Currency of the Portfolio. Accordingly, the Reference Portfolio/Benchmark noted above may be denominated in or hedged into the relevant currency of a particular Share Class.

\*\*This expected range of leverage is not a limit and may vary over time as described in the Section 3 "Goldman Sachs – Calculation of Global Exposure and Expected Level of Leverage" of the Supplement. The actual levels may deviate from the stated range.

### 4. Principal Risks of the Portfolio

Investing in the Portfolio implies (without limitation) the following risk factors which are listed in the same order as in the Prospectus:

- 4.2 Investment risks
- 4.4 Investment in debt securities
- 4.6 Investment in derivatives
- 4.7 Other investments
- 4.9 Leverage and hedging
- 4.10 Currency risks
- 4.11 Currency hedging.

The Portfolio may be exposed to sustainability risks from time to time. A sustainability risk is defined in the EU Sustainable Finance Disclosure Regulation as an environmental, social or governance event or condition that could cause an actual or a potential material negative impact on the value of investments. The universe of sustainability events or conditions is very broad, and their relevance, materiality and impact on investments will depend on a number of factors such as the investment strategy pursued by the Portfolio, asset class, asset location and asset sector. Depending on the circumstances, examples of sustainability risks can include physical environmental risks, climate change transition risks, supply chain disruptions, improper labour practices, lack of board diversity and corruption. If they materialise, sustainability risks can reduce the value of underlying investments held within the Portfolio and could have a material impact on the performance and returns of the Portfolio.

The Investment Adviser does not operate a risk framework that is specifically tailored to sustainability risks. Rather relevant sustainability risks may be considered as part of the processes adopted by the Investment Adviser to monitor and manage general market risks. Accordingly, the Investment Adviser may integrate sustainability risks in its investment decision making process by having regard to material sustainability events that cause or are reasonably expected to cause broad disruption to economic growth, investor sentiment and asset flows in its ongoing assessment and monitoring of financial markets and the investment risk profile of the Portfolio.

The Investment Adviser may utilise proprietary and/or third-party tools and research to assess and monitor market risks that are relevant to the Portfolio.

Please refer to the relevant paragraphs of Section 4 “Risk Considerations” in the Prospectus which includes further relevant risk considerations.

## 5. Portfolio Share Class Table

The following table sets out the different Share Classes of the Portfolio and relevant fees and expenses. For further details on the Share Classes, please refer to Section 3 “Description of Share Classes” of the Prospectus.

| Base Currency:        | USD                                                                                                                                                                                                                                                                                                                                                                                                  |              |                                               |                |                  |                                 |
|-----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|-----------------------------------------------|----------------|------------------|---------------------------------|
| Additional Notes:     | Each type of Share Class listed may also be offered:<br>(i) Denominated in or hedged into other currencies. For a list of available currencies and minimum investment amounts, please refer to Section 2 “Goldman Sachs Funds – Minimum Investment Amount Table” of the Supplement.<br>(ii) As accumulation or distribution classes. Please refer to Section 18 “Dividend Policy” of the Prospectus. |              |                                               |                |                  |                                 |
| Share Class           | Share Class Currency                                                                                                                                                                                                                                                                                                                                                                                 | Sales Charge | Contingent Deferred Sales Charge <sup>1</sup> | Management Fee | Distribution Fee | Operating Expenses <sup>2</sup> |
| Base Shares           | USD                                                                                                                                                                                                                                                                                                                                                                                                  | Up to 5.50 % | Nil                                           | 1.50 %         | Nil              | Variable                        |

<sup>1</sup> A Contingent Deferred Sales Charge is imposed on Class C Shares. Please refer to Section 3 “Description of Share Classes” of the Prospectus for further information.

<sup>2</sup> The Portfolio pays transaction costs, including taxes and brokerage commissions, each time it buys and sells securities or instruments and may also pay Borrowing Costs. Shareholders should note that these costs are not reflected in the Portfolio's operating expenses, but will be reflected in its performance.

## 6. Subscriptions, Redemptions and Exchanges

Subject to the terms outlined in the Prospectus, subscriptions, redemptions and exchanges of Shares of the Portfolio may take place on any Business Day. The cut-off time for subscriptions, redemptions and exchanges of Shares of the Portfolio is 2:00 p.m. Central European time on the same Business Day.

## 17. Goldman Sachs Sterling Credit Portfolio

### 1. Investment Objective

The Goldman Sachs Sterling Credit Portfolio (the “Portfolio”) seeks total returns consisting of income and capital appreciation by investing primarily in Investment Grade Sterling denominated fixed income securities, with a focus on corporate issuers.

### 2. Investment Policies

The Portfolio will, under normal circumstances, invest at least two thirds of its net assets (excluding cash and cash-equivalents) in Investment Grade Sterling denominated fixed income Transferable Securities of corporate issuers domiciled anywhere in the world. The Portfolio is expected to have a focus on securities of corporate issuers.

The Investment Adviser implements a multi-faceted approach to Environmental, Social and Governance (ESG) considerations (“ESG Criteria”) into its fundamental investment process. Further details of the ESG characteristics of the Portfolio can be found in the Portfolio’s relevant Appendix in Supplement V of the Prospectus.

In addition to the above, the Portfolio may invest up to one third of its net assets in securitised debt, which are not subject to the ESG Criteria as set forth in the Portfolio’s relevant Appendix in Supplement V of the Prospectus.

Fixed income Transferable Securities may include (without limitation) fixed and floating rate, senior and subordinated corporate debt obligations (such as bonds, debentures, notes and commercial paper), mortgage and asset-backed securities, collateralised debt and loan obligations, Money Market Instruments, Brady bonds and other debt issued by governments, their agencies and instrumentalities, or by central banks, convertible debt obligations (including CoCos), and reverse repurchase agreements.

The Portfolio may invest up to 25% of its net assets in convertible debt obligations, including CoCos. For further information on CoCos and the associated risks, please refer to Paragraph 4.4.15 “Contingent Capital Securities (CoCos)” of the Prospectus.

The Portfolio will not invest in equity and/or equity related Transferable Securities, with the exception of (i) shares in other Permitted Funds which do not invest in equity securities, (ii) securities received as part of restructuring or similar event and (iii) preferred stock.

The Portfolio may invest up to 10% of its net assets in Permitted Funds.

The Portfolio may invest up to one third of its net assets in mortgage and asset-backed securities either directly or indirectly via a financial index, including but not limited to CMBX. The issuers of such mortgage and asset-backed securities may include but are not limited to government agencies and/or government sponsored enterprises and special purpose vehicles sponsored by banks.

The Portfolio may also use financial derivative instruments as part of its investment policy or for hedging purposes. These may include, but are not limited to, foreign currency forward contracts, futures, options (on interest rates, credit and currencies), swaps (including interest rate swaps, credit default swaps and total return swaps) and credit linked instruments. For further information on the use of financial derivative instruments and associated risks, please refer to Appendix C - “Derivatives and Efficient Portfolio Management Techniques” together with Section 4 “Risk Considerations” in the Prospectus.

Investors should be aware that the use of financial derivative instruments in the Portfolio may result in both net long and net short exposures in, amongst other things, interest rates, credit and currencies. For further information on the investment techniques used by the Investment Adviser, please refer to Section 3 “Goldman Sachs Funds - Calculation of Global Exposure and Expected Level of Leverage” of the Supplement.

The Portfolio may also hold bank deposits at sight, such as cash held in current accounts with a bank accessible at any time. Such holdings may only temporarily exceed 20% of the net assets of the Portfolio under exceptionally unfavourable market conditions. Moreover, cash equivalents such as deposits, Money Market Instruments and

money market funds may be used for the purpose of cash management and in case of unfavourable conditions, provided that the Investment Adviser considers this to be in the best interests of the Shareholders.

The Investment Adviser intends to engage in SFTR techniques on, amongst other things, equity securities, markets, interest rates, credit, currencies, commodity indices and other Permitted Investments in line with the exposures set out below (in each case as a percentage of net asset value).

| Type of transaction                                    | Under normal circumstances it is generally expected that the principal amount of such transactions would represent a proportion of the Portfolio's net asset value indicated below.* | Under normal circumstances it is generally expected that the principal amount of the Portfolio's assets that can be subject to the transaction may represent up to a maximum of the proportion of the Portfolio's net asset value indicated below. |
|--------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Total return swaps                                     | 0%                                                                                                                                                                                   | 50%                                                                                                                                                                                                                                                |
| Repurchase, including reverse repurchase, transactions | 0%                                                                                                                                                                                   | 50%                                                                                                                                                                                                                                                |
| Securities lending transactions                        | 0%                                                                                                                                                                                   | 15%                                                                                                                                                                                                                                                |

\*In certain circumstances this proportion may be higher.

### 3. Calculation of Global Exposure and Expected Level of Leverage

The table below sets out for this Portfolio the information mentioned in Section 3 "Goldman Sachs Funds – Calculation of Global Exposure and Expected Level of Leverage" of the Supplement.

| Market Risk Calculation | Limit | Reference Portfolio/Benchmark*                      | Expected Level of Leverage                 |
|-------------------------|-------|-----------------------------------------------------|--------------------------------------------|
|                         |       |                                                     | Gross Sum of Notionals<br>(Gross Exposure) |
| Relative VaR            | 2 x   | Iboxx Sterling Non-Gilts Index (Total Return Gross) | 100%-500%**                                |

\*The Portfolio is actively managed and is not designed to track its Reference Portfolio/Benchmark. Therefore the performance of the Portfolio and the Reference Portfolio/Benchmark may deviate. The Portfolio may offer Share Classes which are denominated in or hedged into currencies other than the Base Currency of the Portfolio. Accordingly, the Reference Portfolio/Benchmark noted above may be denominated in or hedged into the relevant currency of a particular Share Class.

\*\*This expected range of leverage is not a limit and may vary over time as described in the Section 3 "Goldman Sachs – Calculation of Global Exposure and Expected Level of Leverage" of the Supplement. The actual levels may deviate from the stated range.

### 4. Principal Risks of the Portfolio

Investing in the Portfolio implies (without limitation) the following risk factors which are listed in the same order as in the Prospectus:

- 4.2 Investment risks and in particular 4.2.8 Sustainable Finance
- 4.4 Investment in debt securities
- 4.6 Investment in derivatives
- 4.7 Other investments
- 4.9 Leverage and hedging
- 4.10 Currency risks
- 4.11 Currency hedging.

The Portfolio may be exposed to sustainability risks from time to time. A sustainability risk is defined in the EU Sustainable Finance Disclosure Regulation as an environmental, social or governance event or condition that could cause an actual or a potential material negative impact on the value of investments. The universe of sustainability events or conditions is very broad, and their relevance, materiality and impact on investments will depend on a number of factors such as the investment strategy pursued by the Portfolio, asset class, asset location and asset sector. Depending on the circumstances, examples of sustainability risks can include physical environmental risks, climate change transition risks, supply chain disruptions, improper labour practices, lack of board diversity and corruption. If they materialise, sustainability risks can reduce the value of underlying investments held within the Portfolio and could have a material impact on the performance and returns of the Portfolio.

The Investment Adviser may integrate sustainability risks in its investment decision making process through the consideration of certain environmental, social and governance matters which may include (without limitation) carbon intensity and emissions profiles, workplace health and safety and cyber risk, stakeholder relations, employee relations, board structure and management incentives.

Sustainability risks may be considered across the investment process as appropriate, by reference to the investment strategy and factors such as the asset classes and sectors within the Portfolio, alongside other factors to assess their potential impact on the quality of a particular investment. The Investment Adviser may utilise proprietary and/or third-party tools and research to assess and monitor sustainability risks that are relevant to the Portfolio, which may also be informed by the Investment Adviser's engagement with issuers.

Please refer to the relevant paragraphs of Section 4 "Risk Considerations" in the Prospectus which includes further relevant risk considerations.

## 5. Portfolio Share Class Table

The following table sets out the different Share Classes of the Portfolio and relevant fees and expenses. For further details on the Share Classes, please refer to Section 3 "Description of Share Classes" of the Prospectus.

| Base Currency:        | GBP                                                                                                                                                                                                                                                                                                                                                                                                  |              |                                               |                |                  |                          |                                 |
|-----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|-----------------------------------------------|----------------|------------------|--------------------------|---------------------------------|
| Additional Notes:     | Each type of Share Class listed may also be offered:<br>(i) Denominated in or hedged into other currencies. For a list of available currencies and minimum investment amounts, please refer to Section 2 "Goldman Sachs Funds – Minimum Investment Amount Table" of the Supplement.<br>(ii) As accumulation or distribution classes. Please refer to Section 18 "Dividend Policy" of the Prospectus. |              |                                               |                |                  |                          |                                 |
| Share Class           | Share Class Currency                                                                                                                                                                                                                                                                                                                                                                                 | Sales Charge | Contingent Deferred Sales Charge <sup>1</sup> | Management Fee | Distribution Fee | Shareholder Services Fee | Operating Expenses <sup>2</sup> |

<sup>1</sup> A Contingent Deferred Sales Charge is imposed on Class B and Class C Shares. Please refer to Section 3 “Description of Share Classes” of the Prospectus for further information.

<sup>2</sup> The Portfolio pays transaction costs, including taxes and brokerage commissions, each time it buys and sells securities or instruments and may also pay Borrowing Costs. Shareholders should note that these costs are not reflected in the Portfolio’s operating expenses but will be reflected in its performance.

## 6. Subscriptions, Redemptions and Exchanges

Subject to the terms outlined in the Prospectus, subscriptions, redemptions and exchanges of Shares of the Portfolio may take place on any Business Day. The cut-off time for subscriptions, redemptions and exchanges of Shares of the Portfolio is 2:00 p.m. Central European time on the same Business Day.

## 18. Goldman Sachs US Dollar Short Duration Bond Portfolio

### 1. Investment Objective

The Goldman Sachs US Dollar Short Duration Bond Portfolio (the “Portfolio”) seeks total returns consisting of income and capital appreciation by investing in Investment Grade short duration fixed income securities, which are primarily denominated in US Dollar.

### 2. Investment Policies

The Portfolio will invest in Investment Grade (at the time of purchase) short duration fixed income Transferable Securities. At least two thirds of the Portfolio’s net assets (excluding cash and cash-equivalents) will be denominated in US Dollar.

The Investment Adviser implements a multi-faceted approach to Environmental, Social and Governance (ESG) considerations (“ESG Criteria”) into its fundamental investment process. Further details of the ESG characteristics of the Portfolio can be found in the Portfolio’s relevant Appendix in Supplement V of the Prospectus.

Fixed income Transferable Securities may include (without limitation) fixed and floating rate, senior and subordinated corporate debt obligations (such as bonds, debentures, notes and commercial paper), mortgage and asset-backed securities, collateralised debt and loan obligations, Money Market Instruments, debt issued by governments, their agencies and instrumentalities, or by central banks, convertible debt obligations, and reverse repurchase agreements.

The Portfolio will maintain, under normal circumstances, an average duration of three years or less.

The Portfolio will not invest in equity and/or equity related Transferable Securities.

The Portfolio may invest up to 10% of its net assets in Permitted Funds.

The Portfolio may invest in excess of 20% of its net assets in mortgage and asset-backed securities either directly or indirectly via a financial index, including but not limited to CMBX. The issuers of such mortgage and asset-backed securities may include but are not limited to government agencies and/or government sponsored enterprises and special purpose vehicles sponsored by banks.

The Portfolio may also use financial derivative instruments as part of its investment policy or for hedging purposes. These may include, but are not limited to, foreign currency forward contracts, futures, options (on interest rates, credit and currencies), swaps (including interest rate swaps, credit default swaps and total return swaps) and credit linked instruments. For further information on the use of financial derivative instruments and associated risks, please refer to Appendix C - “Derivatives and Efficient Portfolio Management Techniques” together with Section 4 “Risk Considerations” in the Prospectus.

Investors should be aware that the use of financial derivative instruments in the Portfolio may result in both net long and net short exposures in, amongst other things, interest rates, credit and currencies. For further information on the investment techniques used by the Investment Adviser, please refer to Section 3 “Goldman Sachs Funds - Calculation of Global Exposure and Expected Level of Leverage” of the Supplement.

The Portfolio may also hold bank deposits at sight, such as cash held in current accounts with a bank accessible at any time. Such holdings may only temporarily exceed 20% of the net assets of the Portfolio under exceptionally unfavourable market conditions. Moreover, cash equivalents such as deposits, Money Market Instruments and money market funds may be used for the purpose of cash management and in case of unfavourable conditions, provided that the Investment Adviser considers this to be in the best interests of the Shareholders.

The Investment Adviser intends to engage in SFTR techniques on, amongst other things, equity securities, markets, interest rates, credit, currencies, commodity indices and other Permitted Investments in line with the exposures set out below (in each case as a percentage of net asset value).

|                                                        |                                                                                                                                                                                      |                                                                                                                                                                                                                                                    |
|--------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Type of transaction                                    | Under normal circumstances it is generally expected that the principal amount of such transactions would represent a proportion of the Portfolio's net asset value indicated below.* | Under normal circumstances it is generally expected that the principal amount of the Portfolio's assets that can be subject to the transaction may represent up to a maximum of the proportion of the Portfolio's net asset value indicated below. |

| Repurchase, including reverse repurchase, transactions | 10%                                                                                                                                                                                  | 50%                                                                                                                                                                                                                                                |
| Securities lending transactions                        | 0%                                                                                                                                                                                   | 15%                                                                                                                                                                                                                                                |

\*In certain circumstances this proportion may be higher.

### 3. Calculation of Global Exposure and Expected Level of Leverage

The table below sets out for this Portfolio the information mentioned in Section 3 "Goldman Sachs Funds – Calculation of Global Exposure and Expected Level of Leverage" of the Supplement.

| Market Risk Calculation | Limit | Reference Portfolio/Benchmark*                                        | Expected Level of Leverage                 |
|-------------------------|-------|-----------------------------------------------------------------------|--------------------------------------------|
|                         |       |                                                                       | Gross Sum of Notionals<br>(Gross Exposure) |
| Relative VaR            | 2 x   | Bloomberg 1-3 Yr Government/Credit Bond Index<br>(Total Return Gross) | 0%-400%**                                  |

\*The Portfolio is actively managed and is not designed to track its Reference Portfolio/Benchmark. Therefore the performance of the Portfolio and the Reference Portfolio/Benchmark may deviate. The Portfolio may offer Share Classes which are denominated in or hedged into currencies other than the Base Currency of the Portfolio. Accordingly, the Reference Portfolio/Benchmark noted above may be denominated in or hedged into the relevant currency of a particular Share Class.

\*\*This expected range of leverage is not a limit and may vary over time as described in the Section 3 "Goldman Sachs – Calculation of Global Exposure and Expected Level of Leverage" of the Supplement. The actual levels may deviate from the stated range.

### 4. Principal risks of the Portfolio

Investing in the Portfolio implies (without limitation) the following risk factors which are listed in the same order as in the Prospectus:

- 4.2 Investment risks
- 4.4 Investment in debt securities
- 4.6 Investment in derivatives
- 4.7 Other investments
- 4.9 Leverage and hedging
- 4.10 Currency risks
- 4.11 Currency hedging.

The Portfolio may be exposed to sustainability risks from time to time. A sustainability risk is defined in the EU Sustainable Finance Disclosure Regulation as an environmental, social or governance event or condition that could cause an actual or a potential material negative impact on the value of investments. The universe of sustainability events or conditions is very broad, and their relevance, materiality and impact on investments will depend on a number of factors such as the investment strategy pursued by the Portfolio, asset class, asset location and asset sector. Depending on the circumstances, examples of sustainability risks can include physical environmental risks, climate change transition risks, supply chain disruptions, improper labour practices, lack of board diversity and corruption. If they materialise, sustainability risks can reduce the value of underlying investments held within the Portfolio and could have a material impact on the performance and returns of the Portfolio.

The Investment Adviser does not operate a risk framework that is specifically tailored to sustainability risks. Rather relevant sustainability risks may be considered as part of the processes adopted by the Investment Adviser to monitor and manage general market risks within the Portfolio. Accordingly, the Investment Adviser may integrate sustainability risks in its investment decision making process by taking account of material sustainability events that cause or are reasonably expected to cause broad disruption to economic growth, investor sentiment and asset flows in its ongoing assessment and monitoring of financial markets and the investment risk profile of the Portfolio.

The Investment Adviser may utilise proprietary and/or third-party tools and research to assess and monitor market risks that are relevant to the Portfolio.

Please refer to the relevant paragraphs of Section 4 “Risk Considerations” in the Prospectus which includes further relevant risk considerations.

## 5. Portfolio Share Class Table

The following table sets out the different Share Classes of the Portfolio and relevant fees and expenses. For further details on the Share Classes, please refer to Section 3 “Description of Share Classes” of the Prospectus.

| Base Currency:        | USD                                                                                                                                                                                                                                                                                                                                                                                                  |              |                                               |                |                  |                          |                                 |
|-----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|-----------------------------------------------|----------------|------------------|--------------------------|---------------------------------|
| Additional Notes:     | Each type of Share Class listed may also be offered:<br>(i) Denominated in or hedged into other currencies. For a list of available currencies and minimum investment amounts, please refer to Section 2 “Goldman Sachs Funds – Minimum Investment Amount Table” of the Supplement.<br>(ii) As accumulation or distribution classes. Please refer to Section 18 “Dividend Policy” of the Prospectus. |              |                                               |                |                  |                          |                                 |

<sup>1</sup> A Contingent Deferred Sales Charge is imposed on Class B and Class C Shares. Please refer to Section 3 “Description of Share Classes” of the Prospectus for further information.

<sup>2</sup> The Portfolio pays transaction costs, including taxes and brokerage commissions, each time it buys and sells securities or instruments and may also pay Borrowing Costs. Shareholders should note that, these costs are not reflected in the Portfolio's operating expenses, but will be reflected in its performance.

## 6. Subscriptions, Redemptions and Exchanges

Subject to the terms outlined in the Prospectus, subscriptions, redemptions and exchanges of Shares of the Portfolio may take place on any Business Day. The cut-off time for subscriptions, redemptions and exchanges of Shares of the Portfolio is 2:00 p.m. Central European time on the same Business Day.

## 19. Goldman Sachs US Fixed Income Portfolio

### 1. Investment Objective

The Goldman Sachs US Fixed Income Portfolio (the “Portfolio”) seeks total returns consisting of income and capital appreciation by investing primarily in Investment Grade fixed income securities of US issuers.

### 2. Investment Policies

The Portfolio will, under normal circumstances, invest at least two thirds of its net assets (excluding cash and cash-equivalents) in Investment Grade fixed income Transferable Securities issued by the US government and by companies that are domiciled in, or derive the predominant proportion of their revenues or profits from the US.

The Investment Adviser implements a multi-faceted approach to Environmental, Social and Governance (ESG) considerations (“ESG Criteria”) into its fundamental investment process. Further details of the ESG characteristics of the Portfolio can be found in the Portfolio’s relevant Appendix in Supplement V of the Prospectus.

Fixed income Transferable Securities may include (without limitation) fixed and floating rate, senior and subordinated corporate debt obligations (such as bonds, debentures, notes and commercial paper), mortgage and asset-backed securities, collateralised debt and loan obligations, Money Market Instruments, Brady bonds and other debt issued by governments, their agencies and instrumentalities, or by central banks, convertible debt obligations (including CoCos), and reverse repurchase agreements.

The Portfolio may invest up to 25% of its net assets in convertible debt obligations, including CoCos. For further information on CoCos and the associated risks, please refer to Paragraph 4.4.15 “Contingent Capital Securities (CoCos)” of the Prospectus.

The Portfolio will not invest in equity and/or equity related Transferable Securities, with the exception of (i) shares in other Permitted Funds which do not invest in equity securities, (ii) securities received as part of restructuring or similar event and (iii) preferred stock.

The Portfolio may invest up to 10% of its net assets in Permitted Funds.

The Portfolio may invest in excess of 20% of its net assets in mortgage and asset-backed securities either directly or indirectly via a financial index, including but not limited to CMBX. The issuers of such mortgage and asset-backed securities may include but are not limited to government agencies and/or government sponsored enterprises and special purpose vehicles sponsored by banks.

The Portfolio may also use financial derivative instruments as part of its investment policy or for hedging purposes. These may include, but are not limited to, foreign currency forward contracts, futures, options (on interest rates, credit and currencies), swaps (including interest rate swaps, credit default swaps and total return swaps) and credit linked instruments. For further information on the use of financial derivative instruments and associated risks, please refer to Appendix C - “Derivatives and Efficient Portfolio Management Techniques” together with Section 4 “Risk Considerations” in the Prospectus.

Investors should be aware that the use of financial derivative instruments in the Portfolio may result in both net long and net short exposures in, amongst other things, interest rates, credit and currencies. For further information on the investment techniques used by the Investment Adviser, please refer to Section 3 “Goldman Sachs Funds - Calculation of Global Exposure and Expected Level of Leverage” of the Supplement.

The Portfolio may also hold bank deposits at sight, such as cash held in current accounts with a bank accessible at any time. Such holdings may only temporarily exceed 20% of the net assets of the Portfolio under exceptionally unfavourable market conditions. Moreover, cash equivalents such as deposits, Money Market Instruments and money market funds may be used for the purpose of cash management and in case of unfavourable conditions, provided that the Investment Adviser considers this to be in the best interests of the Shareholders.

The Investment Adviser intends to engage in SFTR techniques on, amongst other things, equity securities, markets, interest rates, credit, currencies, commodity indices and other Permitted Investments in line with the exposures set out below (in each case as a percentage of net asset value).

| Type of transaction                                    | Under normal circumstances it is generally expected that the principal amount of such transactions would represent a proportion of the Portfolio's net asset value indicated below.* | Under normal circumstances it is generally expected that the principal amount of the Portfolio's assets that can be subject to the transaction may represent up to a maximum of the proportion of the Portfolio's net asset value indicated below. |
|--------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Total return swaps                                     | 0%                                                                                                                                                                                   | 50%                                                                                                                                                                                                                                                |
| Repurchase, including reverse repurchase, transactions | 0%                                                                                                                                                                                   | 50%                                                                                                                                                                                                                                                |
| Securities lending transactions                        | 0%                                                                                                                                                                                   | 15%                                                                                                                                                                                                                                                |

\*In certain circumstances this proportion may be higher.

### 3. Calculation of Global Exposure and Expected Level of Leverage

The table below sets out for this Portfolio the information mentioned in Section 3 "Goldman Sachs Funds – Calculation of Global Exposure and Expected Level of Leverage" of the Supplement.

| Market Risk Calculation | Limit | Reference Portfolio/Benchmark*                         | Expected Level of Leverage                 |
|-------------------------|-------|--------------------------------------------------------|--------------------------------------------|
|                         |       |                                                        | Gross Sum of Notionals<br>(Gross Exposure) |
| Relative VaR            | 2 x   | Bloomberg US Aggregate Bond Index (Total Return Gross) | 0%-400%**                                  |

\*The Portfolio is actively managed and is not designed to track its Reference Portfolio/Benchmark. Therefore the performance of the Portfolio and the Reference Portfolio/Benchmark may deviate. The Portfolio may offer Share Classes which are denominated in or hedged into currencies other than the Base Currency of the Portfolio. Accordingly, the Reference Portfolio/Benchmark noted above may be denominated in or hedged into the relevant currency of a particular Share Class.

\*\*This expected range of leverage is not a limit and may vary over time as described in the Section 3 "Goldman Sachs – Calculation of Global Exposure and Expected Level of Leverage" of the Supplement. The actual levels may deviate from the stated range.

### 4. Principal Risks of the Portfolio

Investing in the Portfolio implies (without limitation) the following risk factors which are listed in the same order as in the Prospectus:

- 4.2 Investment risks
- 4.4 Investment in debt securities
- 4.6 Investment in derivatives
- 4.7 Other investments
- 4.9 Leverage and hedging
- 4.10 Currency risks
- 4.11 Currency hedging.

The Portfolio may be exposed to sustainability risks from time to time. A sustainability risk is defined in the EU Sustainable Finance Disclosure Regulation as an environmental, social or governance event or condition that could cause an actual or a potential material negative impact on the value of investments. The universe of sustainability events or conditions is very broad, and their relevance, materiality and impact on investments will depend on a number of factors such as the investment strategy pursued by the Portfolio, asset class, asset location and asset sector. Depending on the circumstances, examples of sustainability risks can include physical environmental risks, climate change transition risks, supply chain disruptions, improper labour practices, lack of board diversity and corruption. If they materialise, sustainability risks can reduce the value of underlying investments held within the Portfolio and could have a material impact on the performance and returns of the Portfolio.

The Investment Adviser does not operate a risk framework that is specifically tailored to sustainability risks. Rather relevant sustainability risks may be considered as part of the processes adopted by the Investment Adviser to monitor

and manage general market risks. Accordingly, the Investment Adviser may integrate sustainability risks in its investment decision making process by having regard to material sustainability events that cause or are reasonably expected to cause broad disruption to economic growth, investor sentiment and asset flows in its ongoing assessment and monitoring of financial markets and the investment risk profile of the Portfolio.

The Investment Adviser may utilise proprietary and/or third-party tools and research to assess and monitor market risks that are relevant to the Portfolio.

Please refer to the relevant paragraphs of Section 4 “Risk Considerations” in the Prospectus which includes further relevant risk considerations.

## 5. Portfolio Share Class Table

The following table sets out the different Share Classes of the Portfolio and relevant fees and expenses. For further details on the Share Classes, please refer to Section 3 “Description of Share Classes” of the Prospectus.

| Base Currency:        | USD                                                                                                                                                                                                                                                                                                                                                                                                                 |              |                                               |                |                  |                          |                                 |
|-----------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|-----------------------------------------------|----------------|------------------|--------------------------|---------------------------------|
| Additional Notes:     | <p>Each type of Share Class listed may also be offered:</p> <p>(i) Denominated in or hedged into other currencies. For a list of available currencies and minimum investment amounts, please refer to Section 2 “Goldman Sachs Funds – Minimum Investment Amount Table” of the Supplement.</p> <p>(ii) As accumulation or distribution classes. <sup>1</sup> A Contingent Deferred Sales Charge is imposed on Class B and Class C Shares. Please refer to Section 3 “Description of Share Classes” of the Prospectus for further information.

<sup>2</sup> The Portfolio pays transaction costs, including taxes and brokerage commissions, each time it buys and sells securities or instruments and may also pay Borrowing Costs. Shareholders should note that these costs are not reflected in the Portfolio’s operating expenses, but will be reflected in its performance.

## 6. Subscriptions, Redemptions and Exchanges

Subject to the terms outlined in the Prospectus, subscriptions, redemptions and exchanges of Shares of the Portfolio may take place on any Business Day. The cut-off time for subscriptions, redemptions and exchanges of Shares of the Portfolio is 2:00 p.m. Central European time on the same Business Day.

## 20. Goldman Sachs US Mortgage Backed Securities Portfolio

### 1. Investment Objective

The Goldman Sachs US Mortgage Backed Securities Portfolio (the “Portfolio”) seeks total returns consisting of income and capital appreciation by investing primarily in U.S. mortgage backed securities and asset backed securities.

### 2. Investment Policies

The Portfolio will, under normal circumstances, invest at least two thirds of its net assets (excluding cash and cash-equivalents) in U.S mortgage backed securities and asset backed securities. In relation to Article 7 of SFDR, which requires disclosure of how principal adverse impacts are considered at Portfolio level, the Investment Manager notes that there are still a number of uncertainties regarding this obligation, in particular due to the absence of centralised implementing standards, local guidance or established market practice. The Investment Manager does not currently take principal adverse impacts on sustainability factors into account in respect of the Portfolio, but will keep its approach in this area for the Portfolio under review.

As per Article 7 of the Taxonomy Regulation, Shareholders should note that investments underlying the Portfolios do not take into account the EU criteria for environmentally sustainable economic activities. Fixed income Transferable Securities may include (without limitation) fixed and floating rate, senior and subordinated corporate debt obligations (such as bonds, debentures, notes and commercial paper), mortgage and asset-backed securities, collateralised debt and loan obligations, Money Market Instruments, Brady bonds and other debt issued by governments, their agencies and instrumentalities, or by central banks, convertible debt obligations (including CoCos), and reverse repurchase agreements.

The Portfolio may invest up to 25% of its net assets in convertible debt obligations, including CoCos. For further information on CoCos and the associated risks, please refer to Paragraph 4.4.15 “Contingent Capital Securities (CoCos)” of the Prospectus.

The Portfolio will not invest in equity and/or equity related Transferable Securities, with the exception of (i) shares in other Permitted Funds which do not invest in equity securities, (ii) securities received as part of restructuring or similar event and (iii) preferred stock.

The Portfolio may invest up to 10% of its net assets in Permitted Funds.

The Portfolio may invest in excess of 20% of its net assets in mortgage and asset-backed securities either directly or indirectly via a financial index, including but not limited to CMBX. The issuers of such mortgage and asset-backed securities may include but are not limited to government agencies and/or government sponsored enterprises and special purpose vehicles sponsored by banks.

The Portfolio may also use financial derivative instruments as part of its investment policy or for hedging purposes. These may include, but are not limited to, foreign currency forward contracts, futures, options (on interest rates, credit and currencies), swaps (including interest rate swaps, credit default swaps and total return swaps) and credit linked instruments. For further information on the use of financial derivative instruments and associated risks, please refer to Appendix C - “Derivatives and Efficient Portfolio Management Techniques” together with Section 4 “Risk Considerations” in the Prospectus.

Investors should be aware that the use of financial derivative instruments in the Portfolio may result in both net long and net short exposures in, amongst other things, interest rates, credit and currencies. For further information on the investment techniques used by the Investment Adviser, please refer to Section 3 “Goldman Sachs Funds - Calculation of Global Exposure and Expected Level of Leverage” of the Supplement.

The Portfolio may also hold bank deposits at sight, such as cash held in current accounts with a bank accessible at any time. Such holdings may only temporarily exceed 20% of the net assets of the Portfolio under exceptionally unfavourable market conditions. Moreover, cash equivalents such as deposits, Money Market Instruments and money market funds may be used for the purpose of cash management and in case of unfavourable conditions, provided that the Investment Adviser considers this to be in the best interests of the Shareholders.

The Investment Adviser intends to engage in SFTR techniques on, amongst other things, equity securities, markets, interest rates, credit, currencies, commodity indices and other Permitted Investments in line with the exposures set out below (in each case as a percentage of net asset value).

| Type of transaction                                    | Under normal circumstances it is generally expected that the principal amount of such transactions would represent a proportion of the Portfolio's net asset value indicated below.* | Under normal circumstances it is generally expected that the principal amount of the Portfolio's assets that can be subject to the transaction may represent up to a maximum of the proportion of the Portfolio's net asset value indicated below. |
|--------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Total return swaps                                     | 0%                                                                                                                                                                                   | 50%                                                                                                                                                                                                                                                |
| Repurchase, including reverse repurchase, transactions | 0%                                                                                                                                                                                   | 50%                                                                                                                                                                                                                                                |
| Securities lending transactions                        | 0%                                                                                                                                                                                   | 15%                                                                                                                                                                                                                                                |

\*In certain circumstances this proportion may be higher.

### 3. Calculation of Global Exposure and Expected Level of Leverage

The table below sets out for this Portfolio the information mentioned in Section 3 "Goldman Sachs Funds – Calculation of Global Exposure and Expected Level of Leverage" of the Supplement.

| Market Risk Calculation | Limit | Reference Portfolio/Benchmark*                      | Expected Level of Leverage                 |
|-------------------------|-------|-----------------------------------------------------|--------------------------------------------|
|                         |       |                                                     | Gross Sum of Notionals<br>(Gross Exposure) |
| Relative VaR            | 2 x   | Bloomberg US Securitised Index (Total Return Gross) | 0%-200%**                                  |

\*The Portfolio is actively managed and is not designed to track its Reference Portfolio/Benchmark. Therefore the performance of the Portfolio and the Reference Portfolio/Benchmark may deviate. The Portfolio may offer Share Classes which are denominated in or hedged into currencies other than the Base Currency of the Portfolio. Accordingly, the Reference Portfolio/Benchmark noted above may be denominated in or hedged into the relevant currency of a particular Share Class.

\*\*This expected range of leverage is not a limit and may vary over time as described in the Section 3 "Goldman Sachs – Calculation of Global Exposure and Expected Level of Leverage" of the Supplement. The actual levels may deviate from the stated range.

### 4. Principal Risks of the Portfolio

Investing in the Portfolio implies (without limitation) the following risk factors which are listed in the same order as in the Prospectus:

- 4.2 Investment risks
- 4.4 Investment in debt securities
- 4.6 Investment in derivatives
- 4.7 Other investments
- 4.9 Leverage and hedging
- 4.10 Currency risks
- 4.11 Currency hedging.

The Portfolio may be exposed to sustainability risks from time to time. A sustainability risk is defined in the EU Sustainable Finance Disclosure Regulation as an environmental, social or governance event or condition that could cause an actual or a potential material negative impact on the value of investments. The universe of sustainability events or conditions is very broad, and their relevance, materiality and impact on investments will depend on a number of factors such as the investment strategy pursued by the Portfolio, asset class, asset location and asset sector. Depending on the circumstances, examples of sustainability risks can include physical environmental risks, climate change transition risks, supply chain disruptions, improper labour practices, lack of board diversity and corruption. If they materialise, sustainability risks can reduce the value of underlying investments held within the Portfolio and could have a material impact on the performance and returns of the Portfolio.

The Investment Adviser does not operate a risk framework that is specifically tailored to sustainability risks. Rather relevant sustainability risks may be considered as part of the processes adopted by the Investment Adviser to monitor and manage general market risks. Accordingly, the Investment Adviser may integrate sustainability risks in its investment decision making process by having regard to material sustainability events that cause or are reasonably expected to cause broad disruption to economic growth, investor sentiment and asset flows in its ongoing assessment and monitoring of financial markets and the investment risk profile of the Portfolio.

The Investment Adviser may utilise proprietary and/or third-party tools and research to assess and monitor market risks that are relevant to the Portfolio.

Please refer to the relevant paragraphs of Section 4 “Risk Considerations” in the Prospectus which includes further relevant risk considerations.

## 5. Portfolio Share Class Table

The following table sets out the different Share Classes of the Portfolio and relevant fees and expenses. For further details on the Share Classes, please refer to Section 3 “Description of Share Classes” of the Prospectus.

| Base Currency:        | USD                                                                                                                                                                                                                                                                                                                                                                                                                 |              |                                               |                |                  |                          |                                 |
|-----------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|-----------------------------------------------|----------------|------------------|--------------------------|---------------------------------|
| Additional Notes:     | <p>Each type of Share Class listed may also be offered:</p> <p>(i) Denominated in or hedged into other currencies. For a list of available currencies and minimum investment amounts, please refer to Section 2 “Goldman Sachs Funds – Minimum Investment Amount Table” of the Supplement.</p> <p>(ii) As accumulation or distribution classes. Please refer to Section 18 “Dividend Policy” of the Prospectus.</p> |              |                                               |                |                  |                          |                                 |

<sup>1</sup> A Contingent Deferred Sales Charge is imposed on Class B and Class C Shares. Please refer to Section 3 “Description of Share Classes” of the Prospectus for further information.

<sup>2</sup> The Portfolio pays transaction costs, including taxes and brokerage commissions, each time it buys and sells securities or instruments and may also pay Borrowing Costs. Shareholders should note that these costs are not reflected in the Portfolio’s operating expenses, but will be reflected in its performance.

## 6. Subscriptions, Redemptions and Exchanges

Subject to the terms outlined in the Prospectus, subscriptions, redemptions and exchanges of Shares of the Portfolio may take place on any Business Day. The cut-off time for subscriptions, redemptions and exchanges of Shares of the Portfolio is 2:00 p.m. Central European time on the same Business Day.

## Part III: Flexible Portfolios

### 1. Goldman Sachs ESG-Enhanced Global Multi-Asset Balanced Portfolio

#### 1. Investment Objective

The Goldman Sachs ESG-Enhanced Global Multi-Asset Balanced Portfolio (the “Portfolio”) seeks total returns consisting of income and capital appreciation by investing primarily in global equity and fixed income securities.

#### 2. Investment Policies

The Portfolio will, under normal circumstances, invest at least two thirds of its net assets in equity and/or equity related Transferable Securities and fixed income Transferable Securities of issuers located anywhere in the world. The Portfolio may hold up to 80% of its assets in equity securities, and up to 80% of its assets in fixed income securities. The Portfolio may invest directly in such securities and/or through Permitted Funds.

Equity and equity related Transferable Securities may include common stock, preferred stock, warrants and other rights to acquire stock, ADRs, EDRs and GDRs.

Fixed income Transferable Securities may include (without limitation) fixed and floating rate, senior and subordinated corporate debt obligations (such as bonds, debentures, notes and commercial paper), mortgage and asset-backed securities, collateralised debt and loan obligations, Money Market Instruments, Brady bonds and other debt issued by governments, their agencies and instrumentalities, or by central banks, convertible debt obligations (including CoCos) and reverse repurchase agreements. The Portfolio may not invest in excess of 20% of its net assets in mortgage and asset-backed securities.

The Portfolio’s exposures may include traditional asset class exposures, including but not limited to, global large and small cap equities, emerging markets equity, public real estate and infrastructure investments, infrastructure, commodities, global government and corporate bonds, high yield, emerging market debt as well as non-traditional exposures, including but not limited to, systematic trend following strategies across markets, alternative risk premia strategies (which may include equity volatility selling strategies, FX value and carry oriented strategies, interest rate risk premia and carry related strategies) and macro and/or credit focused absolute return oriented or long-short equity strategies.

The Investment Adviser will seek to implement investment ideas that are generally derived from its short-term or medium-term market views, on a variety of asset classes and instruments (“Tactical Exposures”). The Investment Adviser will generally seek to implement its Tactical Exposures through the use of ETFs, financial derivative instruments, or active investment strategies.

The Investment Adviser implements a multi-faceted approach to Environmental, Social and Governance (ESG) considerations (“ESG Criteria”) into its fundamental investment process. Further details of the ESG characteristics of the Portfolio can be found in the Portfolio’s relevant Appendix in Supplement V of the Prospectus.

The Portfolio may invest in excess of 10% of its net assets in Permitted Funds. Where the Portfolio invests a substantial proportion of its assets in Permitted Funds, the sum of management fees levied by such Permitted Funds shall not exceed 2.5% of the Portfolio’s assets invested. Investors should also be aware that Permitted Funds may also charge performance fees.

The Portfolio may also use financial derivative instruments as part of its investment policy or for hedging purposes. These may include but are not limited to, foreign currency forward contracts, futures, options (on equity securities and markets, interest rates, credit and currencies), swaps (including equity swaps, interest rate swaps, credit default swaps and total return swaps) and credit linked instruments. For further information on the use of financial derivative instruments and the associated risks, please refer to Appendix C - “Derivatives and Efficient Portfolio Management Techniques” together with Section 4 “Risk Considerations” in the Prospectus.

Investors should be aware that the use of financial derivative instruments in the Portfolio may result in both net long and net short exposures in, amongst other things, interest rates, credit and currencies. For further information on the investment techniques used by the Investment Adviser, please refer to Section 3 “Goldman Sachs Funds - Calculation of Global Exposure and Expected Level of Leverage” of the Supplement.

The Portfolio may also hold bank deposits at sight, such as cash held in current accounts with a bank accessible at any time. Such holdings may only temporarily exceed 20% of the net assets of the Portfolio under exceptionally unfavourable market conditions. Moreover, cash equivalents such as deposits, Money Market Instruments and money market funds may be used for the purpose of cash management and in case of unfavourable conditions, provided that the Investment Adviser considers this to be in the best interests of the Shareholders.

The Investment Adviser intends to engage in SFTR techniques on, amongst other things, equity securities, markets, interest rates, credit, currencies, commodity indices and other Permitted Investments in line with the exposures set out below (in each case as a percentage of net asset value).

| Type of transaction                                    | Under normal circumstances it is generally expected that the principal amount of such transactions would represent a proportion of the Portfolio's net asset value indicated below.* | Under normal circumstances it is generally expected that the principal amount of the Portfolio's assets that can be subject to the transaction may represent up to a maximum of the proportion of the Portfolio's net asset value indicated below. |
|--------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Total return swaps                                     | 2%                                                                                                                                                                                   | 50%                                                                                                                                                                                                                                                |
| Repurchase, including reverse repurchase, transactions | 0%                                                                                                                                                                                   | 50%                                                                                                                                                                                                                                                |
| Securities lending transactions                        | 0%                                                                                                                                                                                   | 15%                                                                                                                                                                                                                                                |

\*In certain circumstances this proportion may be higher.

### 3. Calculation of Global Exposure and Expected Level of Leverage

The table below sets out for this Portfolio the information mentioned in Section 3 “Goldman Sachs Funds – Calculation of Global Exposure and Expected Level of Leverage” of the Supplement.

| Market Risk Calculation | Limit | Reference Portfolio/Benchmark*                                                                                                    | Expected Level of Leverage                 |
|-------------------------|-------|-----------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------|
|                         |       |                                                                                                                                   | Gross Sum of Notionals<br>(Gross Exposure) |
| Relative VaR            | 2 x   | 50% Bloomberg Global Aggregate Index (Total Return Gross) (USD Hedged) / 50% MSCI World Index (Total Return Net) (50% USD Hedged) | 0%-800%**                                  |

\*The Portfolio is actively managed and is not designed to track its Reference Portfolio/Benchmark. Therefore the performance of the Portfolio and the Reference Portfolio/Benchmark may deviate. The Portfolio may offer Share Classes which are denominated in or hedged into currencies other than the Base Currency of the Portfolio. Accordingly, the Reference Portfolio/Benchmark noted above may be denominated in or hedged into the relevant currency of a particular Share Class.

\*\*This expected range of leverage is not a limit and may vary over time as described below. The actual levels may deviate from the stated range.

Given that many of the strategies used by the Portfolio are implemented through the use of financial derivative instruments, including those referred to in Section 3 “Goldman Sachs Funds - Calculation of Global Exposure and Expected Level of Leverage” of the Supplement, the expected level of leverage, as calculated under the gross sum of notionals exposures, may be relatively high. This is particularly emphasised by the use of Eurodollar futures, interest rate futures, swaps, options and futures and forward currency contracts, which result in relatively higher levels of notional exposure from such financial derivative instruments. It also means that the expected level of leverage may exceed the stated range, particularly as a result of effecting certain investment exposures and also as a result of investor redemptions that can result in offsetting financial derivative instruments trades being placed which whilst they reduce investment exposure can increase leverage based on the gross sum of notionals calculation.

Shareholders should note that leverage resulting from the use of financial derivative instruments may result in magnified losses. However, the “Expected Level of Leverage” using the gross sum of notionals in the table above

does not necessarily provide an appropriate illustration of the overall risk profile of the Portfolio as financial derivative instruments are used to manage risk as well as to seek return. This is largely due to the fact that the gross sum of notional exposure calculation simply aggregates the absolute sum of all long and short financial derivative instrument positions, even if the financial derivative instruments are for hedging or offsetting purposes. Further the gross sum of notional calculation uses just notional values rather than measures that calculate the overall contributions to risk which will often explain why the leverage levels under this method appear high. By way of illustration, to achieve a desired level of investment risk in interest rate markets, the amount of gross leverage used to achieve this risk will vary significantly depending on the underlying market risk (or 'duration') of the instrument chosen to implement this investment decision. For example, using an instrument with less duration risk - such as a shorter maturity interest rate derivative - requires more leverage to achieve the higher amount of required notional market exposure, compared to using a longer maturity instrument with higher duration risk. In this example, a 2 year maturity interest rate derivative would require approximately 4 times as much notional exposure compared to using a 10 year maturity instrument.

Please refer to Paragraph 1 "Investment Objective" and Paragraph 2 "Investment Policies" of this Appendix for further information on the relevant Portfolio's strategy and the Synthetic Risk and Reward Indicator (SRRI) in the KIID of the Portfolio for details on such Portfolio's historic risk profile where applicable. Further details on the average leverage levels, as calculated using the gross sum of notional exposures, will be disclosed in the Fund's annual financial statements for the relevant accounting period.

#### **4. Principal Risks of the Portfolio**

Investing in the Portfolio implies (without limitation) the following risk factors which are listed in the same order as in the Prospectus:

- 4.2 Investment risks (and in particular 4.2.8 Sustainable Finance)
- 4.4 Investment in debt securities
- 4.6 Investment in derivatives
- 4.7 Other investments
- 4.9 Leverage and hedging
- 4.10 Currency risks
- 4.11 Currency hedging.

The Portfolio may be exposed to sustainability risks from time to time. A sustainability risk is defined in the EU Sustainable Finance Disclosure Regulation as an environmental, social or governance event or condition that could cause an actual or a potential material negative impact on the value of investments. The universe of sustainability events or conditions is very broad, and their relevance, materiality and impact on investments will depend on a number of factors such as the investment strategy pursued by the Portfolio, asset class, asset location and asset sector. Depending on the circumstances, examples of sustainability risks can include physical environmental risks, climate change transition risks, supply chain disruptions, improper labour practices, lack of board diversity and corruption. If they materialise, sustainability risks can reduce the value of underlying investments held within the Portfolio and could have a material impact on the performance and returns of the Portfolio. The Investment Adviser may integrate sustainability risks in its investment decision making process through the consideration of certain environmental, social and governance matters which may include (without limitation) carbon intensity and emissions profiles, workplace health and safety and cyber risk, stakeholder relations, employee relations, board structure and management incentives. Sustainability risks may be considered across the investment process as appropriate, by reference to the investment strategy and factors such as the asset classes and sectors within the Portfolio, alongside other factors to assess their potential impact on the quality of a particular investment. The Investment Adviser may utilise proprietary and/or third-party tools and research to assess and monitor sustainability risks that are relevant to the Portfolio.

Please refer to the relevant paragraphs of Section 4 "Risk Considerations" in the Prospectus which includes further relevant risk considerations.

#### **5. Portfolio Share Class Table**

The following table sets out the different Share Classes of the Portfolio and the relevant fees and expenses. For further details on the Share Classes, please refer to Section 3 "Description of Share Classes" of the Prospectus.

| Base Currency:        | USD                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |              |                                               |                |                  |                                 |
|-----------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|-----------------------------------------------|----------------|------------------|---------------------------------|
| Additional Notes:     | <p>Each type of Share Class listed may also be offered:</p> <p>(i) Denominated in or hedged into other currencies. For a list of available currencies and minimum investment amounts, please refer to Section 2 "Goldman Sachs Funds – Minimum Investment Amount Table" of the Supplement.</p> <p>(ii) As Partially Hedged Share Classes. Please refer to Paragraph 3.23 "Currency Hedged Share Classes Share Classes" of the Prospectus.</p> <p>(iii) As accumulation or distribution classes. Please refer to Section 18 "Dividend Policy" of the Prospectus.</p> |              |                                               |                |                  |                                 |

<sup>1</sup> A Contingent Deferred Sales Charge is imposed on Class C Shares. Please refer to Section 3 "Description of Share Classes" of the Prospectus for further information.

<sup>2</sup> The Portfolio pays transaction costs, including taxes and brokerage commissions, each time it buys and sells securities or instruments and may also pay Borrowing Costs. Shareholders should note that these costs are not reflected in the Portfolio's operating expenses, but will be reflected in its performance.

## 6. Subscriptions, Redemptions and Exchanges

Subject to the terms outlined in the Prospectus, subscriptions, redemptions and exchanges of Shares of the Portfolio may take place on any Business Day. The cut-off time for subscriptions, redemptions and exchanges of Shares of the Portfolio is 12:00 noon Central European time on the same Business Day.

Investors should be aware that redemption proceeds, less any tax or duty imposed on the redemption of the Shares, will normally be paid within four (4) Business Days following the relevant Redemption Date.

## 2. Goldman Sachs Global Multi-Asset Conservative Portfolio

### 1. Investment Objective

The Goldman Sachs Global Multi-Asset Conservative Portfolio (the “Portfolio”) seeks total returns consisting of income and capital appreciation by investing primarily in global equity and fixed income securities, with a focus on fixed income securities.

### 2. Investment Policies

The Portfolio will, under normal circumstances, invest at least two thirds of its net assets in equity and/or equity related Transferable Securities and fixed income Transferable Securities of issuers located anywhere in the world. The Portfolio may hold up to 60% of its assets in equity securities, and up to 95% of its assets in fixed income securities. The Portfolio will invest directly in such securities and/or through Permitted Funds.

Equity and equity related Transferable Securities may include common stock, preferred stock, warrants and other rights to acquire stock, ADRs, EDRs and GDRs.

The Investment Adviser implements a multi-faceted approach to Environmental, Social and Governance (ESG) considerations (“ESG Criteria”) into its fundamental investment process. Further details of the ESG characteristics of the Portfolio can be found in the Portfolio’s relevant Appendix in Supplement V of the Prospectus.

The Portfolio may also gain exposure to investments, including but not limited to, derivatives, ETFs and other funds which do not apply the environmental, social and governance criteria outlined in the Portfolio’s relevant Appendix in Supplement V of the Prospectus.

Fixed income Transferable Securities may include (without limitation) fixed and floating rate, senior and subordinated corporate debt obligations (such as bonds, debentures, notes and commercial paper), mortgage and asset-backed securities, collateralised debt and loan obligations, Money Market Instruments, Brady bonds and other debt issued by governments, their agencies and instrumentalities, or by central banks, convertible debt obligations (including CoCos) and reverse repurchase agreements. The Portfolio may not invest in excess of 20% of its net assets in mortgage and asset-backed securities.

The Portfolio’s exposures may include traditional asset class exposures, including but not limited to, global large and small cap equities, emerging markets equity, public real estate and infrastructure investments, infrastructure, commodities, global government and corporate bonds, high yield, emerging market debt as well as non-traditional exposures, including but not limited to, systematic trend following strategies across markets, alternative risk premia strategies (which may include equity volatility selling strategies, FX value and carry oriented strategies, interest rate risk premia and carry related strategies) and macro and/or credit focused absolute return oriented or long-short equity strategies.

The Investment Adviser will seek to implement investment ideas that are generally derived from its short-term or medium-term market views, on a variety of asset classes and instruments (“Tactical Exposures”). The Investment Adviser will generally seek to implement its Tactical Exposures through the use of ETFs, financial derivative instruments, or active investment strategies.

The Portfolio may invest in excess of 10% of its net assets in Permitted Funds. Where the Portfolio invests a substantial proportion of its assets in Permitted Funds, the sum of management fees levied by such Permitted Funds shall not exceed 2.5% of the Portfolio’s assets invested. Investors should also be aware that Permitted Funds may also charge performance fees.

The Portfolio may also use financial derivative instruments as part of its investment policy or for hedging purposes. These may include but are not limited to, foreign currency forward contracts, futures, options (on equity securities and markets, interest rates, credit and currencies), swaps (including equity swaps, interest rate swaps, credit default swaps and total return swaps) and credit linked instruments. For further information on the use of financial derivative instruments and the associated risks, please refer to Appendix C - “Derivatives and Efficient Portfolio Management Techniques” together with Section 4 “Risk Considerations” in the Prospectus.

Investors should be aware that the use of financial derivative instruments in the Portfolio may result in both net long and net short exposures in, amongst other things, interest rates, credit and currencies. For further information on the investment techniques used by the Investment Adviser, please refer to Section 3 “Goldman Sachs Funds - Calculation of Global Exposure and Expected Level of Leverage” of the Supplement.

The Portfolio may also hold bank deposits at sight, such as cash held in current accounts with a bank accessible at any time. Such holdings may only temporarily exceed 20% of the net assets of the Portfolio under exceptionally unfavourable market conditions. Moreover, cash equivalents such as deposits, Money Market Instruments and money market funds may be used for the purpose of cash management and in case of unfavourable conditions, provided that the Investment Adviser considers this to be in the best interests of the Shareholders.

The Investment Adviser intends to engage in SFTR techniques on, amongst other things, equity securities, markets, interest rates, credit, currencies, commodity indices and other Permitted Investments in line with the exposures set out below (in each case as a percentage of net asset value).

| Type of transaction                                    | Under normal circumstances it is generally expected that the principal amount of such transactions would represent a proportion of the Portfolio's net asset value indicated below.* | Under normal circumstances it is generally expected that the principal amount of the Portfolio's assets that can be subject to the transaction may represent up to a maximum of the proportion of the Portfolio's net asset value indicated below. |
|--------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Total return swaps                                     | 0%                                                                                                                                                                                   | 50%                                                                                                                                                                                                                                                |
| Repurchase, including reverse repurchase, transactions | 0%                                                                                                                                                                                   | 50%                                                                                                                                                                                                                                                |
| Securities lending transactions                        | 0%                                                                                                                                                                                   | 15%                                                                                                                                                                                                                                                |

\*In certain circumstances this proportion may be higher.

### 3. Calculation of Global Exposure and Expected Level of Leverage

The table below sets out for this Portfolio the information mentioned in Section 3 “Goldman Sachs Funds – Calculation of Global Exposure and Expected Level of Leverage” of the Supplement.

| Market Risk Calculation | Limit | Reference Portfolio/Benchmark*                                                                                                    | Expected Level of Leverage                 |
|-------------------------|-------|-----------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------|
|                         |       |                                                                                                                                   | Gross Sum of Notionals<br>(Gross Exposure) |
| Relative VaR            | 2 x   | 70% Bloomberg Global Aggregate Index (Total Return Gross) (USD Hedged) / 30% MSCI World Index (Total Return Net) (50% USD Hedged) | 0%-800%**                                  |

\*The Portfolio is actively managed and is not designed to track its Reference Portfolio/Benchmark. Therefore the performance of the Portfolio and the Reference Portfolio/Benchmark may deviate. The Portfolio may offer Share Classes which are denominated in or hedged into currencies other than the Base Currency of the Portfolio. Accordingly, the Reference Portfolio/Benchmark noted above may be denominated in or hedged into the relevant currency of a particular Share Class.

\*\*This expected range of leverage is not a limit and may vary over time as described below. The actual levels may deviate from the stated range.

Given that many of the strategies used by the Portfolio are implemented through the use of financial derivative instruments, including those referred to in Section 3 “Goldman Sachs Funds - Calculation of Global Exposure and Expected Level of Leverage” of the Supplement, the expected level of leverage, as calculated under the gross sum of notionals exposures, may be relatively high. This is particularly emphasised by the use of Eurodollar futures, interest rate futures, swaps, options and futures and forward currency contracts, which result in relatively higher levels of notional exposure from such financial derivative instruments. It also means that the expected level of leverage may exceed the stated range, particularly as a result of effecting certain investment exposures and also as a result of investor redemptions that can result in offsetting financial derivative instruments trades being placed which whilst they reduce investment exposure can increase leverage based on the gross sum of notionals calculation.

Shareholders should note that leverage resulting from the use of financial derivative instruments may result in magnified losses. However, the “Expected Level of Leverage” using the gross sum of notionals in the table above does not necessarily provide an appropriate illustration of the overall risk profile of the Portfolio as financial derivative instruments are used to manage risk as well as to seek return. This is largely due to the fact that the gross sum of notional exposure calculation simply aggregates the absolute sum of all long and short financial derivative instrument positions, even if the financial derivative instruments are for hedging or offsetting purposes. Further the gross sum of notionals calculation uses just notional values rather than measures that calculate the overall contributions to risk which will often explain why the leverage levels under this method appear high. By way of illustration, to achieve a desired level of investment risk in interest rate markets, the amount of gross leverage used to achieve this risk will vary significantly depending on the underlying market risk (or ‘duration’) of the instrument chosen to implement this investment decision. For example, using an instrument with less duration risk - such as a shorter maturity interest rate derivative - requires more leverage to achieve the higher amount of required notional market exposure, compared to using a longer maturity instrument with higher duration risk. In this example, a 2 year maturity interest rate derivative would require approximately 4 times as much notional exposure compared to using a 10 year maturity instrument.

Please refer to Paragraph 1 “Investment Objective” and Paragraph 2 “Investment Policies” of this Appendix for further information on the relevant Portfolio’s strategy and the Synthetic Risk and Reward Indicator (SRRI) in the KIID of the Portfolio for details on such Portfolio’s historic risk profile where applicable. Further details on the average leverage levels, as calculated using the gross sum of notionals exposures, will be disclosed in the Fund’s annual financial statements for the relevant accounting period.

#### **4. Principal Risks of the Portfolio**

Investing in the Portfolio implies (without limitation) the following risk factors which are listed in the same order as in the Prospectus:

- 4.2 Investment risks
- 4.4 Investment in debt securities
- 4.6 Investment in derivatives
- 4.7 Other investments
- 4.9 Leverage and hedging
- 4.10 Currency risks
- 4.11 Currency hedging.

The Portfolio may be exposed to sustainability risks from time to time. A sustainability risk is defined in the EU Sustainable Finance Disclosure Regulation as an environmental, social or governance event or condition that could cause an actual or a potential material negative impact on the value of investments. The universe of sustainability events or conditions is very broad, and their relevance, materiality and impact on investments will depend on a number of factors such as the investment strategy pursued by the Portfolio, asset class, asset location and asset sector. Depending on the circumstances, examples of sustainability risks can include physical environmental risks, climate change transition risks, supply chain disruptions, improper labour practices, lack of board diversity and corruption. If they materialise, sustainability risks can reduce the value of underlying investments held within the Portfolio and could have a material impact on the performance and returns of the Portfolio.

The Investment Adviser does not operate a risk framework that is specifically tailored to sustainability risks at an overall Portfolio level. Rather relevant sustainability risks may be considered as part of the processes adopted by the Investment Adviser to monitor and manage general market risks. Accordingly, the Investment Adviser may integrate sustainability risks in its investment decision making process by taking account of material sustainability events that cause or are reasonably expected to cause broad disruption to economic growth, investor sentiment and asset flows in its ongoing assessment and monitoring of financial markets and the investment risk profile of the Portfolio.

The Investment Adviser may utilise proprietary and/or third-party tools and research to assess and monitor market risks that are relevant to the Portfolio.

Strategies that the Investment Advisers uses within the Portfolio may operate a risk framework tailored towards identifying and managing sustainability risks.

Please refer to the relevant paragraphs of Section 4 “Risk Considerations” in the Prospectus which includes further relevant risk considerations.

## 5. Portfolio Share Class Table

The following table sets out the different Share Classes of the Portfolio and the relevant fees and expenses. For further details on the Share Classes, please refer to Section 3 “Description of Share Classes” of the Prospectus.

| Additional Notes:     | Each type of Share Class listed may also be offered: <ul style="list-style-type: none"> <li>(i) Denominated in or hedged into other currencies. For a list of available currencies and minimum investment amounts, please refer to Section 2 “Goldman Sachs Funds – Minimum Investment Amount Table” of the Supplement.</li> <li>(ii) As Partially Hedged Share Classes. Please refer to Paragraph 3.23 “Currency Hedged Share Classes Share Classes” of the Prospectus.</li> <li>(iii) As accumulation or distribution classes. Please refer to Section 18 “Dividend Policy” of the Prospectus.</li> </ul> |              |                                               |                |                  |                                 |

<sup>1</sup> A Contingent Deferred Sales Charge is imposed on Class C Shares. Please refer to Section 3 “Description of Share Classes” of the Prospectus for further information.

<sup>2</sup> The Portfolio pays transaction costs, including taxes and brokerage commissions, each time it buys and sells securities or instruments and may also pay Borrowing Costs. Shareholders should note that these costs are not reflected in the Portfolio’s operating expenses, but will be reflected in its performance.

**6. Subscriptions, Redemptions and Exchanges**

Subject to the terms outlined in the Prospectus, subscriptions, redemptions and exchanges of Shares of the Portfolio may take place on any Business Day. The cut-off time for subscriptions, redemptions and exchanges of Shares of the Portfolio is 12:00 noon Central European time on the same Business Day.

Investors should be aware that redemption proceeds, less any tax or duty imposed on the redemption of the Shares, will normally be paid within four (4) Business Days following the relevant Redemption Date.

### 3. Goldman Sachs Global Multi-Asset Growth Portfolio

#### 1. Investment Objective

The Goldman Sachs Global Multi-Asset Growth Portfolio (the “Portfolio”) seeks total returns consisting of income and capital appreciation by investing primarily in global equity and fixed income securities, with a focus on equity securities.

#### 2. Investment Policies

The Portfolio will, under normal circumstances, invest at least two thirds of its net assets in equity and/or equity related Transferable Securities and fixed income Transferable Securities of issuers located anywhere in the world. The Portfolio may hold up to 95% of its assets in equity securities, and up to 60% of its assets in fixed income securities. The Portfolio will invest directly in such securities and/or through Permitted Funds.

Equity and equity related Transferable Securities may include common stock, preferred stock, warrants and other rights to acquire stock, ADRs, EDRs and GDRs.

The Investment Adviser implements a multi-faceted approach to Environmental, Social and Governance (ESG) considerations (“ESG Criteria”) into its fundamental investment process. Further details of the ESG characteristics of the Portfolio can be found in the Portfolio’s relevant Appendix in Supplement V of the Prospectus.

The Portfolio may also gain exposure to investments, including but not limited to, derivatives, ETFs and other funds which do not apply the environmental, social and governance criteria outlined in the Portfolio’s relevant Appendix in Supplement V of the Prospectus.

Fixed income Transferable Securities may include (without limitation) fixed and floating rate, senior and subordinated corporate debt obligations (such as bonds, debentures, notes and commercial paper), mortgage and asset-backed securities, collateralised debt and loan obligations, Money Market Instruments, Brady bonds and other debt issued by governments, their agencies and instrumentalities, or by central banks, convertible debt obligations (including CoCos) and reverse repurchase agreements. The Portfolio may not invest in excess of 20% of its net assets in mortgage and asset-backed securities.

The Portfolio’s exposures may include traditional asset class exposures, including but not limited to, global large and small cap equities, emerging markets equity, public real estate and infrastructure investments, infrastructure, commodities, global government and corporate bonds, high yield, emerging market debt as well as non-traditional exposures, including but not limited to, systematic trend following strategies across markets, alternative risk premia strategies (which may include equity volatility selling strategies, FX value and carry oriented strategies, interest rate risk premia and carry related strategies) and macro and/or credit focused absolute return oriented or long-short equity strategies.

The Investment Adviser will seek to implement investment ideas that are generally derived from its short-term or medium-term market views, on a variety of asset classes and instruments (“Tactical Exposures”). The Investment Adviser will generally seek to implement its Tactical Exposures through the use of ETFs, financial derivative instruments, or active investment strategies.

The Portfolio may invest in excess of 10% of its net assets in Permitted Funds. Where the Portfolio invests a substantial proportion of its assets in Permitted Funds, the sum of management fees levied by such Permitted Funds shall not exceed 2.5% of the Portfolio’s assets invested. Investors should also be aware that Permitted Funds may also charge performance fees.

The Portfolio may also use financial derivative instruments as part of its investment policy or for hedging purposes. These may include but are not limited to, foreign currency forward contracts, futures, options (on equity securities and markets, interest rates, credit and currencies), swaps (including equity swaps, interest rate swaps, credit default swaps and total return swaps) and credit linked instruments. For further information on the use of financial derivative instruments and the associated risks, please refer to Appendix C - “Derivatives and Efficient Portfolio Management Techniques” together with Section 4 “Risk Considerations” in the Prospectus.

Investors should be aware that the use of financial derivative instruments in the Portfolio may result in both net long and net short exposures in, amongst other things, interest rates, credit and currencies. For further information on the investment techniques used by the Investment Adviser, please refer to Section 3 “Goldman Sachs Funds - Calculation of Global Exposure and Expected Level of Leverage” of the Supplement.

The Portfolio may also hold bank deposits at sight, such as cash held in current accounts with a bank accessible at any time. Such holdings may only temporarily exceed 20% of the net assets of the Portfolio under exceptionally unfavourable market conditions. Moreover, cash equivalents such as deposits, Money Market Instruments and money market funds may be used for the purpose of cash management and in case of unfavourable conditions, provided that the Investment Adviser considers this to be in the best interests of the Shareholders.

The Investment Adviser intends to engage in SFTR techniques on, amongst other things, equity securities, markets, interest rates, credit, currencies, commodity indices and other Permitted Investments in line with the exposures set out below (in each case as a percentage of net asset value).

| Type of transaction                                    | Under normal circumstances it is generally expected that the principal amount of such transactions would represent a proportion of the Portfolio's net asset value indicated below.* | Under normal circumstances it is generally expected that the principal amount of the Portfolio's assets that can be subject to the transaction may represent up to a maximum of the proportion of the Portfolio's net asset value indicated below. |
|--------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Total return swaps                                     | 2%                                                                                                                                                                                   | 50%                                                                                                                                                                                                                                                |
| Repurchase, including reverse repurchase, transactions | 0%                                                                                                                                                                                   | 50%                                                                                                                                                                                                                                                |
| Securities lending transactions                        | 0%                                                                                                                                                                                   | 15%                                                                                                                                                                                                                                                |

\*In certain circumstances this proportion may be higher.

### 3. Calculation of Global Exposure and Expected Level of Leverage

The table below sets out for this Portfolio the information mentioned in Section 3 “Goldman Sachs Funds – Calculation of Global Exposure and Expected Level of Leverage” of the Supplement.

| Market Risk Calculation | Limit | Reference Portfolio/Benchmark*                                                                                                    | Expected Level of Leverage                 |
|-------------------------|-------|-----------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------|
|                         |       |                                                                                                                                   | Gross Sum of Notionals<br>(Gross Exposure) |
| Relative VaR            | 2 x   | 30% Bloomberg Global Aggregate Index (Total Return Gross) (USD Hedged) / 70% MSCI World Index (Total Return Net) (50% USD Hedged) | 0%-800%**                                  |

\*The Portfolio is actively managed and is not designed to track its Reference Portfolio/Benchmark. Therefore the performance of the Portfolio and the Reference Portfolio/Benchmark may deviate. The Portfolio may offer Share Classes which are denominated in or hedged into currencies other than the Base Currency of the Portfolio. Accordingly, the Reference Portfolio/Benchmark noted above may be denominated in or hedged into the relevant currency of a particular Share Class.

\*\*This expected range of leverage is not a limit and may vary over time as described below. The actual levels may deviate from the stated range.

Given that many of the strategies used by the Portfolio are implemented through the use of financial derivative instruments, including those referred to in Section 3 “Goldman Sachs Funds - Calculation of Global Exposure and Expected Level of Leverage” of the Supplement, the expected level of leverage, as calculated under the gross sum of notionals exposures, may be relatively high. This is particularly emphasised by the use of Eurodollar futures, interest rate futures, swaps, options and futures and forward currency contracts, which result in relatively higher levels of notional exposure from such financial derivative instruments. It also means that the expected level of leverage may exceed the stated range, particularly as a result of effecting certain investment exposures and also as a result of investor redemptions that can result in offsetting financial derivative instruments trades being placed which whilst they reduce investment exposure can increase leverage based on the gross sum of notionals calculation.

Shareholders should note that leverage resulting from the use of financial derivative instruments may result in magnified losses. However, the “Expected Level of Leverage” using the gross sum of notionals in the table above does not necessarily provide an appropriate illustration of the overall risk profile of the Portfolio as financial derivative instruments are used to manage risk as well as to seek return. This is largely due to the fact that the gross sum of notional exposure calculation simply aggregates the absolute sum of all long and short financial derivative instrument positions, even if the financial derivative instruments are for hedging or offsetting purposes. Further the gross sum of notionals calculation uses just notional values rather than measures that calculate the overall contributions to risk which will often explain why the leverage levels under this method appear high. By way of illustration, to achieve a desired level of investment risk in interest rate markets, the amount of gross leverage used to achieve this risk will vary significantly depending on the underlying market risk (or ‘duration’) of the instrument chosen to implement this investment decision. For example, using an instrument with less duration risk - such as a shorter maturity interest rate derivative - requires more leverage to achieve the higher amount of required notional market exposure, compared to using a longer maturity instrument with higher duration risk. In this example, a 2 year maturity interest rate derivative would require approximately 4 times as much notional exposure compared to using a 10 year maturity instrument.

Please refer to Paragraph 1 “Investment Objective” and Paragraph 2 “Investment Policies” of this Appendix for further information on the relevant Portfolio’s strategy and the Synthetic Risk and Reward Indicator (SRRI) in the KIID of the Portfolio for details on such Portfolio’s historic risk profile where applicable. Further details on the average leverage levels, as calculated using the gross sum of notionals exposures, will be disclosed in the Fund’s annual financial statements for the relevant accounting period.

#### **4. Principal Risks of the Portfolio**

Investing in the Portfolio implies (without limitation) the following risk factors which are listed in the same order as in the Prospectus:

- 4.2 Investment risks
- 4.4 Investment in debt securities
- 4.6 Investment in derivatives
- 4.7 Other investments
- 4.9 Leverage and hedging
- 4.10 Currency risks
- 4.11 Currency hedging.

The Portfolio may be exposed to sustainability risks from time to time. A sustainability risk is defined in the EU Sustainable Finance Disclosure Regulation as an environmental, social or governance event or condition that could cause an actual or a potential material negative impact on the value of investments. The universe of sustainability events or conditions is very broad, and their relevance, materiality and impact on investments will depend on a number of factors such as the investment strategy pursued by the Portfolio, asset class, asset location and asset sector. Depending on the circumstances, examples of sustainability risks can include physical environmental risks, climate change transition risks, supply chain disruptions, improper labour practices, lack of board diversity and corruption. If they materialise, sustainability risks can reduce the value of underlying investments held within the Portfolio and could have a material impact on the performance and returns of the Portfolio.

The Investment Adviser does not operate a risk framework that is specifically tailored to sustainability risks at an overall Portfolio level. Rather relevant sustainability risks may be considered as part of the processes adopted by the Investment Adviser to monitor and manage general market risks. Accordingly, the Investment Adviser may integrate sustainability risks in its investment decision making process by taking account of material sustainability events that cause or are reasonably expected to cause broad disruption to economic growth, investor sentiment and asset flows in its ongoing assessment and monitoring of financial markets and the investment risk profile of the Portfolio.

The Investment Adviser may utilise proprietary and/or third-party tools and research to assess and monitor market risks that are relevant to the Portfolio.

Strategies that the Investment Advisers uses within the Portfolio may operate a risk framework tailored towards identifying and managing sustainability risks.

Please refer to the relevant paragraphs of Section 4 “Risk Considerations” in the Prospectus which includes further relevant risk considerations.

## 5. Portfolio Share Class Table

The following table sets out the different Share Classes of the Portfolio and the relevant fees and expenses. For further details on the Share Classes, please refer to Section 3 “Description of Share Classes” of the Prospectus.

| Base Currency:        | USD                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |              |                                               |                |                  |                                 |
|-----------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|-----------------------------------------------|----------------|------------------|---------------------------------|
| Additional Notes:     | <p>Each type of Share Class listed may also be offered:</p> <p>(i) Denominated in or hedged into other currencies. For a list of available currencies and minimum investment amounts, please refer to Section 2 “Goldman Sachs Funds – Minimum Investment Amount Table” of the Supplement.</p> <p>(ii) As Partially Hedged Share Classes. Please refer to Paragraph 3.23 “Currency Hedged Share Classes Share Classes” of the Prospectus.</p> <p>(iii) As accumulation or distribution classes. Please refer to Section 18 “Dividend Policy” of the Prospectus.</p> |              |                                               |                |                  |                                 |
| Share Class           | Share Class Currency                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Sales Charge | Contingent Deferred Sales Charge <sup>1</sup> | Management Fee | Distribution Fee | Operating Expenses <sup>2</sup> |
| Base Shares           | USD                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Up to 5.50 % | Nil                                           | 1.50 %         | Nil              | Variable                        |

| Class IO Shares       | USD                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Nil          | Nil                                           | N/A            | Nil              | Variable                        |
| Class IXO Shares      | USD                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Nil          | Nil                                           | N/A            | Nil              | Variable                        |

<sup>1</sup> A Contingent Deferred Sales Charge is imposed on Class C Shares. Please refer to Section 3 “Description of Share Classes” of the Prospectus for further information.

<sup>2</sup> The Portfolio pays transaction costs, including taxes and brokerage commissions, each time it buys and sells securities or instruments and may also pay Borrowing Costs. Shareholders should note that these costs are not reflected in the Portfolio’s operating expenses, but will be reflected in its performance.

**6. Subscriptions, Redemptions and Exchanges**

Subject to the terms outlined in the Prospectus, subscriptions, redemptions and exchanges of Shares of the Portfolio may take place on any Business Day. The cut-off time for subscriptions, redemptions and exchanges of Shares of the Portfolio is 12:00 noon Central European time on the same Business Day.

Investors should be aware that redemption proceeds, less any tax or duty imposed on the redemption of the Shares, will normally be paid within four (4) Business Days following the relevant Redemption Date.

## 4. Goldman Sachs Global Multi-Asset Income Portfolio

### 1. Investment Objective

The Goldman Sachs Global Multi-Asset Income Portfolio (the “Portfolio”) seeks total returns consisting predominantly of income with the potential for capital appreciation by investing primarily in equity and fixed income securities, with a focus on higher income yielding securities.

### 2. Investment Policies

The Portfolio will, under normal circumstances, invest at least two thirds of its net assets in equity and/or equity related Transferable Securities and fixed income Transferable Securities of issuers located anywhere in the world. The Investment Adviser will generally seek to predominantly hedge the Portfolio’s currency exposure back to the US Dollar.

The Portfolio may hold up to 80% of its assets in equity securities, and up to 80% of its assets in fixed income securities.

The Portfolio may also seek to generate a return through the sale of covered call options on equity securities or indices by obtaining up front premium but the Portfolio’s gains from an increase in the market value of its underlying shares may be limited where sold call options are exercised. For further information on call options and the associated risks, please refer to Paragraph 4.6.6 “Call Options” of the Prospectus. For Distribution Shares, the payment of the proceeds of this strategy is intended to be part of the distribution, if any, of the relevant Share Class at the date on which such distribution is made.

The Portfolio may invest up to 25% of its net assets in convertible debt obligations and up to 20% of its net assets in debt instruments with loss-absorption features (“LAP”) which may be subject to contingent write-down or contingent conversion to ordinary shares on the occurrence of trigger event(s). Convertible debt obligations include CoCos. LAP instruments include, but are not limited to, CoCos, Tier 1 and Tier 2 capital instruments and senior non-preferred debts. The Portfolio may invest up to 5% in CoCos.

For further information on LAP and the associated risks, please refer to Paragraph 4.4.8 “Debt instruments with loss-absorption features” of the Prospectus and for further information on CoCos and the associated risks, please refer to Paragraph 4.4.15 “Contingent Capital Securities (CoCos)” of the Prospectus.

Equity and equity related Transferable Securities may include common stock, preferred stock, warrants and other rights to acquire stock, ADRs, EDRs and GDRs. The Portfolio may also invest in MLP related securities.

Fixed income Transferable Securities may include (without limitation) fixed and floating rate, senior and subordinated corporate debt obligations (such as bonds, debentures, notes and commercial paper), mortgage and asset-backed securities, collateralised debt and loan obligations, Money Market Instruments, Brady bonds and other debt issued by governments, their agencies and instrumentalities, or by central banks, convertible debt obligations, and reverse repurchase agreements. The Portfolio may not invest in excess of 20% of its net assets in mortgage and asset-backed securities.

The Investment Adviser will seek to implement investment ideas that are generally derived from its short-term or medium-term market views, on a variety of asset classes and instruments (“Tactical Exposures”). The Investment Adviser will generally seek to implement its Tactical Exposures through the use of ETFs, financial derivative instruments, or active investment strategies.

The Portfolio may invest up to 10% of its net assets in Permitted Funds.

The Portfolio may also use financial derivative instruments as part of its investment policy or for hedging purposes. These may include but are not limited to, foreign currency forward contracts, futures, options (on equity securities and markets, interest rates, credit and currencies), swaps (including equity swaps, interest rate swaps, credit default swaps and total return swaps) and credit linked instruments. For further information on the use of financial derivative instruments and the associated risks, please refer to Appendix C - “Derivatives and Efficient Portfolio Management Techniques” together with Section 4 “Risk Considerations” in the Prospectus.

The Portfolio may also hold bank deposits at sight, such as cash held in current accounts with a bank accessible at any time. Such holdings may only temporarily exceed 20% of the net assets of the Portfolio under exceptionally unfavourable market conditions. Moreover, cash equivalents such as deposits, Money Market Instruments and money market funds may be used for the purpose of cash management and in case of unfavourable conditions, provided that the Investment Adviser considers this to be in the best interests of the Shareholders.

In relation to Article 7 of SFDR, which requires disclosure of how principal adverse impacts are considered at Portfolio level, the Investment Manager notes that there are still a number of uncertainties regarding this obligation, in particular due to the absence of centralised implementing standards, local guidance or established market practice. The Investment Manager does not currently take principal adverse impacts on sustainability factors into account in respect of the Portfolio, but will keep its approach in this area for the Portfolio under review.

As per Article 7 of the Taxonomy Regulation, Shareholders should note that investments underlying the Portfolios do not take into account the EU criteria for environmentally sustainable economic activities.

The Investment Adviser intends to engage in SFTR techniques on, amongst other things, equity securities, markets, interest rates, credit, currencies, commodity indices and other Permitted Investments in line with the exposures set out below (in each case as a percentage of net asset value).

| Type of transaction                                    | Under normal circumstances it is generally expected that the principal amount of such transactions would represent a proportion of the Portfolio's net asset value indicated below.* | Under normal circumstances it is generally expected that the principal amount of the Portfolio's assets that can be subject to the transaction may represent up to a maximum of the proportion of the Portfolio's net asset value indicated below. |
|--------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Total return swaps                                     | 0%                                                                                                                                                                                   | 50%                                                                                                                                                                                                                                                |
| Repurchase, including reverse repurchase, transactions | 0%                                                                                                                                                                                   | 50%                                                                                                                                                                                                                                                |
| Securities lending transactions                        | 1%                                                                                                                                                                                   | 15%                                                                                                                                                                                                                                                |

\*In certain circumstances this proportion may be higher.

### 3. Calculation of Global Exposure and Expected Level of Leverage

The table below sets out for this Portfolio the information mentioned in Section 3 "Goldman Sachs Funds – Calculation of Global Exposure and Expected Level of Leverage" of the Supplement.

| Market Risk Calculation | Limit | Reference Portfolio/Benchmark*                                                                                                                                                                                                  | Expected Level of Leverage                 |
|-------------------------|-------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------|
|                         |       |                                                                                                                                                                                                                                 | Gross Sum of Notionals<br>(Gross Exposure) |
| Relative VaR            | 2 x   | 40% ICE BofA US High Yield BB-B Constrained Index (USD Hedged) (Total Return Gross) / 40% MSCI World Index (USD Hedged) (Total Return Net) / 20% Bloomberg Global Aggregate – Corporate Index (USD Hedged) (Total Return Gross) | 0%-200%**                                  |

\*The Portfolio is actively managed and is not designed to track its Reference Portfolio/Benchmark. Therefore the performance of the Portfolio and the Reference Portfolio/Benchmark may deviate. The Benchmark should not be relied on for comparison of the Portfolio's performance as the Portfolio is not designed to track the Benchmark. The Portfolio may offer Share Classes which are denominated in or hedged into currencies other than the Base Currency of the Portfolio. Accordingly, the Reference Portfolio/Benchmark noted above may be denominated in or hedged into the relevant currency of a particular Share Class.

\*\*This expected range of leverage is not a limit and may vary over time as described in the Section 3 "Goldman Sachs – Calculation of Global Exposure and Expected Level of Leverage" of the Supplement. The actual levels may deviate from the stated range.

### 4. Principal Risks of the Portfolio

Investing in the Portfolio implies (without limitation) the following risk factors which are listed in the same order as in the Prospectus:

- 4.2 Investment risks
- 4.4 Investment in debt securities
- 4.6 Investment in derivatives and in particular 4.6.6 Call Options
- 4.7 Other investments
- 4.9 Leverage and hedging
- 4.10 Currency risks
- 4.11 Currency hedging

The Portfolio may be exposed to sustainability risks from time to time. A sustainability risk is defined in the EU Sustainable Finance Disclosure Regulation as an environmental, social or governance event or condition that could cause an actual or a potential material negative impact on the value of investments. The universe of sustainability events or conditions is very broad, and their relevance, materiality and impact on investments will depend on a number of factors such as the investment strategy pursued by the Portfolio, asset class, asset location and asset sector. Depending on the circumstances, examples of sustainability risks can include physical environmental risks, climate change transition risks, supply chain disruptions, improper labour practices, lack of board diversity and corruption. If they materialise, sustainability risks can reduce the value of underlying investments held within the Portfolio and could have a material impact on the performance and returns of the Portfolio.

The Investment Adviser does not operate a risk framework that is specifically tailored to sustainability risks at an overall Portfolio level. Rather relevant sustainability risks may be considered as part of the processes adopted by the Investment Adviser to monitor and manage general market risks. Accordingly, the Investment Adviser may integrate sustainability risks in its investment decision making process by taking account of material sustainability events that cause or are reasonably expected to cause broad disruption to economic growth, investor sentiment and asset flows in its ongoing assessment and monitoring of financial markets and the investment risk profile of the Portfolio.

The Investment Adviser may utilise proprietary and/or third-party tools and research to assess and monitor market risks that are relevant to the Portfolio.

Strategies that the Investment Advisers uses within the Portfolio may operate a risk framework tailored towards identifying and managing sustainability risks.

Please refer to the relevant paragraphs of Section 4 “Risk Considerations” in the Prospectus which includes further relevant risk considerations.

## 5. Portfolio Share Class Table

The following table sets out the different Share Classes of the Portfolio and the relevant fees and expenses. For further details on the Share Classes, please refer to Section 3 “Description of Share Classes” of the Prospectus.

|                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

| Base Currency:    | USD                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| Additional Notes: | <p>Each type of Share Class listed may also be offered:</p> <p>(i) Denominated in or hedged into other currencies. For a list of available currencies and minimum investment amounts, please refer to Section 2 “Goldman Sachs Funds – Minimum Investment Amount Table” of the Supplement.</p> <p>With respect to Currency Hedged Share Classes, there may be two distinct types of currency hedged share classes available:</p> <p>(a) Share Classes which seek to hedge the base currency exposure of the Portfolio to the currency denomination of the Share Class. Such Share Classes will, using a EUR denominated class as an example, be denoted: “(EUR-Hedged)”, or</p> <p>(b) Share Classes which seek to only hedge the portfolio return in a given currency (and not the underlying currency exposures) back to the currency denomination of the Share Class. Note that some investors might not regard this as a currency hedged class at all as the currency transactions are not linked to the underlying currency exposures of the portfolio.</p> <p>For example, in the case of a PLN denominated class where the return to be hedged is the return in USD the Investment Adviser will, following a PLN subscription into the class, convert PLN to USD whilst entering into a USD/PLN currency forward transaction with the aim of creating a hedged exposure from USD back to PLN. <b>This means an investor in this Share Class will be exposed to the movement of the underlying</b></p> |

|                       | <p><b>portfolio currencies relative to USD rather than being exposed to the underlying portfolio currencies relative to PLN. Such a Share Class is denoted: “(PLN) (Long Asset Ccy vs. USD)”.</b></p> <p><b>Such a Share Class would only be suitable for an investor who believes that the PLN will appreciate against the USD. If instead the USD appreciates against the PLN the Share Class will return less to the investor than if the investor had just invested in an unhedged class denominated in PLN.</b></p> <p>(ii) As Partially Hedged Share Classes. Please refer to Paragraph 3.23 “Currency Hedged Share Classes of the Prospectus.</p> <p>(iii) As accumulation or distribution classes. Please refer to Section 18 “Dividend Policy” of the Prospectus.</p> |              |                                               |                |                  |                                 |
|-----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|-----------------------------------------------|----------------|------------------|---------------------------------|
| Share Class           | Share Class Currency                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Sales Charge | Contingent Deferred Sales Charge <sup>1</sup> | Management Fee | Distribution Fee | Operating Expenses <sup>2</sup> |

<sup>1</sup> A Contingent Deferred Sales Charge is imposed on Class C Shares. Please refer to Section 3 “Description of Share Classes” of the Prospectus for further information.

<sup>2</sup> The Portfolio pays transaction costs, including taxes and brokerage commissions, each time it buys and sells securities or instruments and may also pay Borrowing Costs. Shareholders should note that these costs are not reflected in the Portfolio’s operating expenses, but will be reflected in its performance.

## 6. Important tax considerations

Investors should note that, where the Portfolio seeks to distribute any proceeds generated from the sale of call options, that this represents a distribution of capital from an accounting perspective. Distributions of capital may impact the tax position of investors who should accordingly take their own specific advice on investment in the Portfolio.

In addition, investors should be aware that, where the Investment Adviser invests in MLP related securities, it does not intend to make investments that will result in the Fund being treated as a partner in a partnership for U.S. tax purposes. For further information on the U.S. tax considerations with respect to MLP related securities, please refer to Section 22 “Taxation” of the Prospectus.

**7. Subscriptions, Redemptions and Exchanges**

Subject to the terms outlined in the Prospectus, subscriptions, redemptions and exchanges of Shares of the Portfolio may take place on any Business Day. The cut-off time for subscriptions, redemptions and exchanges of Shares of the Portfolio is 2:00 p.m. Central European time on the same Business Day.

Supplement II to the Prospectus

- Specialist Portfolios

## This Supplement

The purpose of this Supplement is to describe in more detail those Specialist Portfolios of the Fund.

This Supplement must always be read in conjunction with the Prospectus. The Prospectus contains detailed information on the Fund including: a description of Share Classes; the risks associated with an investment in the Fund; information on the management and administration of the Fund and in respect of those third parties providing services to the Fund; the purchase, redemption and exchange of Shares; the determination of net asset value; dividend policy; fees and expenses of the Fund; general information on the Fund; meetings of and reports to Shareholders; and taxation. In addition, the Prospectus contains, in its Appendices, information on derivatives and efficient portfolio management techniques, applicable investment restrictions and overall risk exposure and risk management.

Potential investors are advised to read the Prospectus and this Supplement, as amended from time to time, together with the latest annual and semi-annual report before making an investment decision. The rights and duties of the investor as well as the legal relationship with the Fund are set out in the Prospectus.

This Supplement provides information on each of the Specialist Portfolios including details of the Share Classes within each Specialist Portfolio that are available as of the date of the Prospectus.

**Before purchasing, redeeming, transferring or exchanging any Shares, the Board of Directors strongly encourages all potential and current Shareholders to seek appropriate professional advice on the legal and taxation requirements of investing in the Fund, together with advice on the suitability and appropriateness of an investment in the Fund or any of its Portfolios. The Fund, its Directors and (unless such duties are separately and expressly assumed by them in writing in respect of investment matters only) the Management Company, the Investment Adviser, Sub-Advisers and other Goldman Sachs entities shall not have any responsibility in respect of these matters. As more particularly described in the Prospectus, certain distributors may be remunerated by Goldman Sachs or the Fund for distributing Shares and any advice received by them should not, in consequence, be assumed to be free of conflict.**

## Definitions

In this Supplement the following capitalised words and phrases will have the meanings set out below. Capitalised words and phrases used but not otherwise defined herein shall have the meaning given to such term in the Prospectus. In the event of a conflict, the meaning in the Supplement shall prevail.

|                                |                                                                                                                                                                                                                                                                                                                                                                                                               |
|--------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>“Emerging Markets”</b>      | means all markets that are included in the International Finance Corporation Composite and/or in the MSCI Emerging Markets Index and/or the MSCI Frontier Markets Index and/or the JPMorgan EMBI Global Diversified Index and/or the JPMorgan GBI-EM Diversified Index, as well as other countries which are at a similar level of economic development or in which new equity markets are being constituted; |
| <b>“EPM”</b>                   | means “efficient portfolio management”;                                                                                                                                                                                                                                                                                                                                                                       |
| <b>“Primarily”</b>             | means, where referring to a Portfolio’s investment objective or investment policy, at least two thirds of the net assets of that Portfolio unless expressly stated to the contrary in respect of a Portfolio;                                                                                                                                                                                                 |
| <b>“PRC Debt Securities”</b>   | means:<br>(1) the following fixed income Transferable Securities:<br>a) Debt securities traded in the CIBM;<br>b) Dim Sum Bonds (bonds issued outside of the PRC but denominated in RMB);<br>c) Urban Investment Bonds;<br>(2) other fixed income Transferable Securities providing exposure to RMB;                                                                                                          |
| <b>“Specialist Portfolios”</b> | means those Specialist Portfolios of the Fund which are set out in this Supplement.                                                                                                                                                                                                                                                                                                                           |

## 1. Goldman Sachs Funds - Summary Table of Portfolios

| Appendix | Specialist Portfolios                                      | Launch Date   |
|----------|------------------------------------------------------------|---------------|
| 1.       | Goldman Sachs Emerging Markets Total Return Bond Portfolio | November 2017 |
| 2.       | Goldman Sachs Global Absolute Return Portfolio             | August 2015   |
| 3.       | Goldman Sachs Global Dynamic Bond Plus Portfolio           | March 2011    |
| 4.       | Goldman Sachs Global Fixed Income Plus Portfolio (Hedged)  | January 2006  |
| 5.       | Goldman Sachs Global Strategic Macro Bond Portfolio        | October 2014  |

For those Portfolios where no exact launch date has been stated, please contact your usual Goldman Sachs representative or the Management Company to establish whether the Portfolio has been launched since the date of this Prospectus. Investors may request information about the Fund as well as the creation of additional Share Classes at the registered office of the Fund.

Hereinafter, the above Portfolios may be referred to without being preceded by the full name of the Portfolio.

## 2. Goldman Sachs Funds - Calculation of Global Exposure and Expected Level of Leverage

Each Portfolio's description includes a table, at Paragraph 4 "Calculation of Global Exposure and Expected Level of Leverage", setting out:

1. Market Risk Calculation: this is the methodology that the Management Company has adopted to calculate the Global Exposure to comply with the UCITS Regulations;
2. Limit: this is the limit on Global Exposure that the Portfolio must comply with. These are:
  - a. Relative VaR: VaR is limited to twice the VaR of a reference portfolio;
  - b. Absolute VaR: VaR is limited to 20% of the net asset value of the Portfolio. The calculation of the VaR is conducted on the basis of a one-sided confidence interval of 99%, and a holding period of 20 days;
  - c. Commitment: Global Exposure related to positions on financial derivative instruments may not exceed the total net value of the portfolio.
3. Reference Portfolio/Benchmark: this is to comply with the UCITS Regulations where Relative VaR approach is used and for information purposes only for the other Portfolios. Shareholders should be aware that such Portfolios might not be managed to the reference portfolio/benchmark and that investment returns may deviate materially from the performance of the specified reference portfolio/benchmark. Shareholders should also be aware that the reference benchmark referred to may change over time; and
4. Expected Level of Leverage: the method used for the determination of the expected level of leverage of the Portfolios, using the Relative VaR or Absolute VaR approach for the purpose of calculating their Global Exposure, is derived from expected gross sum of notionals of the financial derivative instruments used for each Portfolio. Shareholders should be aware that a Portfolio's leverage may, from time to time, exceed the range disclosed. The expected level of leverage takes into account the financial derivative instruments entered into by the Portfolio, the reinvestment of collateral received (in cash) in relation to operations of EPM and any use of collateral in the context of any other operations of EPM, e.g. securities lending.

Shareholders should note that leverage resulting from the use of financial derivative instruments may result in magnified losses. However, the expected level of leverage disclosed at the table at Paragraph 4 "Calculation of Global Exposure and Expected Level of Leverage" in each Appendix does not necessarily provide an appropriate illustration of the overall risk profile of the Portfolio as financial derivative instruments are used to manage risk as well as to seek return. This is largely due to the fact that the gross sum of notionals exposure calculation simply aggregates the absolute sum of all long and short financial derivative instrument positions, even if the financial derivative instruments are for hedging or offsetting purposes. Further the gross sum of notionals exposure calculation uses just notional values rather than measures that calculate the overall contributions to risk which will often explain why the leverage levels under this method appear high. By way of illustration, to achieve a desired level of investment risk in interest rate markets, the amount of gross leverage used to achieve this risk will vary significantly depending on the underlying market risk (or 'duration') of the instrument chosen to implement this investment decision. For example, using an instrument with less duration risk - such as a shorter maturity interest rate derivative - requires more leverage to achieve the higher amount of required notional market exposure, compared to using a longer maturity instrument with higher duration risk. In this example, a 2 year maturity interest rate derivative would require approximately 4 times as much notional exposure compared to using a 10 year maturity instrument. Shareholders should note that the actual leverage levels may vary and deviate from this range significantly and further details on the average leverage levels, as calculated using the gross sum of notionals exposures, will be disclosed in the Fund's annual financial statements for the relevant accounting period.

As further detailed in Paragraph 2 "Investment Policies" of each Appendix for the relevant Portfolios and also in Appendix C – "Derivatives and Efficient Portfolio Management Techniques" of the Prospectus, Portfolios may use financial derivative instruments for hedging purposes, in order to manage risk relating to a Portfolio's investments and/or to establish speculative positions. The Investment Adviser may use a wide range of strategies with financial derivative instruments which, depending on the Portfolio, may be similar but not necessarily identical and may be used in varying amounts to generate returns and/or manage risk. Such strategies may mainly include, but are not limited to:

1. interest rate swaps and futures are often used to manage or hedge interest rate risk and yield curve exposure, implement relative value positions, or establish speculative views;
2. forward currency contracts are often used to hedge currency exposures or establish active foreign exchange views;
3. total return swaps are often used to hedge certain exposure, to gain synthetic exposure to certain markets or to implement long and short views on certain issuers or sectors in various asset classes;
4. credit default swaps are often used to hedge certain sector or individual issuers exposures and risks or establish speculative views.

When used to calculate leverage implied by the use of such financial derivative instruments, the gross sum of notionals exposure can result in high levels even where the net exposure in the relevant Portfolio could actually be reduced, as demonstrated below.

1. **Interest rate swaps and futures:** the gross sum of notionals exposure calculation can result in high levels for interest rate strategies despite the overall net duration impact not necessarily being that high depending on the nature of the strategy the Investment Adviser is pursuing. For instance, if one was to employ 90-day Eurodollar interest rate futures to reduce the interest rate risk of a portfolio of bonds, for instance by reducing the duration profile of a Portfolio by one year, in notional exposure terms that could equate to approximately 400% leverage despite the overall risk profile of the Portfolio having been reduced as it relates to interest rate risk.
2. **Forward currency contracts:** in cases where forward currency contracts are used to establish speculative views on currencies or for hedging purposes and the Investment Adviser wishes to remove such exposures due to a change in view or Shareholder redemptions, the inability or inefficiencies that may arise in cancelling such transactions may require such exposures to be offset by equal and opposite transactions, which can lead to high levels of leverage when using the gross method of calculation despite the net exposure being reduced.
3. **Total return swaps:** total return swaps involve the exchange of payments based on set rate, either fixed or floating, with the right to receive the total return, coupons plus capital gains or losses, of a specified reference asset, index or basket of assets. The value of a total return swap may change as a result of fluctuations in the underlying investment exposure. The gross sum of notionals exposure calculation can suggest levels of leverage even where the market exposure has sought to be achieved more efficiently than a physical position. For instance, if one was to employ a total return swap to gain exposure to an Emerging Market rather than buy securities issued in such market, when using the gross sum of notionals exposure to calculate leverage it would indicate a level of leverage whilst the alternative of buying the physical securities for the equivalent exposure would not.
4. **Credit default swaps:** the gross sum of notionals exposure calculation can suggest levels of leverage even in cases where credit risk has sought to be reduced. For instance, if one was to employ an index credit default swap in order to reduce the credit risk of a portfolio of bonds, when using the gross sum of notionals exposure to calculate leverage it would indicate a level of leverage despite the overall risk profile of the Portfolio having been reduced as it relates to credit risk.

Please refer to Appendix C – “Derivatives and Efficient Portfolio Management Techniques” together with Section 4 “Risk Considerations” (in particular Paragraph 4.6 “Investment in derivatives”) in the Prospectus for further information on the use of financial derivative instruments, their purposes and some of the risk considerations associated with them.

Please refer to Paragraph 1 “Investment Objective” and Paragraph 2 “Investment Policies” of each Portfolio for further information on the relevant Portfolio’s strategy and the Synthetic Risk and Reward Indicator (SRRI) in the KIID of the relevant Portfolio for details on the Portfolio’s historic risk profile where applicable.

## Appendix

### 1. Goldman Sachs Emerging Markets Total Return Bond Portfolio

#### 1. Investment Objective

The Portfolio seeks to achieve total returns through both capital appreciation and income generation from a portfolio of investments primarily in Emerging Markets fixed income securities and currency. The Portfolio will mainly invest in currencies and publicly traded securities of Emerging Markets as well as financial derivative instruments.

#### 2. Investment Policies

The Portfolio will mainly invest in fixed income and currency markets, across Investment Grade and below Investment Grade sectors (including up to 10% in distressed securities) of Emerging Markets government and corporate issuers as well as financial derivative instruments.

The Investment Adviser implements a multi-faceted approach to Environmental, Social and Governance (ESG) considerations ("ESG Criteria") into its fundamental investment process. Further details of the ESG characteristics of the Portfolio can be found in the Portfolio's relevant Appendix in Supplement V of the Prospectus.

Fixed income securities may include, but are not limited to, government bonds, government agency bonds, supranational bonds, asset-backed securities, mortgage-backed securities, collateralised loan obligations, collateralised debt obligations, corporate bonds (including corporate high yield bonds and CoCos (see below)), and Emerging Markets debt.

The Portfolio may invest in PRC Debt Securities, including via Bond Connect and/or the CIBM Direct Access as applicable. Please refer to Paragraph 4.2.11 "Investments in China" of the Prospectus.

The Portfolio will not invest more than one quarter of its net assets in convertible debt obligations, including up to 10% in CoCos. For further information on CoCos and the associated risks, please refer to Section 4 "Risk Considerations" of the Prospectus.

The Portfolio may invest up to one tenth of its net assets in equity and/or equity related Transferable Securities. Please note that this limit does not apply to investment in preferred stock.

The Portfolio will not invest more than 10% of its net assets in Permitted Funds.

The Portfolio may invest in excess of 20% of its net assets in mortgage and asset-backed securities either directly or indirectly via a financial index, including but not limited to CMBX. The issuers of such mortgage and asset-backed securities may include but are not limited to government agencies and/or government sponsored enterprises and special purpose vehicles sponsored by banks. For further information on the use of mortgage and asset-backed securities and associated risks, please refer to Section 2.2 "Fixed Income Portfolios" together with Section 4 "Risk Considerations" in the Prospectus.

The Portfolio may also hold bank deposits at sight, such as cash held in current accounts with a bank accessible at any time. Such holdings may only temporarily exceed 20% of the net assets of the Portfolio under exceptionally unfavourable market conditions. Moreover, cash equivalents such as deposits, Money Market Instruments and other short-term debt obligations, money market funds and repurchase agreements with banks and broker-dealers may be used for the purpose of cash management and in case of unfavourable conditions, provided that the Investment Adviser considers this to be in the best interests of the Shareholders.

The Investment Adviser intends to engage in SFTR techniques on, amongst other things, equity securities, markets, interest rates, credit, currencies, commodity indices and other Permitted Investments in line with the exposures set out below (in each case as a percentage of net asset value).

| Type of transaction                                    | Under normal circumstances it is generally expected that the principal amount of such transactions would represent a proportion of the Portfolio's net asset value indicated below.* | Under normal circumstances, it is generally expected that the principal amount of the Portfolio's assets that can be subject to the transaction may represent up to a maximum of the proportion of the Portfolio's net asset value indicated below. |
|--------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Total return swaps                                     | 3%                                                                                                                                                                                   | 50%                                                                                                                                                                                                                                                 |
| Repurchase, including reverse repurchase, transactions | 0%                                                                                                                                                                                   | 50%                                                                                                                                                                                                                                                 |
| Securities lending transactions                        | 0%                                                                                                                                                                                   | 15%                                                                                                                                                                                                                                                 |

\*In certain circumstances this proportion may be higher.

### 3. Investment Techniques

The Investment Adviser in particular may use certain techniques, through the use of financial derivative instruments, as described in Section 2 “Goldman Sachs Funds - Calculation of Global Exposure and Expected Level of Leverage” of the Supplement, which may result in both net long and net short exposures in, amongst other things, fixed income securities, markets, interest rates, credit, currencies, commodity indices and other Permitted Investments as part of the Portfolio's general investment policy, to generate returns and/or for hedging purposes. Furthermore, the Portfolio may engage in financial derivative transactions including, but not limited to, swaps (including interest rate swaps, credit default swaps and total return swaps), futures contracts, options, foreign currency forward contracts, reverse repurchase agreements, and other transactions involving currency and interest rate hedging, security hedging or other strategies to manage risk relating to the Portfolio's investments, to leverage the Portfolio and to establish speculative positions.

The financial derivative instruments will enable the Investment Adviser to, amongst other things:

- (i) hedge an exposure;
- (ii) use as a substitute for taking a position in the underlying asset;
- (iii) establish or adjust interest rate exposure; and/or
- (iv) establish or adjust an exposure to a particular issuer, sector, currency, country or index.

Please also refer to Appendix C – “Derivatives and Efficient Portfolio Management Techniques” together with Section 4 “Risk Considerations” in the Prospectus (and in particular Paragraph 4.6 “Investments in derivatives”) and Section 2 “Goldman Sachs Funds - Calculation of Global Exposure and Expected Level of Leverage” of the Supplement for further information on the use of financial derivative instruments, their purposes and some of the risk considerations associated with them.

### 4. Calculation of Global Exposure and Expected Level of Leverage

The table below sets out for this Portfolio the information mentioned in Section 2 “Goldman Sachs Funds – Calculation of Global Exposure and Expected Level of Leverage” of the Supplement.

| Market Risk Calculation | Limit | Reference Portfolio/Benchmark* | Expected Level of Leverage                     |
|-------------------------|-------|--------------------------------|------------------------------------------------|
|                         |       |                                | Gross Sum of Notionals<br><br>(Gross Exposure) |
| Absolute VaR            | 20%   | ICE BofA 3 month US T-Bill*    | 0%-1500%**                                     |

\*The Portfolio may offer Share Classes which are denominated in or hedged into currencies other than the Base Currency of the Portfolio. Accordingly, the Reference Portfolio/Benchmark noted above may be denominated in or hedged into the relevant currency of a particular Share Class.

**For performance reporting purposes, the Portfolio will use the ICE BofA 3 month US T-Bill as a reference benchmark. The Portfolio is actively managed and is not designed to track its reference benchmark. Therefore the performance of the Portfolio and the reference benchmark may deviate.**

**\*\*This expected range of leverage is not a limit and may vary over time particularly as a result of effecting certain investment exposures and also as a result of investor redemptions that can result in offsetting financial derivative instruments trades being placed which whilst they reduce investment exposure can increase leverage based on the gross sum of notionals calculation.**

Given that many of the strategies used by the Portfolio are implemented through the use of financial derivative instruments, including those referred to in Section 2 “Goldman Sachs Funds - Calculation of Global Exposure and Expected Level of Leverage” of the Supplement, the expected level of leverage, as calculated under the gross sum of notionals exposures, may be relatively high. This is particularly emphasised in the Emerging Markets, currency and duration strategies which often involve the use of swaps, such as interest rate swaps, total return swaps or equity swaps, futures contracts and forward currency contracts which may result in relatively higher levels of notional exposure. For further information on the use of financial derivative instruments and associated risks, please refer to Section 4 “Risk Considerations” and Appendix C “Derivatives and Efficient Portfolio Management Techniques” in the Prospectus. It also means that the expected level of leverage may exceed the stated range, particularly as a result of effecting certain investment exposures and also as a result of investor redemptions that can result in offsetting financial derivative instruments trades being placed which whilst they reduce investment exposure can increase leverage based on the gross sum of notionals calculation.

Shareholders should note that leverage resulting from the use of financial derivative instruments may result in magnified losses. However, the “Expected Level of Leverage” using the gross sum of notionals in the table above does not necessarily provide an appropriate illustration of the overall risk profile of the Portfolio as financial derivative instruments are used to manage risk as well as to seek return. This is largely due to the fact that the gross sum of notional exposure calculation simply aggregates the absolute sum of all long and short financial derivative instrument positions, even if the financial derivative instruments are for hedging or offsetting purposes. Further the gross sum of notionals calculation uses just notional values rather than measures that calculate the overall contributions to risk which will often explain why the leverage levels under this method appear high. By way of illustration, to achieve a desired level of investment risk in interest rate markets, the amount of gross leverage used to achieve this risk will vary significantly depending on the underlying market risk (or ‘duration’) of the instrument chosen to implement this investment decision. For example, using an instrument with less duration risk - such as a shorter maturity interest rate derivative - requires more leverage to achieve the higher amount of required notional market exposure, compared to using a longer maturity instrument with higher duration risk. In this example, a 2 year maturity interest rate derivative would require approximately 4 times as much notional exposure compared to using a 10 year maturity instrument.

Please refer to Paragraph 1 “Investment Objective” and Paragraph 2 “Investment Policies” of this Appendix for further information on the relevant Portfolio’s strategy and the Synthetic Risk and Reward Indicator (SRRI) in the KIID of the Portfolio for details on such Portfolio’s historic risk profile where applicable. Further details on the average leverage levels, as calculated using the gross sum of notionals exposures, will be disclosed in the Fund’s annual financial statements for the relevant accounting period.

## **5. Performance Fees**

The Investment Adviser is entitled to receive a performance fee for certain Share Classes of the Portfolio (the “Performance Fee”) equal to 15 percent of the amount by which the net asset value per Share (please see Section 17 “Determination of Net Asset Value” in the Prospectus) exceeds the Adjusted High Water Mark (as more fully described under Section 19 “Fees and Expenses” of the Prospectus). The Performance Fee is calculated and accrues daily and is payable either annually in arrears or when a redemption takes place out of the assets attributable to the Share Class. A separate Performance Fee calculation shall be carried out in respect of each relevant Share Class of the Portfolio.

## **6. Principal Risks of the Portfolio**

Investing in the Portfolio implies (without limitation) the following risk factors which are listed in the same order as in the Prospectus:

- 4.2 Investment risks and in particular 4.2.9 Emerging Markets and 4.2.11 Investments in China

- 4.4 Investment in debt securities
- 4.6 Investment in derivatives
- 4.7 Other investments
- 4.9 Leverage and hedging
- 4.10 Currency risks
- 4.11 Currency hedging

The Portfolio may be exposed to sustainability risks from time to time. A sustainability risk is defined in the EU Sustainable Finance Disclosure Regulation as an environmental, social or governance event or condition that could cause an actual or a potential material negative impact on the value of investments. The universe of sustainability events or conditions is very broad, and their relevance, materiality and impact on investments will depend on a number of factors such as the investment strategy pursued by the Portfolio, asset class, asset location and asset sector. Depending on the circumstances, examples of sustainability risks can include physical environmental risks, climate change transition risks, supply chain disruptions, improper labour practices, lack of board diversity and corruption. If they materialise, sustainability risks can reduce the value of underlying investments held within the Portfolio and could have a material impact on the performance and returns of the Portfolio.

The Investment Adviser does not operate a risk framework that is specifically tailored to sustainability risks. Rather relevant sustainability risks may be considered as part of the processes adopted by the Investment Adviser to monitor and manage general market risks. Accordingly, the Investment Adviser may integrate sustainability risks in its investment decision making process by having regard to material sustainability events that cause or are reasonably expected to cause broad disruption to economic growth, investor sentiment and asset flows in its ongoing assessment and monitoring of financial markets and the investment risk profile of the Portfolio.

The Investment Adviser may utilise proprietary and/or third-party tools and research to assess and monitor market risks that are relevant to the Portfolio.

Please refer to the relevant paragraphs of Section 4 “Risk Considerations” in the Prospectus which includes further relevant risk considerations.

## 7. Portfolio Share Class Table

The following table sets out the different Share Classes of the Portfolio and relevant fees and expenses. For further details on the Share Classes, please refer to Section 3 “Description of Share Classes” of the Prospectus.

| Base Currency:    | USD                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |              |                                               |                |                  |                                      |                                 |                    |
|-------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|-----------------------------------------------|----------------|------------------|--------------------------------------|---------------------------------|--------------------|
| Additional Notes: | <p>Each type of Share Class listed may also be offered:</p> <p>(i) Denominated in or hedged into the following currencies: USD, EUR, GBP, ISK, JPY, CHF, HKD, SGD, CAD, SEK, NOK, DKK, AUD, NZD, INR, BRL, PLN and RMB. The Sales Charge, Management Fee, distribution fee, Performance Fee and operating expenses (in each case, where applicable) for these additional Share Classes are the same as for the relevant Share Class type in the below table. The amount of the investment minimum for these Share Classes in each of the following currencies is the same amount in the relevant currency as the amount quoted for that Share Class type's USD or EUR class in the below table: USD, EUR, GBP, CHF, HKD, SGD, CAD, AUD, NZD (e.g., the minimum for the Class I Shares (GBP) class is GBP 1m). In the case of JPY, INR, BRL and RMB, the investment minimum will be equal to the amount quoted for that Share Class type's USD or EUR class multiplied by 100, 40, 2 and 6 respectively. In the case of DKK, NOK and SEK, the investment minimum will be equal to the amount quoted for that Share Class type's USD or EUR class multiplied by 6, 7 and 8 respectively. In the case of ISK, the investment minimum will be equal to the amount quoted for that Share Class type's USD or EUR class multiplied by 150.</p> <p>(ii) As accumulation or distribution classes. Please refer to Section 18 “Dividend Policy” of the Prospectus.</p> |              |                                               |                |                  |                                      |                                 |                    |
| Share Class       | Share Class Currency                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Sales Charge | Contingent Deferred Sales Charge <sup>1</sup> | Management Fee | Distribution Fee | Performance Fee <sup>2</sup>         | Operating Expenses <sup>3</sup> | Minimum Investment |

<sup>1</sup> A Contingent Deferred Sales Charge is imposed on Class C and Class C (Flat) Shares. Please refer to Section 3 “Description of Share Classes” of the Prospectus for further information.

<sup>2</sup> Investors should be aware that for Share Classes which charge performance fees, the total fees paid by a Shareholder in the performance fee Share Class may be higher than the total fees paid by a Shareholder invested in the equivalent Share Class type without performance fees in the event a Portfolio performs above a certain threshold but may be lower if the Portfolio performs below a certain threshold. It should be noted that where swing pricing has been applied to the Net Asset Value of a share class, performance fees are accrued based on the Net Asset Value of the share class before the application of swing pricing. Please refer to Section 17 “Determination of Net Asset Value” of the Prospectus for further information on swing pricing.

<sup>3</sup> The Portfolio pays transaction costs, including taxes and brokerage commissions, each time it buys and sells securities or instruments and may also pay Borrowing Costs. Shareholders should note that these costs are not reflected in the Portfolio’s operating expenses, but will be reflected in the Portfolio’s performance.

## 8. Subscriptions, Redemptions and Exchanges

Subject to the terms outlined in the Prospectus, subscriptions, redemptions and exchanges of Shares of the Portfolio may take place on any Business Day. The cut-off time for subscriptions, redemptions and exchanges of Shares of the Portfolio is 2:00 p.m. Central European time on the same Business Day.

## 2. Goldman Sachs Global Absolute Return Portfolio

### Additional Definition for Supplement:

**“Factor(s)”** means core risk factor exposure(s), which may include exposures to equities, fixed income, currencies and commodity indices in order to achieve the investment objective of the Portfolio.

#### 1. Investment Objective

The Portfolio will seek to achieve absolute returns over a rolling three-year period from a portfolio of investments in equity, equity-related securities, fixed income securities, fixed income-related securities, and financial derivative or other instruments on interest rates, credit, currencies and commodity indices, and other Permitted Investments. Absolute returns are not guaranteed.

#### 2. Investment Policies

The Investment Adviser will seek to employ a number of diverse investment strategies in order to achieve the investment objective and policy of the Portfolio. The Investment Adviser will seek to implement investment ideas that are generally derived from its short-term or medium-term market views, on a variety of asset classes and instruments (“Tactical Exposures”). The Investment Adviser will also seek to allocate capital to underlying assets comprised in certain Factors, markets, sectors or assets (“Risk Premia Exposures”).

Equity securities may include, but are not limited to, equity and/or equity related Transferable Securities, which includes common stock, preferred stock, warrants and other rights to acquire stock, ADRs, EDRs and GDRs.

Fixed income securities and fixed income-related securities may include, but are not limited to, government bonds, government agency bonds, supranational bonds, asset-backed securities, mortgage-backed securities, collateralised loan obligations, collateralised debt obligations, corporate bonds (including corporate high yield bonds), and Emerging Markets debt.

The Portfolio may invest in PRC Debt Securities, including via Bond Connect and/or the CIBM Direct Access as applicable. Please refer to Paragraph 4.2.11 “Investments in China” of the Prospectus.

The Portfolio may also hold bank deposits at sight, such as cash held in current accounts with a bank accessible at any time. Such holdings may only temporarily exceed 20% of the net assets of the Portfolio under exceptionally unfavourable market conditions. Moreover, cash equivalents such as deposits, Money Market Instruments and other short-term debt obligations, money market funds and repurchase agreements with banks and broker-dealers may be used for the purpose of cash management and in case of unfavourable conditions, provided that the Investment Adviser considers this to be in the best interests of the Shareholders.

The Portfolio may invest up to 10% of its net assets in Permitted Funds.

### Overview of Investment Process in respect of the Tactical Exposures

The Investment Adviser will generally seek to implement its Tactical Exposures utilising passive investment management strategies. Passive investment management strategies generally will be implemented through the use of ETFs, financial derivative instruments, or other products with strategies designed to seek passive exposure to a particular asset class or sector in line with a stated benchmark. Any such passive implementation would only use products or instruments sponsored or managed by, or the counterparty for which is, a person not affiliated with Goldman Sachs (“Third Party Products and Instruments”). If the Investment Adviser determines that the implementation of a Tactical Exposure cannot be obtained by passive implementation using a Third Party Product and Instrument, or the Investment Adviser deems that investing in a Third Party Product and Instrument may subject the Portfolio and its investors to suboptimal transaction costs, liquidity provisions or significant return and volatility deviations from an index that the product is managed against, the Investment Adviser will seek to implement the Tactical Exposure by investing in a product that employs active investment strategies. When selecting actively-managed investment products for the Portfolio, the Investment Adviser will select investment products sponsored or

managed by the Management Company, the Investment Adviser or their affiliates (“Goldman Sachs Products”) unless a Goldman Sachs Product is not available in the relevant asset class/sub-asset class.

### Overview of Investment Process in respect of the Risk Premia Exposures

The Investment Adviser will generally seek to implement the Risk Premia Exposures by seeking to replicate the returns of an asset class or a basket of asset classes relevant to the Portfolio and for that purpose, the Investment Adviser generally expects to use statistical analysis of historical performance data in respect of such asset class, along with public market information obtained from databases, regulatory filings and other sources, to identify relevant Factors for such asset classes. The investment strategy of the Portfolio reflects the theory that returns of certain asset classes are driven to a large extent by exposure to common factors.

Changes in market conditions can be sudden and could materially adversely affect the performance of the Portfolio. The percentage of the Portfolio's assets allocated to a Factor, market, sector or asset will be determined by the Investment Adviser, based on various considerations, which may include the amount of the Portfolio's assets under management. Greater concentration in any Factor, market, sector or asset may entail additional risks. Please see Sections 5 “Principal Risks of the Portfolio” and 7 “Special Considerations of the Portfolio” below.

The success of the Portfolio's investment strategy is dependent on certain underlying assumptions, including that the Investment Adviser correctly identifies the relevant Factors and correctly determines the size and timing of the Portfolio's investment in each Factor.

**The Portfolio's investment programme is speculative and entails substantial risks. There can be no assurance that the investment objective of the Portfolio will be achieved or that the investment strategy will be successful, and results may vary substantially over time. The Portfolio's investment programme may be highly concentrated from time to time in that the Portfolio may invest substantially all of its assets in a limited number of Factors, markets, sectors or assets. There is no assurance that the various steps employed in the investment process of the Portfolio will be successful, that the models and techniques utilised therein will be implemented successfully or that they are adequate for their intended uses, or that the discretionary element of the investment process of the Portfolio will be exercised in a manner that is successful or that is not adverse to the Portfolio.**

In relation to Article 7 of SFDR, which requires disclosure of how principal adverse impacts are considered at Portfolio level, the Investment Manager notes that there are still a number of uncertainties regarding this obligation, in particular due to the absence of centralised implementing standards, local guidance or established market practice. The Investment Manager does not currently take principal adverse impacts on sustainability factors into account in respect of the Portfolio, but will keep its approach in this area for the Portfolio under review.

As per Article 7 of the Taxonomy Regulation, Shareholders should note that investments underlying the Portfolios do not take into account the EU criteria for environmentally sustainable economic activities.

The Investment Adviser intends to engage in SFTR techniques on, amongst other things, equity securities, markets, interest rates, credit, currencies, commodity indices and other Permitted Investments in line with the exposures set out below (in each case as a percentage of net asset value).

| Type of transaction                                    | Under normal circumstances it is generally expected that the principal amount of such transactions would represent a proportion of the Portfolio's net asset value indicated below.* | Under normal circumstances it is generally expected that the principal amount of the Portfolio's assets that can be subject to the transaction may represent up to a maximum of the proportion of the Portfolio's net asset value indicated below. |
|--------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Total return swaps                                     | 50%                                                                                                                                                                                  | 100%                                                                                                                                                                                                                                               |
| Repurchase, including reverse repurchase, transactions | 0%                                                                                                                                                                                   | 50%                                                                                                                                                                                                                                                |
| Securities lending transactions                        | 0%                                                                                                                                                                                   | 15%                                                                                                                                                                                                                                                |

\*In certain circumstances this proportion may be higher.

### 3. Investment Techniques

The Investment Adviser in particular may use certain techniques, through the use of financial derivative instruments, as described in Section 2 “Goldman Sachs Funds - Calculation of Global Exposure and Expected Level of Leverage” of the Supplement, which may result in both net long and net short exposures in, amongst other things, equity securities, markets, interest rates, credit, currencies, commodity indices and other Permitted Investments as part of the Portfolio’s general investment policy, to generate returns and/or for hedging purposes. Furthermore, the Portfolio may engage in financial derivative transactions including, but not limited to, swaps (including interest rate swaps, credit default swaps and total return swaps), futures contracts, options, foreign currency forward contracts, reverse repurchase agreements, and other transactions involving currency and interest rate hedging, security hedging or other strategies to manage risk relating to the Portfolio’s investments, to leverage the Portfolio and to establish speculative positions.

The financial derivative instruments will enable the Investment Adviser to, amongst other things:

- (i) hedge an exposure;
- (ii) use as a substitute for taking a position in the underlying asset;
- (iii) establish or adjust interest rate exposure; and/or
- (iv) establish or adjust an exposure to a particular issuer, sector, currency, country or index.

Please also refer to Appendix C – “Derivatives and Efficient Portfolio Management Techniques” together with Section 4 “Risk Considerations” in the Prospectus (and in particular Paragraph 4.6 “Investments in derivatives”) and Section 2 “Goldman Sachs Funds - Calculation of Global Exposure and Expected Level of Leverage” of the Supplement for further information on the use of financial derivative instruments, their purposes and some of the risk considerations associated with them.

### 4. Calculation of Global Exposure and Expected Level of Leverage

The table below sets out for this Portfolio the information mentioned in Section 2 “Goldman Sachs Funds - Calculation of Global Exposure and Expected Level of Leverage” of the Supplement.

| Market Risk Calculation | Limit | Reference Portfolio/Benchmark* | Expected Level of Leverage                 |
|-------------------------|-------|--------------------------------|--------------------------------------------|
|                         |       |                                | Gross Sum of Notionals<br>(Gross Exposure) |
| Absolute VaR            | 20%   | ICE BofA 3 month US T-Bill*    | 500%-1500%**                               |

\*For performance reporting purposes, the Portfolio will use the ICE BofA 3 month US T-Bill as a reference benchmark. The Portfolio is actively managed and is not designed to track its Reference Portfolio/Benchmark. Therefore the performance of the Portfolio and the Reference Portfolio/Benchmark may deviate.

The Portfolio may offer Share Classes which are denominated in or hedged into currencies other than the Base Currency of the Portfolio. Accordingly, the Reference Portfolio/Benchmark noted above may be denominated in or hedged into the relevant currency of a particular Share Class.

\*\*This expected range of leverage is not a limit and may vary over time as described below. The actual levels may deviate from the stated range.

Given that many of the strategies used by the Portfolio are implemented through the use of financial derivative instruments, including those referred to in Section 2 “Goldman Sachs Funds - Calculation of Global Exposure and Expected Level of Leverage” of the Supplement, the expected level of leverage, as calculated under the gross sum of notionals exposures, may be relatively high. This is particularly emphasised in the Tactical Exposures and Risk Premia Exposures strategies which often involve the use of swaps, futures contracts and forward currency contracts which result in relatively higher levels of notional exposure from such financial derivative instruments. It also means that the expected level of leverage may exceed the stated range, particularly as a result of effecting certain investment exposures and also as a result of investor redemptions that can result in offsetting financial derivative

instruments trades being placed which whilst they reduce investment exposure can increase leverage based on the gross sum of notionals calculation.

Shareholders should note that leverage resulting from the use of financial derivative instruments may result in magnified losses. However, the “Expected Level of Leverage” using the gross sum of notionals in the table above does not necessarily provide an appropriate illustration of the overall risk profile of the Portfolio as financial derivative instruments are used to manage risk as well as to seek return. This is largely due to the fact that the gross sum of notional exposure calculation simply aggregates the absolute sum of all long and short financial derivative instrument positions, even if the financial derivative instruments are for hedging or offsetting purposes. Further the gross sum of notionals calculation uses just notional values rather than measures that calculate the overall contributions to risk which will often explain why the leverage levels under this method appear high. By way of illustration, to achieve a desired level of investment risk in interest rate markets, the amount of gross leverage used to achieve this risk will vary significantly depending on the underlying market risk (or ‘duration’) of the instrument chosen to implement this investment decision. For example, using an instrument with less duration risk - such as a shorter maturity interest rate derivative - requires more leverage to achieve the higher amount of required notional market exposure, compared to using a longer maturity instrument with higher duration risk. In this example, a 2 year maturity interest rate derivative would require approximately 4 times as much notional exposure compared to using a 10 year maturity instrument.

Please refer to Paragraph 1 “Investment Objective” and Paragraph 2 “Investment Policies” of this Appendix for further information on the relevant Portfolio’s strategy and the Synthetic Risk and Reward Indicator (SRRI) in the KIID of the Portfolio for details on such Portfolio’s historic risk profile where applicable. Further details on the average leverage levels, as calculated using the gross sum of notionals exposures, will be disclosed in the Fund’s annual financial statements for the relevant accounting period.

## 5. Principal Risks of the Portfolio

Investing in the Portfolio implies (without limitation) the following risk factors which are listed in the same order than in the Prospectus:

- 4.2 Investment risks and in particular 4.2.9 Emerging Markets and 4.2.11 Investments in China
- 4.4 Investment in debt securities
- 4.5. Investment in equity securities
- 4.6 Investment in derivatives
- 4.7 Other investments
- 4.9 Leverage and hedging
- 4.10 Currency risks
- 4.11 Currency hedging

The Portfolio may be exposed to sustainability risks from time to time. A sustainability risk is defined in the EU Sustainable Finance Disclosure Regulation as an environmental, social or governance event or condition that could cause an actual or a potential material negative impact on the value of investments. The universe of sustainability events or conditions is very broad, and their relevance, materiality and impact on investments will depend on a number of factors such as the investment strategy pursued by the Portfolio, asset class, asset location and asset sector. Depending on the circumstances, examples of sustainability risks can include physical environmental risks, climate change transition risks, supply chain disruptions, improper labour practices, lack of board diversity and corruption. If they materialise, sustainability risks can reduce the value of underlying investments held within the Portfolio and could have a material impact on the performance and returns of the Portfolio.

The Investment Adviser does not operate a risk framework that is specifically tailored to sustainability risks at an overall Portfolio level. Rather relevant sustainability risks may be considered as part of the processes adopted by the Investment Adviser to monitor and manage general market risks. Accordingly, the Investment Adviser may integrate sustainability risks in its investment decision making process by taking account of material sustainability events that cause or are reasonably expected to cause broad disruption to economic growth, investor sentiment and asset flows in its ongoing assessment and monitoring of financial markets and the investment risk profile of the Portfolio.

The Investment Adviser may utilise proprietary and/or third-party tools and research to assess and monitor market risks that are relevant to the Portfolio.

Strategies that the Investment Advisers uses within the Portfolio may operate a risk framework tailored towards identifying and managing sustainability risks.

Please refer to the relevant paragraphs of Section 4 “Risk Considerations” in the Prospectus which includes further relevant risk considerations.

## 6. Portfolio Share Class Table

The following table sets out the Share Classes of this Portfolio. For further details on the Share Classes, please refer to Section 3 “Description of Share Classes” of the Prospectus.

| Base Currency         | USD                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |              |                                               |                |                  |                                 |                    |

| Additional Notes      | Each type of Share Class may also be offered:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |              |                                               |                |                  |                                 |                    |
|                       | <p>(i) Denominated in or hedged into the following currencies: USD, EUR, GBP, ISK, JPY, CHF, HKD, SGD, CAD, SEK, NOK, DKK, AUD, NZD, INR, BRL, PLN and RMB. The Sales Charge, Management Fee, distribution fee, Performance Fee and operating expenses (in each case, where applicable) for these additional Share Classes are the same as for the relevant Share Class type in the below table. The amount of the investment minimum for these Share Classes in each of the following currencies is the same amount in the relevant currency as the amount quoted for that Share Class type's USD or EUR class in the below table: USD, EUR, GBP, CHF, HKD, SGD, CAD, AUD, NZD (e.g., the minimum for the Class I Shares (GBP) class is GBP 1m). In the case of JPY, INR, BRL and RMB, the investment minimum will be equal to the amount quoted for that Share Class type's USD or EUR class multiplied by 100, 40, 2 and 6 respectively. In the case of DKK, NOK and SEK, the investment minimum will be equal to the amount quoted for that Share Class type's USD or EUR class multiplied by 6, 7 and 8 respectively. In the case of ISK, the investment minimum will be equal to the amount quoted for that Share Class type's USD or EUR class multiplied by 150.</p> <p>(ii) As accumulation or distribution classes. Please refer to Section 18 “Dividend Policy” of the Prospectus.</p> |              |                                               |                |                  |                                 |                    |
| Share Class           | Share Class Currency                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Sales Charge | Contingent Deferred Sales Charge <sup>1</sup> | Management Fee | Distribution Fee | Operating Expenses <sup>2</sup> | Minimum Investment |

| Class II Shares       | USD                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Nil          | Nil                                           | Up to 2.00 %   | Nil              | Variable                        | USD 5,000          |
| Class IX Shares       | USD                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Nil          | Nil                                           | Up to 1.25 %   | Nil              | Variable                        | USD 5m             |
| Class IO Shares       | USD                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Nil          | Nil                                           | Nil            | Nil              | Variable                        | On application     |
| Class IXO Shares      | USD                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Nil          | Nil                                           | Nil            | Nil              | Variable                        | On application     |

<sup>1</sup> A contingent deferred sales charge is imposed on Class C Shares. Please refer to Section 3 “Description of Share Classes” of the Prospectus for further information.

<sup>2</sup> The Portfolio pays transaction costs, including taxes and brokerage commissions, each time it buys and sells securities or instruments and may also pay Borrowing Costs. Shareholders should note that, these costs are not reflected in the Portfolio's operating expenses, but will be reflected in the Portfolio's performance.

## 7. Special Considerations of the Portfolio

**Certain risks relating to the Portfolio are set out under Section 4 “Risk Considerations” of the Prospectus and in Section 5 “Principal risks of the Portfolio” above. Set out below are additional risk factors in relation to an investment in the Portfolio. For a complete overview of the risk factors, investors should read the abovementioned sections of the Prospectus and the Supplement and the risks identified below.**

The Portfolio may at any time have relatively few or no Tactical Exposures implemented within its portfolio and, as a result, the Portfolio may have concentrated exposures to a limited number of assets or asset classes. This may subject the Portfolio to significant losses. Assets of the Portfolio that are not allocated to Tactical Exposures will be held in cash or invested in instruments deemed appropriate by the Investment Adviser. The Portfolio may be prevented from achieving its objective, or may otherwise perform less favourably, during any period in which the Portfolio's assets are not substantially invested for the purpose of implementing Tactical Exposures.

The Tactical Exposures generated by the Investment Adviser are investment ideas to establish or modify exposures to certain asset classes. With respect to the Tactical Exposures the Investment Adviser determines to implement within the Portfolio, the Investment Adviser will determine, in its sole discretion, the timing and the sizing of each Tactical Exposure to be implemented by the Portfolio and the structure, instruments and techniques that will be used to implement the Tactical Exposure within the Portfolio.

**No Assurance of Accuracy of Replication:** the Portfolio will be implementing an independent trading strategy that attempts to display a pattern of returns over time that broadly resembles the pattern of returns of certain asset classes or basket of asset classes and it should be noted that there are no assurances that such attempts will be successful.

**Portfolio concentration:** Although the strategy of the Portfolio of investing in a limited number of Factors, markets, sectors or assets has the potential to generate attractive returns over time, it may increase the volatility of the Portfolio's investment performance as compared to funds that invest in a larger number of Factors, markets, sectors or assets. If the Factors, markets, sectors or assets in which the Portfolio invest perform poorly, the Portfolio could incur greater losses than if it had invested in a larger number of Factors, markets, sectors or assets.

**Short Exposure to the Factors, markets, sectors or assets:** The Risk Premia Exposures may also provide that the weight of a Factor, market, sector or asset in the Portfolio is negative, i.e. a synthetic short position in the relevant Factor, market, sector or asset. Shareholders should be aware that an investment in the Portfolio is not the same as a long position in each Factor, market, sector or asset, and that an investment in the Portfolio may decline in value from month to month, even if the value of any or all of the Factors, markets, sectors or assets increases during that timeframe.

**Shareholders will have no rights with respect to the Factors, markets, sectors or assets in the Portfolio**

**Volatility:** The Factors, markets, sectors or assets included in the Portfolio can be highly volatile, which means that their value may increase or decrease significantly over a short period of time. In particular, the Portfolio may be highly volatile in terms of performance because the Portfolio may combine long and/or short positions in liquid instruments across the market. It is impossible to predict the future performance of the Factors, markets, sectors or assets based on their historical performance. The return on an investment linked to any Factors, markets, sectors or assets may vary substantially from time to time. Volatility in one or more Factors, markets, sectors or assets will increase the risk of an adverse effect on such a return caused by a fluctuation in the value of one or more of the Factors, markets, sectors or assets.

Similarly, the Portfolio may involve exposure to speculative and extremely volatile investments. Such investments may be affected by a variety of factors that are unpredictable, including, without limitation, weather, governmental programs and policies, national and international political, military, terrorist and economic events, changes in supply and demand relationships, changes in interest and exchange rates and changes, suspensions or disruptions of market trading activities in the investments. Such factors may have a differing effect on the Factors, markets, sectors or assets and the value of the Portfolio with exposure thereto; and different factors may cause the value and volatility of different Factors, markets, sectors or assets to move in inconsistent directions and at inconsistent rates.

### 3. Goldman Sachs Global Dynamic Bond Plus Portfolio

#### 1. Investment Objective

The Portfolio will seek to achieve attractive total returns through both capital appreciation and income generation from a portfolio of investments primarily in the global fixed income and currency markets. The Portfolio will mainly invest in currencies, publicly traded securities and financial derivative instruments. As part of its investment process, the Investment Adviser seeks to promote environmental and social characteristics based on the Investment Adviser's application of certain environmental, social and governance ("ESG") criteria as described below.

#### 2. Investment Policies

Goldman Sachs Global Strategic Macro Bond Portfolio and Goldman Sachs Global Dynamic Bond Plus Portfolio generally use similar investment strategies.

These investment strategies include: interest rate, country and currency related investment strategies, sector allocation, security selection in (i) corporate debt, (ii) government/swap debt, (iii) securitised debt, and (iv) Emerging Markets debt, each of which is further detailed below. Shareholders should note that, the Investment Adviser may effect relative value views between the below strategies or add new or remove investment strategies from time to time in its sole discretion.

- (i) **Tactical Duration** - Directional views in interest rate markets and yield curve shape (i.e. the yields offered on bonds across different maturities). Conviction and impact of any such views on the risk profile of the Portfolio are determined by the size of the deviation between the Investment Adviser's view and of that discounted by the market.
- (ii) **Country** - Relative value views between interest rates across markets. Develops individual country views using a "balance sheet" research approach, using quantitative tools as an overlay to the process.
- (iii) **Currency** - Relative value currency decisions across both developed and Emerging Markets. Employs a flexible, economics-based process by analysing a blend of technical, fundamental, economic, and political factors including: fund flows, macroeconomics, risk climate, market positioning.
- (iv) **Sector Allocation** - Sets portfolio weightings for major sectors of the fixed income market considering, amongst other things, global economic cycle, global liquidity trends, supply/demand, regulatory developments.
- (v) **Corporate Credit** - Opportunistic relative value views within Investment Grade and High Yield markets. Employs a credit research process that articulates the Investment Adviser's reasons for owning securities, provides consistent criteria for relative value analysis and provides a basis for future decisions during market fluctuations.
- (vi) **Government/Swaps** - Seeks to take advantage of yield curve anomalies including: current curve pricing, market conditions and opportunities in individual sector curves.
- (vii) **Liquid Mortgages** - Relative value views within the agency mortgage-backed securities market. Key factors include coupon selection, specified pool, liquidity strategies and seasoning strategies. Provides diversification through sector selection by identifying securities with undervalued prepayment options.
- (viii) **Emerging Markets** - Sector selection within Emerging Markets debt: external debt, local rates, currency and corporate debt. Selects securities by finding dislocations in the market (e.g. yield curve anomalies, relative value between Emerging Markets corporates and Investment Grade corporates, mis-pricings due to technical factors).

As compared to the Goldman Sachs Global Strategic Macro Bond Portfolio, this Portfolio will in general aim to have a similar level of exposure to the investment strategies set out above and a similar target risk/return. The Portfolio's historical tracking error and excess return figures can be found in the Monthly Fund Updates at [www.gsam.com](http://www.gsam.com), along with the historical figures for the other Portfolios referred to above.

The global fixed income markets are constantly evolving and highly diverse and inefficiencies in these complex markets can cause bond prices to diverge from their fair value. The Portfolio seeks to capitalise on these inefficiencies and generate consistent risk-adjusted performance by (i) combining diversified sources of return by employing multiple strategies as described above, (ii) emphasising a risk managed approach within an unconstrained strategy, utilising risk budgets and target volatility and seeking to manage correlation risk, (iii) taking a global perspective to uncover relative value opportunities and (iv) seeking to identify short term mis-pricings and incorporate long-term views.

The Portfolio will invest mainly in currencies, fixed income securities and financial derivative instruments. Fixed income securities may include, but are not limited to, government bonds, government agency bonds, supranational bonds, asset-backed securities, mortgage-backed securities, collateralised loan obligations, collateralised debt obligations, corporate bonds (including corporate high yield bonds and CoCos (see below), and Emerging Markets debt.

The Investment Adviser implements a multi-faceted approach to Environmental, Social and Governance (ESG) considerations (“ESG Criteria”) into its fundamental investment process. Further details of the ESG characteristics of the Portfolio can be found in the Portfolio’s relevant Appendix in Supplement V of the Prospectus.

The Portfolio may invest in PRC Debt Securities, including via Bond Connect and/or the CIBM Direct Access as applicable. Please refer to Paragraph 4.2.11 “Investments in China” of the Prospectus.

The Portfolio may invest in excess of 20% of its net assets in mortgage and asset-backed securities either directly or indirectly via a financial index, including but not limited to CMBX. The Portfolios may invest in/obtain exposure to mortgage and asset-backed securities that are rated Investment Grade or non-Investment Grade. The issuers of such mortgage and asset-backed securities may include but are not limited to government agencies and/or government sponsored enterprises and special purpose vehicles sponsored by banks.

The Portfolio may also hold bank deposits at sight, such as cash held in current accounts with a bank accessible at any time. Such holdings may only temporarily exceed 20% of the net assets of the Portfolio under exceptionally unfavourable market conditions. Moreover, cash equivalents such as deposits, Money Market Instruments and other short-term debt obligations, money market funds and repurchase agreements with banks and broker-dealers may be used for the purpose of cash management and in case of unfavourable conditions, provided that the Investment Adviser considers this to be in the best interests of the Shareholders.

The Portfolio may invest up to 10% of its net assets in Permitted Funds.

This Portfolio may invest in CoCos. Please read Section 2 “Investment Objectives and Policies” and 4 “Risk Considerations” of the Prospectus for additional disclosure and a further description of risk factors.

The Investment Adviser intends to engage in SFTR techniques on, amongst other things, equity securities, markets, interest rates, credit, currencies, commodity indices and other Permitted Investments in line with the exposures set out below (in each case as a percentage of net asset value).

| Type of transaction                                    | Under normal circumstances it is generally expected that the principal amount of such transactions would represent a proportion of the Portfolio's net asset value indicated below.* | Under normal circumstances, it is expected that the principal amount of the Portfolio's assets that can be subject to the transaction may represent up to a maximum of the proportion of the Portfolio's net asset value indicated below. |
|--------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Total return swaps                                     | 3%                                                                                                                                                                                   | 50%                                                                                                                                                                                                                                       |
| Repurchase, including reverse repurchase, transactions | 0%                                                                                                                                                                                   | 50%                                                                                                                                                                                                                                       |
| Securities lending transactions                        | 0%                                                                                                                                                                                   | 15%                                                                                                                                                                                                                                       |

\*In certain circumstances this proportion may be higher.

### 3. Investment Techniques

The Investment Adviser in particular may use certain techniques, through the use of financial derivative instruments, as described in Section 2 “Goldman Sachs Funds - Calculation of Global Exposure and Expected Level of Leverage” of the Supplement, which may result in both net long and net short exposures in, amongst other things, interest rates, credit and currencies, and other Permitted Investments as part of the Portfolio’s general investment policy, to generate returns and/or for hedging purposes. Furthermore, the Portfolio may engage in financial derivative transactions including, but not limited to, swaps, futures contracts, options, reverse repurchase agreements, and other transactions involving currency and interest rate hedging, security hedging or other strategies to manage risk relating to the Portfolio’s investments, to leverage the Portfolio and to establish speculative positions.

The financial derivative instruments will enable the Investment Adviser to, amongst other things:

- (i) hedge an exposure;
- (ii) use as a substitute for taking a position in the underlying asset;
- (iii) establish or adjust interest rate exposure; and/or
- (iv) establish or adjust an exposure to a particular issuer, sector, currency, country or index.

Please also refer to Appendix C – “Derivatives and Efficient Portfolio Management Techniques” together with Section 4 “Risk Considerations” in the Prospectus (and in particular Paragraph 4.6 “Investments in derivatives”) and Section 2 “Goldman Sachs Funds - Calculation of Global Exposure and Expected Level of Leverage” of the Supplement for further information on the use of financial derivative instruments, their purposes and some of the risk considerations associated with them.

### 4. Calculation of Global Exposure and Expected Level of Leverage

The table below sets out for this Portfolio the information mentioned in Section 2 “Goldman Sachs Funds - Calculation of Global Exposure and Expected Level of Leverage” of the Supplement.

| Market Risk Calculation | Limit | Reference Portfolio/Benchmark* | Expected Level of Leverage                 |
|-------------------------|-------|--------------------------------|--------------------------------------------|
|                         |       |                                | Gross Sum of Notionals<br>(Gross Exposure) |
| Absolute VaR            | 20%   | ICE BofA 3 month US T-Bill *   | 500%-1500%**                               |

\*For performance reporting purposes, the Portfolio will use the ICE BofA 3 month US T-Bill as a reference benchmark. The Portfolio is actively managed and is not designed to track its Reference Portfolio/Benchmark. Therefore the performance of the Portfolio and the Reference Portfolio/Benchmark may deviate.

The Portfolio may offer Share Classes which are denominated in or hedged into currencies other than the Base Currency of the Portfolio. Accordingly, the Reference Portfolio/Benchmark noted above may be denominated in or hedged into the relevant currency of a particular Share Class.

\*\*This expected range of leverage is not a limit and may vary over time as described below. The actual levels may deviate from the stated range.

Given that many of the strategies used by the Portfolio are implemented through the use of financial derivative instruments, including those referred to in Section 2 “Goldman Sachs Funds - Calculation of Global Exposure and Expected Level of Leverage” of the Supplement, the expected level of leverage, as calculated under the gross sum of notionals exposures, may be relatively high. This is particularly emphasised in the tactical duration, country, currency and government/swap debt strategies which often involve the use of interest rate futures, swaps and forward currency contracts which result in relatively higher levels of notional exposure from such financial derivative

instruments. It also means that the expected level of leverage may exceed the stated range, particularly as a result of effecting certain investment exposures and also as a result of investor redemptions that can result in offsetting financial derivative instruments trades being placed which whilst they reduce investment exposure can increase leverage based on the gross sum of notionals calculation.

Shareholders should note that leverage resulting from the use of financial derivative instruments may result in magnified losses. However, the “Expected Level of Leverage” using the gross sum of notionals in the table above does not necessarily provide an appropriate illustration of the overall risk profile of the Portfolio as financial derivative instruments are used to manage risk as well as to seek return. This is largely due to the fact that the gross sum of notional exposure calculation simply aggregates the absolute sum of all long and short financial derivative instrument positions, even if the financial derivative instruments are for hedging or offsetting purposes. Further the gross sum of notionals calculation uses just notional values rather than measures that calculate the overall contributions to risk which will often explain why the leverage levels under this method appear high. By way of illustration, to achieve a desired level of investment risk in interest rate markets, the amount of gross leverage used to achieve this risk will vary significantly depending on the underlying market risk (or ‘duration’) of the instrument chosen to implement this investment decision. For example, using an instrument with less duration risk - such as a shorter maturity interest rate derivative - requires more leverage to achieve the higher amount of required notional market exposure, compared to using a longer maturity instrument with higher duration risk. In this example, a 2 year maturity interest rate derivative would require approximately 4 times as much notional exposure compared to using a 10 year maturity instrument.

Please refer to Paragraph 1 “Investment Objective” and Paragraph 2 “Investment Policies” of this Appendix for further information on the relevant Portfolio’s strategy and the Synthetic Risk and Reward Indicator (SRRRI) in the KIID of the Portfolio for details on such Portfolio’s historic risk profile where applicable. Further details on the average leverage levels, as calculated using the gross sum of notionals exposures, will be disclosed in the Fund’s annual financial statements for the relevant accounting period.

## 5. Principal Risks of the Portfolio

Investing in the Portfolio implies (without limitation) the following risk factors which are listed in the same order than in the Prospectus:

- 4.2 Investment risks and in particular 4.2.9 Emerging Markets and 4.2.11 Investments in China
- 4.4 Investment in debt securities
- 4.6 Investment in derivatives
- 4.7 Other investments
- 4.9 Leverage and hedging
- 4.10 Currency risks
- 4.11 Currency hedging

The Portfolio may be exposed to sustainability risks from time to time. A sustainability risk is defined in the EU Sustainable Finance Disclosure Regulation as an environmental, social or governance event or condition that could cause an actual or a potential material negative impact on the value of investments. The universe of sustainability events or conditions is very broad, and their relevance, materiality and impact on investments will depend on a number of factors such as the investment strategy pursued by the Portfolio, asset class, asset location and asset sector. Depending on the circumstances, examples of sustainability risks can include physical environmental risks, climate change transition risks, supply chain disruptions, improper labour practices, lack of board diversity and corruption. If they materialise, sustainability risks can reduce the value of underlying investments held within the Portfolio and could have a material impact on the performance and returns of the Portfolio.

The Investment Adviser does not operate a risk framework that is specifically tailored to sustainability risks. Rather relevant sustainability risks may be considered as part of the processes adopted by the Investment Adviser to monitor and manage general market risks. Accordingly, the Investment Adviser may integrate sustainability risks in its investment decision making process by having regard to material sustainability events that cause or are reasonably expected to cause broad disruption to economic growth, investor sentiment and asset flows in its ongoing assessment and monitoring of financial markets and the investment risk profile of the Portfolio.

The Investment Adviser may utilise proprietary and/or third-party tools and research to assess and monitor market risks that are relevant to the Portfolio.

Please refer to the relevant paragraphs of Section 4 “Risk Considerations” in the Prospectus which includes further relevant risk considerations.

## 6. Portfolio Share Class Table

The following table sets out the Share Classes of this Portfolio. For further details on the Share Classes, please refer to Section 3 “Description of Share Classes” of the Prospectus.

| Base Currency:        | USD                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |              |                                               |                |                  |                                 |                                |                    |
|-----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|-----------------------------------------------|----------------|------------------|---------------------------------|--------------------------------|--------------------|
| Additional Notes:     | <p>Each type of Share Class may also be offered:</p> <p>(i) Denominated in or hedged into the following currencies: USD, EUR, GBP, ISK, JPY, CHF, HKD, SGD, CAD, SEK, NOK, DKK, AUD, NZD, INR, RMB, IDR, PLN and BRL. The Sales Charge, Management Fee, distribution fee, Performance Fee, Redemption Charge and operating expenses (in each case, where applicable) for these additional Share Classes are the same as for the relevant Share Class type in the below table. The amount of the investment minimum for these Share Classes in each of the following currencies is the same amount in the relevant currency as the amount quoted for that Share Class type's USD or EUR class in the below table: USD, EUR, GBP, CHF, HKD, SGD, CAD, AUD, NZD (e.g., the minimum for the Class I Shares (GBP) class is GBP 1m). In the case of JPY, INR, BRL, IDR, PLN and RMB, the investment minimum will be equal to the amount quoted for that Share Class type's USD or EUR class multiplied by 100, 40, 2, 10,000, 3 and 6 respectively. In the case of DKK, NOK and SEK, the investment minimum will be equal to the amount quoted for that Share Class type's USD or EUR class multiplied by 6, 7 and 8 respectively. In the case of ISK, the investment minimum will be equal to the amount quoted for that Share Class type's USD or EUR class multiplied by 150.</p> <p>(ii) As accumulation or distribution classes. Please refer to Section 18 “Dividend Policy” of the Prospectus.</p> |              |                                               |                |                  |                                 |                                |                    |
| Share Class           | Currency                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Sales Charge | Contingent Deferred Sales Charge <sup>1</sup> | Management Fee | Distribution Fee | Operating Expenses <sup>2</sup> | Redemption Charge <sup>3</sup> | Minimum Investment |

| Class IXO Shares | USD | Nil | Nil | N/A | Nil | Variable | Nil | On application |
|------------------|-----|-----|-----|-----|-----|----------|-----|----------------|

<sup>1</sup> A contingent deferred sales charge is imposed on Class C Shares. Please refer to Section 3 “Description of Share Classes” of the Prospectus for further information.

<sup>2</sup> The Portfolio pays transaction costs, including taxes and brokerage commissions, each time it buys and sells securities or instruments and may also pay Borrowing Costs. Shareholders should note that, these costs are not reflected in the Portfolio’s operating expenses, but will be reflected in the Portfolio’s performance.

<sup>3</sup> As described in Section 3 of the Prospectus, a Redemption Charge will only be payable on any redemption or exchange of “G” Shares within two years from the date of purchase.

## 4. Goldman Sachs Global Fixed Income Plus Portfolio (Hedged)

### 1. Investment Objective

The investment objective of the Portfolio is a high level of total return consisting of income and capital appreciation through investment in Permitted Investments. The Portfolio will generally seek to hedge non-Base Currency exposure from its investments to the Base Currency. There may however be active investment management currency exposures in the Portfolio where the Investment Adviser seeks to generate return. As part of its investment process, the Investment Adviser seeks to promote environmental and social characteristics based on the Investment Adviser's application of certain environmental, social and governance ("ESG") criteria as described below.

### 2. Investment Policies

The Portfolio uses the following investment strategies: interest rate, country and currency related investment strategies, sector allocation, security selection in (i) corporate debt, (ii) government/swap debt, (iii) securitised debt, and (iv) Emerging Markets debt, each of which is further detailed below. Shareholders should note that, the Investment Adviser may effect relative value views between the below strategies or add new or remove investment strategies from time to time in its sole discretion.

- (i) **Tactical Duration** – Directional views in interest rate markets and yield curve shape (i.e. the yields offered on bonds across different maturities). Conviction and impact of any such views on the risk profile of the Portfolio are determined by the size of the deviation between the Investment Adviser's view and of that discounted by the market.
- (ii) **Country** – Relative value views between interest rates across markets. Develops individual country views using a "balance sheet" research approach, using quantitative tools as an overlay to the process.
- (iii) **Currency** – Relative value currency decisions across both developed and Emerging Markets. Employs a flexible, economics-based process by analysing a blend of technical, fundamental, economic, and political factors including: fund flows, macroeconomics, risk climate, market positioning.
- (iv) **Sector Allocation** – Sets portfolio weightings for major sectors of the fixed income market considering, amongst other things, global economic cycle, global liquidity trends, supply/demand, regulatory developments.
- (v) **Corporate Credit** – Opportunistic relative value views within Investment Grade and High Yield markets. Employs a credit research process that articulates the Investment Adviser's reasons for owning securities, provides consistent criteria for relative value analysis and provides a basis for future decisions during market fluctuations.
- (vi) **Government/Swaps** – Seeks to take advantage of yield curve anomalies including: current curve pricing, market conditions and opportunities in individual sector curves.
- (vii) **Liquid Mortgages** – Relative value views within the agency mortgage-backed securities market. Key factors include coupon selection, specified pool, liquidity strategies and seasoning strategies. Provides diversification through sector selection by identifying securities with undervalued prepayment options.
- (viii) **Emerging Markets** – Sector selection within Emerging Markets debt: external debt, local rates, currency and corporate debt. Selects securities by finding dislocations in the market (e.g. yield curve anomalies, relative value between Emerging Markets corporates and Investment Grade corporates, mis-pricings due to technical factors).

As compared to Goldman Sachs Global Fixed Income Portfolio (Hedged), this Portfolio will in general seek to achieve increased exposures to the investment strategies set out above. The Portfolio's historical tracking error and excess return figures can be found in the Monthly Fund Updates at [www.gsam.com](http://www.gsam.com).

The global fixed income markets are constantly evolving and highly diverse and inefficiencies in these complex markets can cause bond prices to diverge from their fair value. The Portfolio seeks to capitalise on these inefficiencies

and generate consistent risk-adjusted performance by (i) combining diversified sources of return by employing multiple strategies as described above, (ii) emphasising a risk managed approach utilising risk budgets and target volatility and seeking to manage correlation risk, (iii) taking a global perspective to uncover relative value opportunities and (iv) seeking to identify short term mis-pricings and incorporate long-term views.

Under normal market conditions, the Portfolio will invest at least two thirds of its net assets (excluding cash and cash-equivalents) in bonds.

The Investment Adviser implements a multi-faceted approach to Environmental, Social and Governance (ESG) considerations (“ESG Criteria”) into its fundamental investment process. Further details of the ESG characteristics of the Portfolio can be found in the Portfolio’s relevant Appendix in Supplement V of the Prospectus.

Permitted securities may, subject to the aforementioned restrictions, include all types of debt securities subject to such limitations as may apply under Luxembourg law and the Portfolio’s investment policy, including, but not limited to, fixed and floating rate, senior and subordinated corporate debt obligations (such as bonds, CoCos (see below), debentures, notes and commercial paper), Brady bonds and other debt issued by governments, their agencies and instrumentalities, or by central banks, convertible debt obligations, asset-backed securities, mortgage-backed securities, collateralised loan obligations, collateralised debt obligations, and reverse repurchase agreements.

The Portfolio may invest in PRC Debt Securities, including via Bond Connect and/or the CIBM Direct Access as applicable. Please refer to Paragraph 4.2.11 “Investments in China” of the Prospectus.

The Portfolio may invest in excess of 20% of its net assets in mortgage and asset-backed securities either directly or indirectly via a financial index, including but not limited to CMBX. The Portfolio may invest in/obtain exposure to mortgage and asset-backed securities that are rated Investment Grade or non-Investment Grade. The issuers of such mortgage and asset-backed securities may include but are not limited to government agencies and/or government sponsored enterprises and special purpose vehicles sponsored by banks.

The Portfolio may invest up to 10% of its net assets in Permitted Funds.

The Portfolio may also hold bank deposits at sight, such as cash held in current accounts with a bank accessible at any time. Such holdings may only temporarily exceed 20% of the net assets of the Portfolio under exceptionally unfavourable market conditions. Moreover, cash equivalents such as deposits, Money Market Instruments and other short-term debt obligations, money market funds and repurchase agreements with banks and broker-dealers may be used for the purpose of cash management and in case of unfavourable conditions, provided that the Investment Adviser considers this to be in the best interests of the Shareholders.

This Portfolio may invest in CoCos. Please read Section 2 “Investment Objectives and Policies” and 4 “Risk Considerations” of the Prospectus for additional disclosure and a further description of risk factors.

The Investment Adviser intends to engage in SFTR techniques on, amongst other things, equity securities, markets, interest rates, credit, currencies, commodity indices and other Permitted Investments in line with the exposures set out below (in each case as a percentage of net asset value).

| Type of transaction                                    | Under normal circumstances it is generally expected that the principal amount of such transactions would represent a proportion of the Portfolio’s net asset value indicated below.* | Under normal circumstances it is generally expected that the principal amount of the Portfolio’s assets that can be subject to the transaction may represent up to a maximum of the proportion of the Portfolio’s net asset value indicated below. |
|--------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Total return swaps                                     | 0%                                                                                                                                                                                   | 50%                                                                                                                                                                                                                                                |
| Repurchase, including reverse repurchase, transactions | 0%                                                                                                                                                                                   | 50%                                                                                                                                                                                                                                                |
| Securities lending transactions                        | 0%                                                                                                                                                                                   | 15%                                                                                                                                                                                                                                                |

\*In certain circumstances this proportion may be higher.

### 3. Investment Techniques

The Investment Adviser in particular may use certain techniques, through the use of financial derivative instruments, as described in Section 2 “Goldman Sachs Funds - Calculation of Global Exposure and Expected Level of Leverage” of the Supplement, which may result in both net long and net short exposures in, amongst other things, interest rates, credit and currencies, and other Permitted Investments as part of the Portfolio’s general investment policy, to generate returns and/or for hedging purposes. Furthermore, the Portfolio may engage in financial derivative transactions including, but not limited to, swaps, futures contracts, options, reverse repurchase agreements, and other transactions involving currency and interest rate hedging, security hedging or other strategies to manage risk relating to the Portfolio’s investments, to leverage the Portfolio and to establish speculative positions.

The financial derivative instruments will enable the Investment Adviser to, amongst other things:

- (i) hedge an exposure;
- (ii) use as a substitute for taking a position in the underlying asset;
- (iii) establish or adjust interest rate exposure; and/or
- (iv) establish or adjust an exposure to a particular issuer, sector, currency, country or index.

Please also refer to Appendix C – “Derivatives and Efficient Portfolio Management Techniques” together with Section 4 “Risk Considerations” in the Prospectus (and in particular Paragraph 4.6 “Investments in derivatives”) and Section 2 “Goldman Sachs Funds - Calculation of Global Exposure and Expected Level of Leverage” of the Supplement for further information on the use of financial derivative instruments, their purposes and some of the risk considerations associated with them.

### 4. Calculation of Global Exposure and Expected Level of Leverage

The table below sets out for this Portfolio the information mentioned in Section 2 “Goldman Sachs Funds - Calculation of Global Exposure and Expected Level of Leverage” of the Supplement.

| Market Risk Calculation | Limit | Reference Portfolio/Benchmark*                 | Expected Level of Leverage                 |
|-------------------------|-------|------------------------------------------------|--------------------------------------------|
|                         |       |                                                | Gross Sum of Notionals<br>(Gross Exposure) |
| Relative VaR            | 2x    | Bloomberg Global Aggregate Index (Euro-Hedged) | 200%-1200%**                               |

\*The Portfolio is actively managed and is not designed to track its Reference Portfolio/Benchmark. Therefore the performance of the Portfolio and the Reference Portfolio/Benchmark may deviate.

The Portfolio may offer Share Classes which are denominated in or hedged into currencies other than the Base Currency of the Portfolio. Accordingly, the Reference Portfolio/Benchmark noted above may be denominated in or hedged into the relevant currency of a particular Share Class.

\*\*This expected range of leverage is not a limit and may vary over time as described below. The actual levels may deviate from the stated range.

Given that many of the strategies used by the Portfolio are implemented through the use of financial derivative instruments, including those referred to in Section 2 “Goldman Sachs Funds - Calculation of Global Exposure and Expected Level of Leverage” of the Supplement, the expected level of leverage, as calculated under the gross sum of notionals exposures, may be relatively high. Pursuit of the investment objective may involve the use of swaps (such as short term interest rate swaps, total return swaps or equity swaps), options, futures and forward currency contracts, which may result in relatively higher levels of notional exposure. For further information on the use of financial derivative instruments and associated risks, please refer to Section 4 “Risk Considerations” and Appendix C “Derivatives and Efficient Portfolio Management Techniques” in the Prospectus. It also means that the expected level of leverage may exceed the stated range, particularly as a result of effecting certain investment exposures and also as a result of investor redemptions that can result in offsetting financial derivative instruments trades being

placed which whilst they reduce investment exposure can increase leverage based on the gross sum of notionals calculation.

Shareholders should note that leverage resulting from the use of financial derivative instruments may result in magnified losses. However, the “Expected Level of Leverage” using the gross sum of notionals in the table above does not necessarily provide an appropriate illustration of the overall risk profile of the Portfolio as financial derivative instruments are used to manage risk as well as to seek return. This is largely due to the fact that the gross sum of notional exposure calculation simply aggregates the absolute sum of all long and short financial derivative instrument positions, even if the financial derivative instruments are for hedging or offsetting purposes. Further the gross sum of notionals calculation uses just notional values rather than measures that calculate the overall contributions to risk which will often explain why the leverage levels under this method appear high. By way of illustration, to achieve a desired level of investment risk in interest rate markets, the amount of gross leverage used to achieve this risk will vary significantly depending on the underlying market risk (or ‘duration’) of the instrument chosen to implement this investment decision. For example, using an instrument with less duration risk - such as a shorter maturity interest rate derivative - requires more leverage to achieve the higher amount of required notional market exposure, compared to using a longer maturity instrument with higher duration risk. In this example, a 2 year maturity interest rate derivative would require approximately 4 times as much notional exposure compared to using a 10 year maturity instrument.

Please refer to Paragraph 1 “Investment Objective” and Paragraph 2 “Investment Policies” of this Appendix for further information on the relevant Portfolio’s strategy and the Synthetic Risk and Reward Indicator (SRRI) in the KIID of the Portfolio for details on such Portfolio’s historic risk profile where applicable. Further details on the average leverage levels, as calculated using the gross sum of notionals exposures, will be disclosed in the Fund’s annual financial statements for the relevant accounting period.

## 5. Principal Risks of the Portfolio

Investing in the Portfolio implies (without limitation) the following risk factors which are listed in the same order than in the Prospectus:

- 4.2 Investment risks and in particular 4.2.9 Emerging Markets and 4.2.11 Investments in China
- 4.4 Investment in debt securities
- 4.6 Investment in derivatives
- 4.7 Other investments
- 4.9 Leverage and hedging
- 4.10 Currency risks
- 4.11 Currency hedging

The Portfolio may be exposed to sustainability risks from time to time. A sustainability risk is defined in the EU Sustainable Finance Disclosure Regulation as an environmental, social or governance event or condition that could cause an actual or a potential material negative impact on the value of investments. The universe of sustainability events or conditions is very broad, and their relevance, materiality and impact on investments will depend on a number of factors such as the investment strategy pursued by the Portfolio, asset class, asset location and asset sector. Depending on the circumstances, examples of sustainability risks can include physical environmental risks, climate change transition risks, supply chain disruptions, improper labour practices, lack of board diversity and corruption. If they materialise, sustainability risks can reduce the value of underlying investments held within the Portfolio and could have a material impact on the performance and returns of the Portfolio.

The Investment Adviser does not operate a risk framework that is specifically tailored to sustainability risks. Rather relevant sustainability risks may be considered as part of the processes adopted by the Investment Adviser to monitor and manage general market risks. Accordingly, the Investment Adviser may integrate sustainability risks in its investment decision making process by having regard to material sustainability events that cause or are reasonably expected to cause broad disruption to economic growth, investor sentiment and asset flows in its ongoing assessment and monitoring of financial markets and the investment risk profile of the Portfolio.

The Investment Adviser may utilise proprietary and/or third-party tools and research to assess and monitor market risks that are relevant to the Portfolio.

Please refer to the relevant paragraphs of Section 4 “Risk Considerations” in the Prospectus which includes further relevant risk considerations.

## 6. Portfolio Share Class Table

The following table sets out the Share Classes of this Portfolio. For further details on the Share Classes, please refer to Section 3 “Description of Share Classes” of the Prospectus.

| Base Currency:        | EUR                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |              |                                               |                |                  |                                 |                    |
|-----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|-----------------------------------------------|----------------|------------------|---------------------------------|--------------------|
| Additional Notes:     | <p>Each type of Share Class may also be offered:</p> <p>(i) Denominated in or hedged into the following currencies: USD, EUR, GBP, ISK, JPY, CHF, HKD, SGD, CAD, SEK, NOK, DKK, AUD, NZD, INR, RMB, IDR, PLN and BRL. The Sales Charge, Management Fee, distribution fee, Performance Fee and operating expenses (in each case, where applicable) for these additional Share Classes are the same as for the relevant Share Class type in the below table. The amount of the investment minimum for these Share Classes in each of the following currencies is the same amount in the relevant currency as the amount quoted for that Share Class type's EUR or USD or GBP class in the below table: USD, EUR, GBP, CHF, HKD, SGD, CAD, AUD, NZD (e.g., the minimum for the Class I Shares (GBP) class is GBP 1m). In the case of JPY, INR, BRL, IDR, PLN and RMB, the investment minimum will be equal to the amount quoted for that Share Class type's EUR or USD or GBP class multiplied by 100, 40, 2, 10,000, 3 and 6 respectively. In the case of DKK, NOK, and SEK, the investment minimum will be equal to the amount quoted for that Share Class type's EUR or USD or GBP class multiplied by 6, 7 and 8 respectively. In the case of ISK, the investment minimum will be equal to the amount quoted for that Share Class type's USD or EUR class multiplied by 150.</p> <p>(ii) As accumulation or distribution classes. Please refer to Section 18 “Dividend Policy” of the Prospectus.</p> |              |                                               |                |                  |                                 |                    |

<sup>1</sup> A contingent deferred sales charge is imposed on Class C Shares. Please refer to Section 3 “Description of Share Classes” of the Prospectus for further information.

<sup>2</sup>The Portfolio pays transaction costs, including taxes and brokerage commissions, each time it buys and sells securities or instruments and may also pay Borrowing Costs. Shareholders should note that, these costs are not reflected in the Portfolio's operating expenses, but will be reflected in the Portfolio's performance.

## 5. Goldman Sachs Global Strategic Macro Bond Portfolio

### 1. Investment Objective

The Portfolio will seek to achieve attractive total returns primarily through capital appreciation from a portfolio of investments primarily in the global fixed income and currency markets. The Portfolio will mainly invest in fixed income securities, currencies, publicly traded securities and financial derivative instruments. As part of its investment process, the Investment Adviser seeks to promote environmental and social characteristics based on the Investment Adviser's application of certain environmental, social and governance ("ESG") criteria as described below.

### 2. Investment Policies

The Portfolio utilizes the following investment strategies; Duration, Country, Cross Macro, Currency, Government/Swaps, Securitized and Emerging Market Debt, each of which is further detailed below.

The Portfolio does not seek to generate returns from Credit securities (such as Corporate Credit (Investment Grade or High Yield)), non-agency mortgage-backed securities, CLOs, asset-backed securities, Emerging Market external debt or Emerging Market corporates.

Within the Securitized strategy the Portfolio only invests in agency mortgage-backed securities and associated financial derivatives. Within the Emerging Market Debt strategy the Portfolio only invests in Emerging Market local market interest rates and associated financial derivatives.

Shareholders should note that, the Investment Adviser may effect relative value views between the below strategies or add new or remove investment strategies from time to time in its sole discretion.

- (i) **Tactical Duration** - Directional views in interest rate markets and yield curve shape (i.e. the yields offered on bonds across different maturities). Conviction and impact of any such views on the risk profile of the Portfolio are determined by the size of the deviation between the Investment Adviser's view and of that discounted by the market.
- (ii) **Country** - Relative value views between interest rates across markets. Develops individual country views using a "balance sheet" research approach, using quantitative tools as an overlay to the process.
- (iii) **Currency** - Relative value currency decisions across both developed and Emerging Markets. Employs a flexible, economics-based process by analysing a blend of technical, fundamental, economic, and political factors including: fund flows, macroeconomics, risk climate, market positioning.
- (iv) **Government/Swaps** - Seeks to take advantage of yield curve anomalies including: current curve pricing, market conditions and opportunities in individual sector curves.
- (v) **Liquid Mortgages** - Relative value views within the agency mortgage-backed securities market only and associated financial derivative instruments. Key factors include coupon selection, specified pool, liquidity strategies and seasoning strategies. Provides diversification through sector selection by identifying securities with undervalued prepayment options.
- (vi) **Emerging Markets** - Sector selection in Emerging Markets local markets interest and associated financial derivative instruments. Selects securities by finding dislocations in the market (e.g. yield curve anomalies, relative value between Emerging Markets and mis-pricings due to technical factors).

The Portfolio may also employ macro hedging positions at the portfolio level to remove unintended market directional risks, which may enable the Portfolio to pursue returns in a variety of market cycles.

The global fixed income markets are constantly evolving and highly diverse and inefficiencies in these complex markets can cause bond prices to diverge from their fair value.

The Portfolio seeks to capitalise on these inefficiencies and generate consistent risk-adjusted performance by (i) combining diversified sources of return by employing multiple strategies as described above, (ii) emphasising a risk managed approach within an unconstrained strategy, utilising risk budgets and target volatility and seeking to manage correlation risk, (iii) taking a global perspective to uncover relative value opportunities and (iv) seeking to identify short term mis-pricings and incorporate long-term views.

The Portfolio will mainly invest in fixed income securities, currencies, publicly traded securities and financial derivative instruments. Fixed income securities may include, but are not limited to, government bonds, government agency bonds, supranational bonds, mortgage-backed securities, and Emerging Market debt (local only).

In relation to Article 7 of SFDR, which requires disclosure of how principal adverse impacts are considered at Portfolio level, the Investment Manager notes that there are still a number of uncertainties regarding this obligation, in particular due to the absence of centralised implementing standards, local guidance or established market practice. The Investment Manager does not currently take principal adverse impacts on sustainability factors into account in respect of the Portfolio, but will keep its approach in this area for the Portfolio under review.

As per Article 7 of the Taxonomy Regulation, Shareholders should note that investments underlying the Portfolios do not take into account the EU criteria for environmentally sustainable economic activities.

The Portfolio may invest in PRC Debt Securities, including via Bond Connect and/or the CIBM Direct Access as applicable. Please refer to Paragraph 4.2.11 “Investments in China” of the Prospectus.

The Portfolio may invest in excess of 20% of its net assets in agency mortgage-backed securities either directly or indirectly via a financial index. The Portfolios may invest in/obtain exposure to agency mortgage-backed securities that are rated Investment Grade or non-Investment Grade.

The Portfolio may also hold bank deposits at sight, such as cash held in current accounts with a bank accessible at any time. Such holdings may only temporarily exceed 20% of the net assets of the Portfolio under exceptionally unfavourable market conditions. Moreover, cash equivalents such as deposits, Money Market Instruments and other short-term debt obligations, money market funds and repurchase agreements with banks and broker-dealers may be used for the purpose of cash management and in case of unfavourable conditions, provided that the Investment Adviser considers this to be in the best interests of the Shareholders.

The Portfolio may invest up to 10% of its net assets in Permitted Funds.

The Investment Adviser intends to engage in SFTR techniques on, amongst other things, equity securities, markets, interest rates, credit, currencies, commodity indices and other Permitted Investments in line with the exposures set out below (in each case as a percentage of net asset value).

| Type of transaction                                    | Under normal circumstances it is generally expected that the principal amount of such transactions would represent a proportion of the Portfolio's net asset value indicated below.* | Under normal circumstances, it is generally expected that the principal amount of the Portfolio's assets that can be subject to the transaction may represent up to a maximum of the proportion of the Portfolio's net asset value indicated below. |
|--------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Total return swaps                                     | 5%                                                                                                                                                                                   | 50%                                                                                                                                                                                                                                                 |
| Repurchase, including reverse repurchase, transactions | 0%                                                                                                                                                                                   | 50%                                                                                                                                                                                                                                                 |
| Securities lending transactions                        | 0%                                                                                                                                                                                   | 15%                                                                                                                                                                                                                                                 |

\*In certain circumstances this proportion may be higher.

### 3. Additional Investment Restrictions

The Portfolio may invest up to 25% of its net asset value in below Investment Grade securities.

- The Portfolio may only invest into debt securities or other debt instruments that are customarily rated if at the time of purchase (a) securities or instruments have a minimum rating of B minus (by Standard & Poor's and Fitch) or B3 (by Moody's) or comparable ratings of other rating agencies recognised under EU Regulation (EC) No. 1060/2009 or a comparable internal rating by the Investment Adviser and (b) in case of asset-backed securities (including mortgage-backed securities) or credit-linked instruments, the relevant instruments at least have an Investment Grade rating.
- In the event of rating downgrades, which causes the security or instrument to be rated below the limits referred to above under (a) and (b), such securities or instruments may remain in the Portfolio provided their aggregate value does not exceed 3% of the net asset value of the Portfolio. If the aggregate value of securities or instruments downgraded below the aforementioned minimum ratings exceed 3% of the net asset value of the Portfolio, they will generally, absent any extraordinary circumstances, be sold within six months from the day on which the threshold of 3% was exceeded, however, only to the extent of the excess over 3%.
- Please note that certain un-rated securities, including for instance, agency mortgage-backed securities and issues from sovereign bond issuers will have the relevant country rating applied.
- In case of split ratings by recognised rating agencies, the lower of the two highest ratings must be used. Where the lower of the two highest ratings does not meet the requirements stated above, the Investment Adviser may instead decide to replace it with its own internal rating based on quantitative analysis, which may be higher.
- Similarly, where there is only one rating by a recognised rating agency and this does not meet the requirements stated above, the Investment Adviser may instead decide to replace it with its own internal rating based on quantitative analysis, which may be higher. The Portfolio will under no circumstances rely exclusively on external ratings in determining the credit risk of a financial instrument.
- Asset-backed securities and credit-linked instruments in the Portfolio will either be (i) traded on an organised market within the meaning of Article 4 no. 14 of Directive 2004/39/EC (MiFID) or on a non-EU exchange with an equivalent standard of regulation or (ii) be issued by an issuer domiciled in the EEA or an OECD full member state.
- The Portfolio will only invest in other Permitted Funds whose fund rules have equivalent restrictions in respect to the above rating requirements.
- In deviation from the above, the Portfolio may, at the time the investment restrictions in this section become effective, hold securities or instruments which neither at the time of their acquisition nor at the time the investment restrictions in this section become effective had/have the required minimum rating, provided their aggregate value does not exceed 3% of the net asset value of the Portfolio.

### 4. Investment Techniques

The Investment Adviser in particular may use certain techniques, through the use of financial derivative instruments, as described in Section 2 "Goldman Sachs Funds - Calculation of Global Exposure and Expected Level of Leverage" of the Supplement, which may result in both net long and net short exposures in, amongst other things, interest rates, credit and currencies, and other Permitted Investments as part of its general investment policy, to generate returns and/or for hedging purposes. Furthermore, the Portfolio may engage in financial derivative transactions including, but not limited to, swaps, futures contracts, options, reverse repurchase agreements, and other transactions involving currency and interest rate hedging, security hedging or other strategies to manage risk relating to the Portfolio's investments, to leverage the Portfolio and to establish speculative positions.

The financial derivative instruments will enable the Investment Adviser to, amongst other things:

- (i) hedge an exposure;

- (ii) use as a substitute for taking a position in the underlying asset;
- (iii) establish or adjust interest rate exposure; and/or
- (iv) establish or adjust an exposure to a particular issuer, sector, currency, country or index.

Please also refer to Appendix C – “Derivatives and Efficient Portfolio Management Techniques” together with Section 4 “Risk Considerations” in the Prospectus (and in particular Paragraph 4.6 “Investments in derivatives”) and Section 2 “Goldman Sachs Funds - Calculation of Global Exposure and Expected Level of Leverage” of the Supplement for further information on the use of financial derivative instruments, their purposes and some of the risk considerations associated with them.

## 5. Calculation of Global Exposure and Expected Level of Leverage

The table below sets out for this Portfolio the information mentioned in Section 2 “Goldman Sachs Funds - Calculation of Global Exposure and Expected Level of Leverage” of the Supplement.

| Market Risk Calculation | Limit | Reference Portfolio/Benchmark* | Expected Level of Leverage                 |
|-------------------------|-------|--------------------------------|--------------------------------------------|
|                         |       |                                | Gross Sum of Notionals<br>(Gross Exposure) |
| Absolute VaR            | 20%   | ICE BofA 3 month US T-Bill     | 500%-1500%**                               |

\*For performance reporting purposes, the Portfolio will use the ICE BofA 3 month US T-Bill as a reference benchmark. The Portfolio is actively managed and is not designed to track its Reference Portfolio/Benchmark. Therefore the performance of the Portfolio and the Reference Portfolio/Benchmark may deviate.

The Portfolio may offer Share Classes which are denominated in or hedged into currencies other than the Base Currency of the Portfolio. Accordingly, the Reference Portfolio/Benchmark noted above may be denominated in or hedged into the relevant currency of a particular Share Class.

\*\*This expected range of leverage is not a limit and may vary over time as described below. The actual levels may deviate from the stated range.

Given that many of the strategies used by the Portfolio are implemented through the use of financial derivative instruments, including those referred to in Section 2 “Goldman Sachs Funds - Calculation of Global Exposure and Expected Level of Leverage” of the Supplement, the expected level of leverage, as calculated under the gross sum of notionals exposures, may be relatively high. This is particularly emphasised in the tactical duration, country, currency and government/swap debt strategies which often involve the use of interest rate futures, swaps and forward currency contracts which result in relatively higher levels of notional exposure from such financial derivative instruments. It also means that the expected level of leverage may exceed the stated range, particularly as a result of effecting certain investment exposures and also as a result of investor redemptions that can result in offsetting financial derivative instruments trades being placed which whilst they reduce investment exposure can increase leverage based on the gross sum of notionals calculation.

Shareholders should note that leverage resulting from the use of financial derivative instruments may result in magnified losses. However, the “Expected Level of Leverage” using the gross sum of notionals in the table above does not necessarily provide an appropriate illustration of the overall risk profile of the Portfolio as financial derivative instruments are used to manage risk as well as to seek return. This is largely due to the fact that the gross sum of notional exposure calculation simply aggregates the absolute sum of all long and short financial derivative instrument positions, even if the financial derivative instruments are for hedging or offsetting purposes. Further the gross sum of notionals calculation uses just notional values rather than measures that calculate the overall contributions to risk which will often explain why the leverage levels under this method appear high. By way of illustration, to achieve a desired level of investment risk in interest rate markets, the amount of gross leverage used to achieve this risk will vary significantly depending on the underlying market risk (or ‘duration’) of the instrument chosen to implement this investment decision. For example, using an instrument with less duration risk - such as a shorter maturity interest rate derivative - requires more leverage to achieve the higher amount of required notional market exposure, compared to using a longer maturity instrument with higher duration risk. In this example, a 2 year maturity interest rate derivative would require approximately 4 times as much notional exposure compared to using a 10 year maturity instrument.

Please refer to Paragraph 1 “Investment Objective” and Paragraph 2 “Investment Policies” of this Appendix for further information on the relevant Portfolio’s strategy and the Synthetic Risk and Reward Indicator (SRRI) in the KIID of the Portfolio for details on such Portfolio’s historic risk profile where applicable. Further details on the average leverage levels, as calculated using the gross sum of notionals exposures, will be disclosed in the Fund’s annual financial statements for the relevant accounting period.

## 6. Performance Fees

The Investment Adviser is entitled to receive a performance fee for certain Share Classes of the Portfolio (the “Performance Fee”) equal to 10 percent of the amount by which the net asset value per Share (please see Section 17 “Determination of Net Asset Value” in the Prospectus) exceeds the Adjusted High Water Mark (as more fully described under Section 19 “Fees and Expenses” of the Prospectus). The Performance Fee is calculated and accrues daily and is payable either annually in arrears or when a redemption takes place out of the assets attributable to the Share Class. A separate Performance Fee calculation shall be carried out in respect of each relevant Share Class of the Portfolio.

## 7. Principal Risks of the Portfolio

Investing in the Portfolio implies (without limitation) the following risk factors which are listed in the same order than in the Prospectus:

- 4.2 Investment risks and in particular 4.2.9 Emerging Markets and 4.2.11 Investments in China
- 4.4 Investment in debt securities
- 4.6 Investment in derivatives
- 4.7 Other investments
- 4.9 Leverage and hedging
- 4.10 Currency risks
- 4.11 Currency hedging

The Portfolio may be exposed to sustainability risks from time to time. A sustainability risk is defined in the EU Sustainable Finance Disclosure Regulation as an environmental, social or governance event or condition that could cause an actual or a potential material negative impact on the value of investments. The universe of sustainability events or conditions is very broad, and their relevance, materiality and impact on investments will depend on a number of factors such as the investment strategy pursued by the Portfolio, asset class, asset location and asset sector. Depending on the circumstances, examples of sustainability risks can include physical environmental risks, climate change transition risks, supply chain disruptions, improper labour practices, lack of board diversity and corruption. If they materialise, sustainability risks can reduce the value of underlying investments held within the Portfolio and could have a material impact on the performance and returns of the Portfolio.

The Investment Adviser does not operate a risk framework that is specifically tailored to sustainability risks. Rather relevant sustainability risks may be considered as part of the processes adopted by the Investment Adviser to monitor and manage general market risks. Accordingly, the Investment Adviser may integrate sustainability risks in its investment decision making process by having regard to material sustainability events that cause or are reasonably expected to cause broad disruption to economic growth, investor sentiment and asset flows in its ongoing assessment and monitoring of financial markets and the investment risk profile of the Portfolio.

The Investment Adviser may utilise proprietary and/or third-party tools and research to assess and monitor market risks that are relevant to the Portfolio.

Please refer to the relevant paragraphs of Section 4 “Risk Considerations” in the Prospectus which includes further relevant risk considerations.

## 8. Portfolio Share Class Table

The following table sets out the Share Classes of this Portfolio. For further details on the Share Classes, please refer to Section 3 “Description of Share Classes” of the Prospectus

| Base Currency:               | USD                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |              |                                               |                |                  |                                      |                                 |                                |                    |
|------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|-----------------------------------------------|----------------|------------------|--------------------------------------|---------------------------------|--------------------------------|--------------------|
| Additional Notes:            | <p>Each type of Share Class may also be offered:</p> <p>(i) Denominated in or hedged into the following currencies: USD, EUR, GBP, ISK, JPY, CHF, HKD, SGD, CAD, SEK, NOK, DKK, AUD, NZD, INR, BRL, RMB, IDR, BRL and PLN. The Sales Charge, Management Fee, distribution fee, Performance Fee, Redemption Charge and operating expenses (in each case, where applicable) for these additional Share Classes are the same as for the relevant Share Class type in the below table. The amount of the investment minimum for these Share Classes in each of the following currencies is the same amount in the relevant currency as the amount quoted for that Share Class type's USD or EUR class in the below table: USD, EUR, GBP, CHF, HKD, SGD, CAD, AUD, NZD (e.g., the minimum for the Class I Shares (GBP) class is GBP 1m). In the case of JPY, INR, BRL, IDR, RMB and PLN, the investment minimum will be equal to the amount quoted for that Share Class type's USD or EUR class multiplied by 100, 40, 2, 10,000, 6 and 3 respectively. In the case of DKK, NOK and SEK, the investment minimum will be equal to the amount quoted for that Share Class type's USD or EUR class multiplied by 6, 7 and 8 respectively. In the case of ISK, the investment minimum will be equal to the amount quoted for that Share Class type's USD or EUR class multiplied by 150.</p> <p>(ii) As accumulation or distribution classes. Please refer to Section 18 “Dividend Policy” of the Prospectus.</p> |              |                                               |                |                  |                                      |                                 |                                |                    |

<sup>1</sup> A contingent deferred sales charge is imposed on Class C and Class C (Flat) Shares. Please refer to Section 3 “Description of Share Classes” of the Prospectus for further information.

<sup>2</sup> Investors should be aware that for Share Classes which charge performance fees, the total fees paid by a Shareholder in the performance fee Share Class may be higher than the total fees paid by a Shareholder invested in the equivalent Share Class type without performance fees in the event a Portfolio performs above a certain threshold but may be lower if the Portfolio performs below a certain threshold. It should be noted that where swing pricing has been applied to the Net Asset Value of a share class, performance fees are accrued based on the Net Asset Value of the share class before the application of swing pricing. Please refer to Section 17 “Determination of Net Asset Value” of the Prospectus for further information on swing pricing.

<sup>3</sup> The Portfolio pays transaction costs, including taxes and brokerage commissions, each time it buys and sells securities or instruments and may also pay Borrowing Costs. Shareholders should note that, these costs are not reflected in the Portfolio’s operating expenses, but will be reflected in the Portfolio’s performance.

<sup>4</sup> As described in Section 3 of the Prospectus, a Redemption Charge will only be payable on any redemption or exchange of “G” Shares within two years from the date of purchase.

Supplement III to the Prospectus

- Global Manager Strategies Portfolios

## This Supplement

The purpose of this Supplement is to describe in more detail those Portfolios of the Fund which are managed by the Management Company, the Investment Adviser and their Affiliates under the Global Manager Strategies Programme (referred to herein as the “Multi-Manager Portfolios”).

This Supplement must always be read in conjunction with the Prospectus. The Prospectus contains detailed information on the Fund including: a description of Share Classes; the risks associated with an investment in the Fund; information on the management and administration of the Fund and in respect of those third parties providing services to the Fund; the purchase, redemption and exchange of Shares; the determination of Net Asset Value; dividend policy; fees and expenses of the Fund; general information on the Fund; meetings of and reports to Shareholders; and taxation. In addition, the Prospectus contains in its Appendices, information on derivatives and efficient portfolio management techniques, applicable investment restrictions and overall risk exposure and risk management.

Potential investors are advised to read the Prospectus and this Supplement, as amended from time to time, together with the latest annual and semi-annual report before making an investment decision. The rights and duties of the investor as well as the legal relationship with the Fund are set out in the Prospectus.

This Supplement provides information on each of the Multi-Manager Portfolios including details of the Share Classes within each Multi-Manager Portfolio that are available as of the date of the Prospectus.

A list of the Managers is always available to Shareholders on request or from the registered office of the Fund, and/or the Management Company or at the office of the Investment Adviser. In addition, a list of the Managers will be disclosed in the semi-annual and annual reports of the Fund.

**Before purchasing, redeeming, transferring or exchanging any Shares, the Board of Directors strongly encourages all potential and current Shareholders to seek appropriate professional advice on the legal and taxation requirements of investing in the Fund, together with advice on the suitability and appropriateness of an investment in the Fund or any of its Portfolios. The Fund, its Directors and (unless such duties are separately and expressly assumed by them in writing in respect of investment matters only) the Management Company, the Investment Adviser and other Goldman Sachs entities shall not have any responsibility in respect of these matters. As more particularly described in the Prospectus, certain distributors may be remunerated by Goldman Sachs or the Fund for distributing Shares and any advice received by them should not, in consequence, be assumed to be free of conflict.**

## Definitions

In this Supplement the following capitalised words and phrases will have the meanings set out below. Capitalised words and phrases used but not otherwise defined herein shall have the meaning given to such term in the Prospectus. In the event of a conflict, the meaning in the Supplement shall prevail.

|                                              |                                                                                                                                                                                                               |
|----------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>“Allocated Assets”</b>                    | means the respective proportion of the Multi-Manager Portfolio to be managed by each of the Managers from time to time;                                                                                       |
| <b>“EPM”</b>                                 | means efficient portfolio management;                                                                                                                                                                         |
| <b>“Global Manager Strategies Programme”</b> | means the programme, described in this Supplement, of selecting Managers to manage Multi-Manager Portfolios of the Fund;                                                                                      |
| <b>“Multi-Manager Portfolios”</b>            | means those Portfolios of the Fund which are part of the Global Manager Strategies Programme and which are contemplated by this Supplement;                                                                   |
| <b>“Managers”</b>                            | means those third-party investment managers selected and appointed by the Investment Adviser (or its Affiliates) from time to time to manage the Allocated Assets of the Multi-Manager Portfolios;            |
| <b>“Primarily”</b>                           | means, where referring to a Portfolio’s investment objective or investment policy, at least two thirds of the net assets of that Portfolio unless expressly stated to the contrary in respect of a Portfolio; |
| <b>“Sub-Management Agreement”</b>            | means the discretionary investment management agreement entered into between the Investment Adviser and each of the Managers.                                                                                 |

## 1. Goldman Sachs Funds – Summary Table of Portfolios

| Appendix | Multi-Manager Portfolios                                   | Launch Date |
|----------|------------------------------------------------------------|-------------|
| 1        | Goldman Sachs Multi-Manager Dynamic World Equity Portfolio | March 2006  |

For those Portfolios where no exact launch date has been stated, please contact your usual Goldman Sachs representative or the Management Company to establish whether the Portfolio has been launched since the date of this Prospectus. Investors may request information about the Fund as well as the creation and launching of additional Portfolios and Share Classes at the registered office of the Fund.

## 2. Goldman Sachs Funds - Calculation of Global Exposure and Expected Level of Leverage

Each Portfolio's description includes a table at Paragraph "Calculation of Global Exposure and Expected Level of Leverage", setting out:

1. Market Risk Calculation: this is the methodology that the Management Company has adopted to calculate the Global Exposure to comply with the UCITS Regulations;
2. Limit: this is the limit on Global Exposure that the Portfolio must comply with. These are:
  - a. Relative VaR: VaR is limited to twice the VaR of a reference portfolio;
  - b. Absolute VaR: VaR is limited to 20% of the net asset value of the Portfolio. The calculation of the VaR is conducted on the basis of a one-sided confidence interval of 99%, and a holding period of 20 days;
  - c. Commitment: Global Exposure related to positions on financial derivative instruments may not exceed the total net value of the portfolio.
3. Reference Portfolio/Benchmark: this is to comply with the UCITS Regulations where Relative VaR approach is used and for information purposes only for the other Portfolios. Shareholders should be aware that such Portfolios might not be managed to the reference portfolio/benchmark and that investment returns may deviate materially from the performance of the specified reference portfolio/benchmark. Shareholders should also be aware that the reference benchmark referred to may change over time; and
4. Expected Level of Leverage: the method used for the determination of the expected level of leverage of the Portfolios, using the Relative VaR or Absolute VaR approach for the purpose of calculating their Global Exposure, is derived from expected gross sum of notionals of the financial derivative instruments used for each Portfolio. Shareholders should be aware that a Portfolio's leverage may, from time to time, exceed the range disclosed. The expected level of leverage takes into account the financial derivative instruments entered into by the Portfolio, the reinvestment of collateral received (in cash) in relation to operations of EPM and any use of collateral in the context of any other operations of EPM, e.g. securities lending.

Please refer to Paragraph 1 "Investment Objective" and Paragraph 2 "Investment Policies" of each Portfolio for further information on the relevant Portfolio's strategy and the Synthetic Risk and Reward Indicator (SRRI) in the KIID of the relevant Portfolio for details on the Portfolio's historic risk profile where applicable.

### 3. Goldman Sachs Funds – Goldman Sachs Global Manager Strategies Programme

#### Goldman Sachs Global Manager Strategies Programme

The Goldman Sachs Global Manager Strategies Programme has been established to provide investors with exposure to and the benefit of investment strategies and approaches offered by Managers.

In its role as Investment Adviser to the Fund, GSAMI, in its sole discretion, will select one or more Managers for each Multi-Manager Portfolio. The Investment Adviser shall inform the Luxembourg Supervisory Authority on each occasion that a Manager is appointed to a Multi-Manager Portfolio. The Managers for each Multi-Manager Portfolio will be selected by the Investment Adviser through a multi-step process which seeks to identify one or more Managers who are suitable and qualified to manage the assets of the Multi-Manager Portfolio in accordance with the overall strategy for that Multi-Manager Portfolio, either alone or together. These steps involve: screening the universe of potential managers, taking into account both quantitative information (such as performance data) and qualitative reports (such as an analysis of the stability of the investment team); after identifying a number of potential candidates, a further screening process is conducted (through site visits, questionnaires and other research tools), to seek to ensure that any Managers selected will, when taken together, possess the requisite investment styles and track-records capable of realising a Multi-Manager Portfolio's investment objectives. In assessing a candidate Manager's suitability for a particular Multi-Manager Portfolio a number of factors will be considered, including: the overall organisation of the candidate's business and its market standing and reputation; appropriateness of investment philosophy and processes; stability of the investment team and relevant experience of key individuals; extent of the advisory and research capabilities; integrity of portfolio construction models and risk management operations; and the reliability of its internal systems and compliance controls. The Investment Adviser will negotiate on behalf of the Fund the terms of the Sub-Management Agreements to be entered into with each Manager selected for the Multi-Manager Portfolios and will arrange for the Managers to be compensated.

The Investment Adviser will develop the overall strategy for each Multi-Manager Portfolio, including the establishment of appropriate investment guidelines. Whilst the Managers will be responsible for the day-to-day investment decisions of the Multi-Manager Portfolios, the Investment Adviser shall however be entitled from time to time, in its sole discretion, to retain part of the day-to-day investment decisions and/or delegate their performance to another suitable Goldman Sachs entity, subject to obtaining the Luxembourg Supervisory Authority's prior approval, where needed.

In the event that a Sub-Management Agreement with a Manager is terminated, the Investment Adviser will seek to replace that Manager as soon as is reasonably practicable or, if appropriate, shall allocate the Allocated Assets of the departing Manager to the remaining Managers. The termination and/or replacement of a Manager may require the implementation of appropriate transitional arrangements (including the appointment of a dedicated transition manager) the purpose of which is to ensure the continued compliance with the investment objectives and policies of the relevant Multi-Manager Portfolio. In certain circumstances, whether at launch or following the termination of a Manager a Multi-Manager Portfolio may be managed by a single Manager.

The Managers for each Multi-Manager Portfolio will receive an allocation of the Multi-Manager Portfolio's assets for management. The size of the Allocated Assets will be determined by the Investment Adviser in its sole discretion but the emphasis on any such allocation will always be to maintain and/or enhance compliance with the investment objectives and policies of each such Multi-Manager Portfolio. The Investment Adviser will monitor the Multi-Manager Portfolio's investment activity and the Managers' performance. The Managers are responsible for compliance with all applicable rules and regulations pertaining to their investment activities. Notwithstanding this, the Investment Adviser will be responsible for ensuring compliance of the Multi-Manager Portfolio with the UCITS requirements. The Investment Adviser may supplement, replace or terminate the Managers from time to time and/or reallocate assets of a Multi-Manager Portfolio among the Managers without prior notice to Shareholders in circumstances where the Investment Adviser believes that such action is necessary or desirable.

Each of the Managers appointed to manage the Allocated Assets of the relevant Multi-Manager Portfolio have full discretion to acquire and dispose of securities and otherwise manage the assets in the Multi-Manager Portfolio subject always to the Investment Adviser's responsibility for maintaining the Multi-Manager Portfolio's compliance with the investment objectives and policies and applicable investment restrictions. While each of the Managers' investment management activities (insofar as they are referable to their respective Allocated Assets) may not comply

with the Multi-Manager Portfolio's investment objectives and policies and applicable investment restrictions, it is the blend of the various Managers and the aggregate effect of the Allocated Assets which is intended to achieve this aim (this is not the case, however, where a single Manager is responsible for managing the relevant Multi-Manager Portfolio). The selection of Managers by the Investment Adviser will be done independently for each of the Multi-Manager Portfolios contemplated by the Prospectus and this Supplement. It is also possible that the Managers selected for each Multi-Manager Portfolio may change over time.

A list of the Manager or Managers referable to the Multi-Manager Portfolio in which a Shareholder has invested is always available to Shareholders on request or from the registered office of the Fund and/or the Management Company or at the office of the Investment Adviser. In addition, a list of the Managers will be disclosed in the semi-annual and annual reports of the Fund. This list will be updated in the event that the Investment Adviser determines that it is appropriate to supplement, replace or terminate one or more of the Managers.

Subject to the prior written consent of the Investment Adviser and of the regulatory authorities, the Manager may delegate its functions under a Sub-Management Agreement at its own cost and expense and under its responsibility. In such a case, the delegate will be added to the list of Managers mentioned above.

### **Investment Objectives and Policies**

The Multi-Manager Portfolios are Equity Portfolios. Their specific investment objective and policies is disclosed in each Multi-Manager Portfolio's Appendix.

## Appendix

### 1. Goldman Sachs Multi-Manager Dynamic World Equity Portfolio

#### 1. Investment Objectives

The Goldman Sachs Multi-Manager Dynamic World Equity Portfolio (the “Portfolio”) seeks long-term capital appreciation by investing primarily in equity securities of companies domiciled anywhere in the world that seek to adhere to the Portfolio’s environmental, social and governance (“ESG”) criteria as described below.

#### 2. Investment Policies

The Portfolio will, under normal circumstances, invest at least two thirds of its net assets in equity and/or equity related Transferable Securities and Permitted Funds which provide exposure to companies domiciled anywhere in the world.

Equity and equity related Transferable Securities may include common stock, preferred stock, warrants and other rights to acquire stock, ADRs, EDRs and GDRs.

The Portfolio may also invest up to one third of its net assets in non-equity related Transferable Securities and Permitted Funds.

The Investment Adviser implements a multi-faceted approach to Environmental, Social and Governance (ESG) considerations (“ESG Criteria”) into its fundamental investment process. Further details of the ESG characteristics of the Portfolio can be found in the Portfolio’s relevant Appendix in Supplement V of the Prospectus.

The Portfolio may invest up to 10% of its net assets in Permitted Funds.

The Portfolio may invest in PRC Equity Securities directly (e.g., through the Stock Connect scheme (“Stock Connect”) or the Renminbi qualified foreign institutional investor program (“RQFII Program”)) or indirectly (e.g., through Access Products or Permitted Funds investing in China A-Shares). For further information on Stock Connect, the RQFII Program and the associated risk considerations, please refer to Paragraph 4.2.11 “Investments in China” of the Prospectus.

The Portfolio may also use financial derivative instruments as part of its investment policy or for hedging purposes. These may include, but are not limited to, foreign currency forward contracts, futures and option contracts (on equity securities and markets) and swaps (including equity swaps and total return swaps). For further information on the use of financial derivative instruments and associated risks, please refer to Appendix C - “Derivatives and Efficient Portfolio Management” together with Section 4 “Risk Considerations” in the Prospectus.

The Portfolio may also hold bank deposits at sight, such as cash held in current accounts with a bank accessible at any time. Such holdings may only temporarily exceed 20% of the net assets of the Portfolio under exceptionally unfavourable market conditions. Moreover, cash equivalents such as deposits, Money Market Instruments and money market funds may be used for the purpose of cash management and in case of unfavourable conditions, provided that the Investment Adviser considers this to be in the best interests of the Shareholders.

The managers intend to engage in SFTR techniques on, amongst other things, equity securities, markets and other Permitted Investments in line with the exposures set out below (in each case as a percentage of net asset value).

|                                                        |                                                                                                                                                                                       |                                                                                                                                                                                                                                                     |
|--------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Type of transaction                                    | Under normal circumstances it is generally expected that the principal amount of such transactions would represent a proportion of the Portfolio's net asset value indicated below. * | Under normal circumstances, it is generally expected that the principal amount of the Portfolio's assets that can be subject to the transaction may represent up to a maximum of the proportion of the Portfolio's net asset value indicated below. |
| Total return swaps                                     | 0%                                                                                                                                                                                    | 50%                                                                                                                                                                                                                                                 |
| Repurchase, including reverse repurchase, transactions | 0%                                                                                                                                                                                    | 50%                                                                                                                                                                                                                                                 |
| Securities lending transactions                        | 3%                                                                                                                                                                                    | 15%                                                                                                                                                                                                                                                 |

\*In certain circumstances this proportion may be higher.

### 3. Additional Investment Restrictions

The Portfolio continuously invests at least 51% of its net asset value in equity securities which are listed on a stock exchange or traded on an organized market and which for this purpose are not investments in shares in investment funds. Investments in Real Estate Investment Trusts (REITs) are not eligible equity securities for this purpose.

### 4. Calculation of Global Exposure and Expected Level of Leverage

The table below sets out for this Portfolio the information mentioned in Section 2 "Goldman Sachs Funds – Calculation of Global Exposure and Expected Level of Leverage" of the Supplement.

| Market Risk Calculation | Limit | Reference Portfolio/Benchmark*      | Expected Level of Leverage              |
|-------------------------|-------|-------------------------------------|-----------------------------------------|
|                         |       |                                     | Gross Sum of Notionals (Gross Exposure) |
| Commitment              | 100%  | MSCI World Index (Total Return Net) | N/A                                     |

\*The Portfolio is actively managed and is not designed to track its Reference Portfolio/Benchmark. Therefore the performance of the Portfolio and the Reference Portfolio/Benchmark may deviate.

The Portfolio may offer Share Classes which are denominated in or hedged into currencies other than the Base Currency of the Portfolio. Accordingly, the Reference Portfolio/Benchmark noted above may be denominated in or hedged into the relevant currency of a particular Share Class.

### 5. Principal Risks of the Portfolio

Investing in the Portfolio implies (without limitation) the following risk factors which are listed in the same order than in the Prospectus:

- 4.2 Investment risks
- 4.5 Investment in equity securities
- 4.6 Investment in derivatives
- 4.7 Other investments
- 4.9 Leverage and hedging
- 4.10 Currency risks

The Portfolio may be exposed to sustainability risks from time to time. A sustainability risk is defined in the EU Sustainable Finance Disclosure Regulation as an environmental, social or governance event or condition that could cause an actual or a potential material negative impact on the value of investments. The universe of sustainability events or conditions is very broad, and their relevance, materiality and impact on investments will depend on a number of factors such as the investment strategy pursued by the Portfolio, asset class, asset location and asset sector. Depending on the circumstances, examples of sustainability risks can include physical environmental risks, climate change transition risks, supply chain disruptions, improper labour practices, lack of board diversity and corruption. If they materialise, sustainability risks can reduce the value of underlying investments held within the Portfolio and could have a material impact on the performance and returns of the Portfolio.

The Investment Adviser may integrate sustainability risk considerations within its processes for selecting and overseeing external managers appointed to manage the Portfolio. As part of its initial due diligence and ongoing oversight of these external managers, the Investment Adviser may consider, alongside other relevant factors, external managers' frameworks for identifying and managing relevant sustainability risks and external managers' responses to relevant sustainability events or conditions that have or could have a material negative impact on the part of the Portfolio managed by the relevant external manager. The Investment Adviser may utilise proprietary and/or third-party tools and research to assess and monitor external managers and/or sustainability risks that are relevant to the Portfolio.

Please refer to the relevant paragraphs of Section 4 "Risk Considerations" in the Prospectus which includes further relevant risk considerations.

## 6. Portfolio Share Class Table

The following table sets out the Share Classes of the Portfolio and the relevant fees and expenses. For further details on the Share Classes, please refer to Section 3 "Description of Share Classes" of the Prospectus.

|                  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

| Base Currency:   | USD                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| Additional Note: | <p>Class "I" Shares of the Portfolio are limited to qualifying investors on whose behalf investment in the Portfolio is made by a Goldman Sachs entity pursuant to a contractual agreement concluded between the investor and Goldman Sachs (for further details please see Section 3 "Description of Share Classes" in the Prospectus).</p> <p>Each type of Share Class listed in the table below may also be offered:</p> <p>(i) Denominated in or hedged into the following currencies: USD, EUR, GBP, ISK, JPY, CHF, HKD, SGD, CAD, SEK, NOK, DKK, AUD, NZD, INR, RMB, BRL, PLN and IDR. The Sales Charge, Management Fee, distribution fee and performance fee (in each case, where applicable) for these additional Share Classes are the same as for the relevant Share Class type in the below table. The amount of the investment minimum for these Share Classes in each of the following currencies is the same amount in the relevant currency as the amount quoted for that Share Class type's USD or EUR class in the below table: GBP, CHF, HKD, SGD, CAD, AUD, NZD (e.g., the minimum for the Class I Shares (GBP) class is GBP 5m). In the case of JPY, INR, BRL, RMB, PLN, and IDR, the investment minimum will be equal to the amount quoted for that Share Class type's USD or EUR class multiplied by 100, 40, 2, 6, 3 and 10,000, respectively. In the case of DKK, NOK and SEK, the investment minimum will be equal to the amount quoted for that Share Class type's USD or EUR class multiplied by 6, 7 and 8, respectively. In the case of ISK, the investment minimum will be equal to the amount quoted for that Share Class type's USD or EUR class multiplied by 150.</p> <p>With respect to Currency Hedged Share Classes, there may be distinct types of currency hedged share classes available:</p> <p>(a) Share Classes which seek to hedge the base currency exposure and/or other currencies of the Portfolio to the currency denomination of the Share Class. Such Share Classes will, using a EUR denominated class as an example, be denoted: "(EUR-Hedged)", or</p> <p><i>Note: Shareholders should note that the Share Classes which seek to hedge currency exposure will seek to hedge only the currency exposures in the Portfolio's Reference Benchmark to the Share Class currency. Given the difference between the Reference Benchmark and the Portfolio at any given time, some currency exposures may remain and may be significant. For example, a USD-Hedged Share Class will seek to hedge EUR, GBP, CHF and any other currency exposure of the Reference Benchmark into USD, but there may be residual currency exposures that remain unhedged as a result of the different currency exposures between the Reference Benchmark and the Portfolio at any given time. Investors should be aware that even if a Portfolio attempts such hedging techniques, it is not possible to hedge fully or perfectly and there is no assurance or guarantee that such hedging will be effective (please see Section 4 "Risk Considerations" in the Prospectus).</i></p> <p>(b) Share Classes which seek to only hedge the portfolio return in a given currency (and not the underlying currency exposures) back to the currency denomination of the Share Class. Note that some investors might not regard this as a currency hedged class at all as the currency transactions are not linked to the underlying currency exposures of the portfolio.</p> <p>For example, in the case of a EUR denominated class where the return to be hedged is the return in USD the Investment Adviser will, following a EUR subscription into the class, convert EUR to USD whilst entering into a USD/EUR currency forward transaction with the aim of creating a hedged exposure from USD back to EUR. <b>This means an investor in this Share Class will be exposed to the movement of the underlying portfolio currencies relative to USD rather than being exposed to the underlying portfolio currencies relative to EUR.</b> Such a Share Class is denoted: "(EUR) (Long Global CCY vs. USD)".</p> |

|                       | <p><b>Such a Share Class would only be suitable for an investor who believes that the EUR will appreciate against the USD. If instead the USD appreciates against the EUR the Share Class will return less to the investor than if the investor had just invested in an unhedged class denominated in EUR.</b></p> <p>(ii) As accumulation or distribution classes. Please refer to Section 18 “Dividend Policy” of the Prospectus.</p> |              |                |                                 |                    |

| Class IO Shares       | USD                                                                                                                                                                                                                                                                                                                                                                                                                                     | Nil          | Up to 1.75 %   | Variable                        | On application     |
| Class IXO Shares      | USD                                                                                                                                                                                                                                                                                                                                                                                                                                     | Nil          | Up to 1.75 %   | Variable                        | On application     |

<sup>1</sup>The Portfolio pays transaction costs, including taxes and brokerage commissions, each time it buys and sells securities or instruments and may also pay Borrowing Costs. Shareholders should note that, these costs are not reflected in the Portfolio's operating expenses, but will be reflected in the Portfolio's performance.

## 7. Subscriptions, Redemptions and Exchanges

Subject to the terms outlined in the Prospectus, subscriptions, redemptions and exchanges of Shares of the Portfolio may take place on any Business Day. The cut-off time is 2:00 p.m. Central European time on the same Business Day.

## 2. Goldman Sachs Funds – Specific Risk Considerations and Conflicts of Interest

The Risk Considerations and Conflicts of Interest referred to below are specific to the Multi-Manager Portfolios and are in addition to and not in substitution for those described respectively in Section 4 “Risk Considerations” and in Appendix F – “Potential Conflicts of Interest” described in the Prospectus. The Risk Considerations referred to below must be read in conjunction with those described in the Prospectus.

**Investors should read all Risk Considerations to determine applicability to a specific Multi-Manager Portfolio.**

### **Limitations on Investment Adviser’s Authority**

Although the Investment Adviser generally has the authority to waive or amend the investment objectives, policies, and strategies of each Multi-Manager Portfolio, subject always to the investment restrictions and the contents of the Prospectus, and terminate the Managers of any Multi-Manager Portfolio, the Sub-Management Agreements may impose certain limitations on that authority. Specific limitations may include the following; (a) if any modification to the investment guidelines for a Multi-Manager Portfolio would cause the continued holding of any security or instrument to cease to be consistent with such revised investment guidelines, the Manager may not dispose of any such security or instrument until a reasonable time after such modification; (b) the Investment Adviser may not withdraw securities from a Multi-Manager Portfolio without prior written notice, unless instructed to do so by a Shareholder to effect a redemption of that Shareholder’s interest in the Multi-Manager Portfolio; (c) the Investment Adviser may not withdraw cash from a Multi-Manager Portfolio without prior written notice unless the withdrawal from the Multi-Manager Portfolio is necessary to satisfy a request by a Shareholder to redeem the Shareholder’s interest in the Multi-Manager Portfolio; and (d) the Investment Adviser may have to give prior written notice to terminate the appointment of a Manager, potentially resulting in a delay until the assets under the Manager’s management are liquidated, although the Investment Adviser may generally require the Manager to transfer discretionary authority over the assets of the Multi-Manager Portfolio to another Manager or other third party upon receipt of notice to terminate the Sub-Management Agreement. As a result of these limitations, changes in a Multi-Manager Portfolio’s investment objectives, reallocations of Shareholder assets among Multi-Manager Portfolios, and liquidation of a Multi-Manager Portfolio’s assets are potentially subject to delay, and losses may result during the time it takes the Investment Adviser to react to market or other conditions and comply with the required notice obligations.

### **Reliance on the Investment Adviser and the Managers**

The investment decisions in respect of each Multi-Manager Portfolio will be made by its Managers. The Investment Adviser, the Management Company, the Board of Directors and the Shareholders in a Multi-Manager Portfolio will not make decisions with respect to the purchase, management, disposition, or other realization of the Multi-Manager Portfolio’s investments. Shareholders will not have the opportunity to evaluate the specific investments in which the assets of the Multi-Manager Portfolio will be invested or the terms of any such investment. Furthermore, Shareholders in a Multi-Manager Portfolio will not have the right to remove any or all of the Managers. It is not intended that the Managers will be selected from the Goldman Sachs group or any of its Affiliates. Consequently, Goldman Sachs has no control, directly or indirectly, over the business affairs or market conduct of the Managers. In selecting the Managers, the Investment Adviser has undertaken reasonable investigative and due diligence procedures but is nevertheless reliant on information supplied to it by each of the Managers as well as information in relation to the Managers obtained from independent sources and from the public domain.

### **Other Investment Funds and Proprietary Trading**

Each of the Management Company and the Investment Adviser may be the sponsor and investment manager of other investment funds and may sponsor similar investment funds in the future. Certain investments may be appropriate either for the Multi-Manager Portfolios or for such other funds. A Manager is not under any obligation to share any investment idea or strategy with the Multi-Manager Portfolios. The Multi-Manager Portfolios may also invest in securities that are not followed or recommended by Goldman Sachs.

## Performance of Affiliated Funds

The results of other funds or managed accounts, if any, managed by the Managers are not indicative of the results that the Multi-Manager Portfolios may achieve. Each Multi-Manager Portfolio will make investments in a different portfolio of securities and, accordingly, its results are independent of the previous results obtained by any prior investment vehicles sponsored and/or managed by Goldman Sachs or the Managers. Further, each Multi-Manager Portfolio and its method of operation may differ in several respects from other investment vehicles sponsored and/or managed by Goldman Sachs and/or managed by the Managers.

## Conflicts of Interest

Each of the Management Company and the Investment Adviser may have a conflict of interest in selecting itself or its Affiliates as a Manager for a Multi-Manager Portfolio. Further, the Management Company, the Investment Adviser, Goldman Sachs & Co. and their Affiliates and their directors, officers and employees, including those involved in the investment activities and business operations of the Multi-Manager Portfolios (collectively, for the purposes of this Section, "Goldman Sachs"), and the Managers retained to invest the assets of the Multi-Manager Portfolios, are engaged in business unrelated to the Multi-Manager Portfolios. In addition, certain principals and certain of the employees of the Management Company and the Investment Adviser are also principals or employees of Goldman Sachs entities.

Goldman Sachs is a major participant in the global currency, equity, commodity, fixed income and other markets in which the Multi-Manager Portfolios trade. As such, Goldman Sachs is actively engaged in transactions in the same securities and other instruments in which the Multi-Manager Portfolios invest. The Managers may likewise be engaged in such transactions. Subject to applicable law, Goldman Sachs and the Managers may purchase or sell the securities of, or otherwise invest in or finance, issuers in which the Multi-Manager Portfolios have an interest. Goldman Sachs and the Managers also have proprietary interests in, and manage and advise, other accounts or investment funds that have investment objectives similar or dissimilar to those of the Multi-Manager Portfolios and/or which engage in transactions in the same types of securities and instruments as the Multi-Manager Portfolios. Goldman Sachs and the Managers are not under any obligation to share any investment opportunity, idea or strategy with the Multi-Manager Portfolios. As a result, Goldman Sachs and the Managers may compete with the Multi-Manager Portfolios for appropriate investment opportunities. If both the Multi-Manager Portfolios and other accounts or funds managed by the Managers invest in securities of the same issuer, the allocation between such investors may present certain conflicts.

The proprietary activities or portfolio strategies of Goldman Sachs and the Managers, or the activities or strategies used for accounts managed by Goldman Sachs or the Managers, could conflict with the transactions and strategies employed by the Managers in managing the Multi-Manager Portfolios and affect the prices and availability of the securities and instruments in which the Multi-Manager Portfolios invest. Such transactions may be executed independently of the Multi-Manager Portfolios' transactions, and thus at prices or rates that may be more or less favourable. Issuers of the securities held by the Multi-Manager Portfolios may have publicly or privately traded securities in which Goldman Sachs or the Managers are investors or make a market. Goldman Sachs' trading activities generally are carried out, and the trading activities of the Managers may be carried out, without reference to positions held by the Multi-Manager Portfolios and may have an effect on the value of the positions so held, or may result in Goldman Sachs or the Managers having an interest in the issuers adverse to that of the Multi-Manager Portfolios. In addition, such activities may limit investment opportunities in certain emerging markets and regulated industries in which limitations are imposed upon the aggregate amount of investment by affiliated investors.

Goldman Sachs and the Managers may create, write or issue derivative instruments with respect to which the underlying securities or instruments may be those in which the Multi-Manager Portfolios invest. Goldman Sachs and the Managers may keep any profits, commissions and fees accruing to them in connection with their activities for themselves and other clients, and Goldman Sachs' fees to the investor whose assets are invested in the Multi-Manager Portfolios will not be reduced thereby.

The Sub-Management Agreements provide for differing rates of remuneration for the Managers, often referable to the Allocated Assets. The Investment Adviser is responsible for agreeing the appropriate level of fees with each of the Managers and for determining the Allocated Assets referable to each Manager. The Investment Adviser is entitled to an annual Management Fee which operates on the basis of a range and a maximum threshold, and the Investment Adviser is required to pay the Managers from the annual Management Fee which it receives. Consequently, investors

should note, while the Investment Adviser is not obliged to vary its annual Management Fee by reference to the aggregate levels of the remuneration payable to the Managers, that the aggregate levels of such fees may be a factor in its decision to vary its annual Management Fee within the stated range. Further, investors should note, while any decision by the Investment Adviser to reset the respective Allocated Assets of a Multi-Manager Portfolio between the Managers may result in a change in the aggregate level of fees which the Investment Adviser is required to pay to the Managers, that the Investment Adviser shall not be under an obligation to alter the rate of its annual Management Fee. Investors should be aware that a conflict of interest may exist, therefore, in the selection of the Managers and the way in which the Allocated Assets are apportioned between the Managers, as such decisions may vary the remuneration received by the Investment Adviser.

The results of the Multi-Manager Portfolios' investment activities may differ significantly from the results achieved (i) by other Portfolios within the Fund (ii) by Goldman Sachs for its proprietary accounts or accounts managed by it, and (iii) by the Managers for their advised accounts (including investment companies and collective investment vehicles). The Multi-Manager Portfolios' investment programme may be similar to those of investment funds and separately managed accounts managed by Goldman Sachs or the Managers in the future. While certain investment opportunities may be appropriate for the Multi-Manager Portfolios as well as such other accounts, and many of the securities position for the Multi-Manager Portfolio and such other accounts may from time to time overlap, the portfolios of such accounts will differ due to, among other things, differences in risk tolerance, investment techniques, investment restrictions (whether or not due to applicable legal and regulatory restrictions), liquidity requirements and liquidity of a particular investment, cash available for investment and the timing of contributions and withdrawals or redemptions from such accounts. Further, Goldman Sachs, the Managers, and certain of their employees (including employees of the Managers with portfolio management responsibility for the Multi-Manager Portfolios) may directly purchase securities that are the same as or related to those held by the Multi-Manager Portfolios. Employees of the Managers with portfolio management responsibility for the Multi-Manager Portfolios may also serve in similar capacities with respect to other investment funds and separate accounts utilising an investment programme similar to or different from that of the Multi-Manager Portfolios.

From time to time, the Multi-Manager Portfolios' activities may be restricted because of regulatory requirements applicable to Goldman Sachs or the Managers, or their respective internal policies designed to comply with or limit the applicability of such requirements. For example, there may be periods when the Manager will not initiate or recommend certain types of transactions in certain securities or instruments for which it or an affiliate is performing investment banking or other services, making a market in certain securities or when position limits have been reached. Similar situations could arise if personnel of a Manager serve as directors of companies, the securities of which a Multi-Manager Portfolio managed by that Manager wishes to purchase or sell.

The Manager may cause the Multi-Manager Portfolios to enter into transactions and invest in securities or other instruments on behalf of the Multi-Manager Portfolios in which Goldman Sachs, acting as principal or on a proprietary basis for its customer, serves as the counterparty to the extent permissible under applicable law. The Managers also may cause the Multi-Manager Portfolios to allocate a portion of the brokerage transactions of the Multi-Manager Portfolios to Goldman Sachs, or broker-dealers affiliated with the Manager, and for which Goldman Sachs or the affiliated broker-dealers will receive compensation.

To the extent permitted by applicable law, the Multi-Manager Portfolios also may invest in securities of companies in which Goldman Sachs or a Manager has an equity or other participation interest. The purchase, holding and sale of such investments by the Multi-Manager Portfolios may enhance the profitability of Goldman Sachs' or the Manager's own investments in such companies. The Multi-Manager Portfolios also may invest in securities issued by Goldman Sachs. The Managers, and their Affiliates and personnel, may engage in the same breadth of activities as Goldman Sachs, and therefore such Managers are subject to the same potential conflicts to which Goldman Sachs is subject and as described in the Prospectus and this Supplement. Among these potential conflicts, the Managers may engage Goldman Sachs to provide services, such as prime brokerage, execution, administration, financing and transaction and advisory services in respect of the Managers and other accounts or activities of the Managers, their Affiliates or personnel, creating potential conflicts, including without limitation the potential conflicts described above relating to the receipt of fees. The Managers to a Multi-Manager Portfolio have fiduciary responsibilities with respect to that Multi-Manager Portfolio and will make all investment decisions in a manner which is consistent with those responsibilities. Future activities of Goldman Sachs, the Management Company, the Investment Adviser, the Managers and/or their Affiliates may give rise to additional conflicts of interest.

Supplement IV to the Prospectus  
- Alternative Portfolios

## This Supplement

The purpose of this Supplement is to describe in more detail those Alternative Portfolios of the Fund.

This Supplement must always be read in conjunction with the Prospectus. The Prospectus contains detailed information on the Fund including: a description of Share Classes; the risks associated with an investment in the Fund; information on the management and administration of the Fund and in respect of those third parties providing services to the Fund; the purchase, redemption and exchange of Shares; the determination of net asset value; dividend policy; fees and expenses of the Fund; general information on the Fund; meetings of and reports to Shareholders; and taxation. In addition, the Prospectus contains, in its Appendices, information on derivatives and efficient portfolio management techniques and applicable investment restrictions and overall risk exposure and risk management.

Potential investors are advised to read the Prospectus and this Supplement, as amended from time to time, together with the latest annual and semi-annual report before making an investment decision. The rights and duties of the investor as well as the legal relationship with the Fund are set out in the Prospectus.

**Before purchasing, redeeming, transferring or exchanging any Shares, the Board of Directors strongly encourages all potential and current Shareholders to seek appropriate professional advice on the legal and taxation requirements of investing in the Fund, together with advice on the suitability and appropriateness of an investment in the Fund or any of its Portfolios. The Fund, its Directors and (unless such duties are separately and expressly assumed by them in writing in respect of investment matters only) the Management Company, the Investment Adviser, the Sub-Advisers and other Goldman Sachs entities shall not have any responsibility in respect of these matters. As more particularly described in the Prospectus, certain distributors may be remunerated by Goldman Sachs or the Fund for distributing Shares and any advice received by them should not, in consequence, be assumed to be free of conflict.**

## Definitions

In this Supplement, the following capitalised words and phrases will have the meanings set out below. Capitalised words and phrases used but not otherwise defined herein shall have the meaning given to such term in the Prospectus. In the event of a conflict the meaning in the Supplement shall prevail.

|                                          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>"Algorithm"</b>                       | means a proprietary algorithm which operates in accordance with a set of predetermined trading rules, to determine when and how much of each Portfolio's assets is allocated to each Factor, market, sector, Sub-Strategy or asset class, as applicable, and including the rebalancing thereof;                                                                                                                                                                     |
| <b>"Equity Long Short Strategy(ies)"</b> | means strategy(ies) which typically seeks to hold long exposure in equities that are expected to increase in value and short exposure in equities that are expected to decrease in value;                                                                                                                                                                                                                                                                           |
| <b>"Factor(s)"</b>                       | means core factor exposure(s) of hedge funds as a broad asset class or a portfolio (or basket) of investment funds that employ Sub-Strategies relevant to a Portfolio, as determined by the Investment Adviser;                                                                                                                                                                                                                                                     |
| <b>"Global Macro Strategy(ies)"</b>      | means strategy(ies) which typically seeks to utilise analysis of macroeconomic and financial conditions to develop views on country, regional, or broader economic themes and then seeks to capitalize on such views by trading in securities, commodities, interest rates, currencies, and other instruments;                                                                                                                                                      |
| <b>"Trend Strategy(ies)"</b>             | means strategy(ies) which typically seeks to generate profit from upward and downward movements in various markets by taking long or short positions in respect of the markets based on the directional trends in such markets;                                                                                                                                                                                                                                     |
| <b>"Relative Value Strategy(ies)"</b>    | means strategy(ies) which typically measures the value of an asset based on its attractiveness, in terms of risk, liquidity, and returns, relative to other assets (rather than measuring an asset's intrinsic value). As part of the investment programs, Relative Value Strategy(ies) may, among other things, seek to capitalise on the mispricing between an issuer's convertible bonds and its underlying stock (a "convertible bond arbitrage strategy"); and |
| <b>"Sub-Strategy(ies)"</b>               | means strategies which may be employed by hedge funds as a broad asset class, including but not limited to one or more of the following: Equity Long Short Strategy, Global Macro Strategy, Trend Strategy and Relative Value Strategy.                                                                                                                                                                                                                             |

## 1. Goldman Sachs Funds – Summary Tables of the Portfolios

| Appendix | Alternative Portfolios                          | Launch Date  |
|----------|-------------------------------------------------|--------------|
| 1.       | Goldman Sachs Absolute Return Tracker Portfolio | January 2015 |
| 2.       | Goldman Sachs Alternative Trend Portfolio       | January 2015 |

For those Portfolios where no exact launch date has been stated, please contact your usual Goldman Sachs representative or the Management Company to establish whether the Portfolio has been launched since the date of this Prospectus. Shareholders may request information about the Fund as well as the creation of additional Share Classes at the registered office of the Fund.

## 2. Goldman Sachs Funds – Minimum Investment Amount Table

Each Portfolio's description includes a table setting out the Share Classes for that Portfolio. For further details on the Share Classes, please refer to Section 3 "Description of Share Classes" of the Prospectus.

\*The amounts listed are in the relevant currency.

The minimum investment amount for Class IO Shares, and Class IXO Shares will be provided upon application.

### 3. Goldman Sachs Funds - Calculation of Global Exposure and Expected Level of Leverage

Each Portfolio's description includes a table "Calculation of Global Exposure and Expected Level of Leverage", setting out:

1. Market Risk Calculation: this is the methodology that the Management Company has adopted to calculate the Global Exposure to comply with the UCITS Regulations;
2. Limit: this is the limit on Global Exposure that the Portfolio must comply with. These are:
  - a. Relative VaR: VaR is limited to twice the VaR of a reference portfolio;
  - b. Absolute VaR: VaR is limited to 20% of the net asset value of the Portfolio. The calculation of the VaR is conducted on the basis of a one-sided confidence interval of 99%, and a holding period of 20 days;
  - c. Commitment: Global Exposure related to positions on financial derivative instruments may not exceed the total net value of the portfolio.
3. Reference Portfolio/Benchmark: this is to comply with the UCITS Regulations where Relative VaR approach is used and for information purposes only for the other Portfolios. Shareholders should be aware that such Portfolios might not be managed to the reference portfolio/benchmark and that investment returns may deviate materially from the performance of the specified reference portfolio/benchmark. Shareholders should also be aware that the reference benchmark referred to may change over time; and
4. Expected Level of Leverage: The method used for the determination of the expected level of leverage of the Portfolios, using the Relative VaR or Absolute VaR approach for the purpose of calculating their Global Exposure, is derived from expected gross sum of notionals of the financial derivative instruments used for each Portfolio. Shareholders should be aware that a Portfolio's leverage may, from time to time, exceed the range disclosed. The expected level of leverage takes into account the financial derivative instruments entered into by the Portfolio, the reinvestment of collateral received (in cash) in relation to operations of EPM and any use of collateral in the context of any other operations of EPM, e.g. securities lending.

Shareholders should note that leverage resulting from the use of financial derivative instruments may result in magnified losses. However, the expected level of leverage disclosed at the table "Calculation of Global Exposure and Expected Level of Leverage" in each Appendix does not necessarily provide an appropriate illustration of the overall risk profile of the Portfolio as financial derivative instruments are used to manage risk as well as to seek return. This is largely due to the fact that the gross sum of notionals exposure calculation simply aggregates the absolute sum of all long and short financial derivative instrument positions, even if the financial derivative instruments are for hedging or offsetting purposes. Further the gross sum of notionals exposure calculation uses just notional values rather than measures that calculate the overall contributions to risk which will often explain why the leverage levels under this method appear high. By way of illustration, to achieve a desired level of investment risk in interest rate markets, the amount of gross leverage used to achieve this risk will vary significantly depending on the underlying market risk (or 'duration') of the instrument chosen to implement this investment decision. For example, using an instrument with less duration risk - such as a shorter maturity interest rate derivative - requires more leverage to achieve the higher amount of required notional market exposure, compared to using a longer maturity instrument with higher duration risk. In this example, a 2 year maturity interest rate derivative would require approximately 4 times as much notional exposure compared to using a 10 year maturity instrument. Shareholders should note that the actual leverage levels may vary and deviate from this range significantly and further details on the average leverage levels, as calculated using the gross sum of notionals exposures, will be disclosed in the Fund's annual financial statements for the relevant accounting period.

As further detailed in Paragraph 2 "Investment Policy" of each Appendix for the relevant Portfolios and also in Appendix C - "Derivatives and Efficient Portfolio Management Techniques" of the Prospectus, Portfolios may use financial derivative instruments for hedging purposes, in order to manage risk relating to a Portfolio's investments and/or to establish speculative positions. The Investment Adviser may use a wide range of strategies with financial derivative instruments which, depending on the Portfolio, may be similar but not necessarily identical and may be

used in varying amounts to generate returns and/or manage risk. Such strategies may mainly include, but are not limited to:

1. interest rate swaps and futures are often used to manage or hedge interest rate risk and yield curve exposure, implement relative value positions, or establish speculative views;
2. forward currency contracts are often used to hedge currency exposures or establish active foreign exchange views;
3. total return swaps are often used to hedge certain exposure, to gain synthetic exposure to certain markets or to implement long and short views on certain issuers or sectors in various asset classes;
4. credit default swaps are often used to hedge certain sector or individual issuers exposures and risks or establish speculative views.

When used to calculate leverage implied by the use of such financial derivative instruments, the gross sum of notional exposure can result in high levels even where the net exposure in the relevant Portfolio could actually be reduced, as demonstrated below.

1. **Interest rate swaps and futures:** the gross sum of notional exposure calculation can result in high levels for interest rate strategies despite the overall net duration impact not necessarily being that high depending on the nature of the strategy the Investment Adviser is pursuing. For instance, if one was to employ 90-day Eurodollar interest rate futures to reduce the interest rate risk of a portfolio of bonds, for instance by reducing the duration profile of a Portfolio by one year, in notional exposure terms that could equate to approximately 400% leverage despite the overall risk profile of the Portfolio having been reduced as it relates to interest rate risk.
2. **Forward currency contracts:** in cases where forward currency contracts are used to establish speculative views on currencies or for hedging purposes and the Investment Adviser wishes to remove such exposures due to a change in view or Shareholder redemptions, the inability or inefficiencies that may arise in cancelling such transactions may require such exposures to be offset by equal and opposite transactions, which can lead to high levels of leverage when using the gross method of calculation despite the net exposure being reduced.
3. **Total return swaps:** total return swaps involve the exchange of payments based on set rate, either fixed or floating, with the right to receive the total return, coupons plus capital gains or losses, of a specified reference asset, index or basket of assets. The value of a total return swap may change as a result of fluctuations in the underlying investment exposure. The gross sum of notional exposure calculation can suggest levels of leverage even where the market exposure has sought to be achieved more efficiently than a physical position. For instance, if one was to employ a total return swap to gain exposure to an Emerging Market rather than buy securities issued in such market, when using the gross sum of notional exposure to calculate leverage it would indicate a level of leverage whilst the alternative of buying the physical securities for the equivalent exposure would not.
4. **Credit default swaps:** the gross sum of notional exposure calculation can suggest levels of leverage even in cases where credit risk has sought to be reduced. For instance, if one was to employ an index credit default swap in order to reduce the credit risk of a portfolio of bonds, when using the gross sum of notional exposure to calculate leverage it would indicate a level of leverage despite the overall risk profile of the Portfolio having been reduced as it relates to credit risk.

Please refer to Appendix C - "Derivatives and Efficient Portfolio Management Techniques" together with Section 4 "Risk Considerations" (in particular Paragraph 4.6 "Investment in derivatives") in the Prospectus for further information on the use of financial derivative instruments, their purposes and some of the risk considerations associated with them.

Please refer to Paragraph 1 "Investment Objective" and Paragraph 2 "Investment Policy" of each Portfolio for further information on the relevant Portfolio's strategy and the Synthetic Risk and Reward Indicator (SRRI) in the KIID of the relevant Portfolio for details on the Portfolio's historic risk profile where applicable.

## Appendix

### 1. Goldman Sachs Absolute Return Tracker Portfolio

#### 1. Investment Objective

The investment objective of the Portfolio is to implement a trading strategy that seeks to approximate the return pattern characteristic of hedge funds as a broad asset class. Returns of hedge funds can be viewed as being composed of both "beta" (or varying market exposures) and "alpha" (or manager skill). The Portfolio seeks to approximate this beta component in a relatively liquid, transparent, and cost efficient manner. Absolute returns are not guaranteed.

#### 2. Investment Policy

The Investment Adviser will seek to achieve the investment objective of the Portfolio by making investments principally in the underlying assets comprised in the Factors, as described below (i) directly, by investing in Transferable Securities and/or other Permitted Investments, and/or (ii) indirectly, by using various techniques and instruments, such as financial derivative instruments and one or several reverse repurchase agreement(s). Such exposures, through the use of financial derivative instruments, may relate to, amongst other things, equities, fixed income, credit, currency and commodities, may result in significant leverage. At any time, the Investment Adviser may determine in its sole discretion which of the abovementioned forms of investment, or any combination thereof, is the most appropriate to achieve the investment objective of the Portfolio. The Portfolio may invest in commodities indirectly via eligible financial indices.

The Portfolio may also hold bank deposits at sight, such as cash held in current accounts with a bank accessible at any time. Such holdings may only temporarily exceed 20% of the net assets of the Portfolio under exceptionally unfavourable market conditions. Moreover, cash equivalents such as deposits, Money Market Instruments and money market funds may be used for the purpose of cash management and in case of unfavourable conditions, provided that the Investment Adviser considers this to be in the best interests of the Shareholders.

The Portfolio may invest up to 10% of its net assets in Permitted Funds.

The Investment Adviser in particular may use certain techniques, through the use of financial derivative instruments which may result in both net long and net short exposures in, amongst other things, interest rates, credit and currencies, and other Permitted Investments as part of the Portfolio's general investment policy, to generate returns and/or for hedging purposes. Furthermore, the Portfolio may engage in financial derivative transactions including, but not limited to, swaps, futures contracts, options, reverse repurchase agreements, and other transactions involving currency and interest rate hedging, security hedging or other strategies to manage risk relating to the Portfolio's investments, to leverage the Portfolio and to establish speculative positions.

Please also refer to Appendix C "Derivatives and Efficient Portfolio Management Techniques" together with Section 4 "Risk Considerations" in the Prospectus (and in particular Paragraph 4.6 "Investment in derivatives") for further information on the use of financial derivative instruments, their purposes and some of the risk considerations associated with them.

#### Overview of the Investment Process

In seeking to replicate the returns of hedge funds as a broad asset class, the Portfolio will not invest in hedge funds or hedge fund indices. Instead, the Investment Adviser generally expects to use statistical analysis of historical performance data in respect of such funds, along with public market information obtained from hedge fund databases, regulatory filings and other sources, to identify relevant Factors for such funds as a broad asset class. The investment strategy of the Portfolio reflects the theory that returns of hedge funds are driven to a large extent by exposure to common factors.

Factors may include equities, commodities, fixed income, foreign exchange and credit (Investment Grade and high yield). The Investment Adviser may remove or add new Factors from time to time in its sole discretion.

The Investment Adviser expects to utilise an Algorithm to implement the investment strategy of this Portfolio. The Algorithm provides a signalling framework based on defined market indicators. Such market indicators involve a set of defined parameters of indicators in relation to given strategies/assets that are used to characterise the market environment.

The Investment Adviser generally expects to make investment decisions that are consistent with the Algorithm. While the Investment Adviser has discretion to deviate from the Algorithm, it expects to do so only in exceptional circumstances. In addition, the Investment Adviser will have discretion to determine the manner in which to implement the Algorithm's recommendations. The Investment Adviser expects periodically to review the Algorithm, including without limitation, the rules and assumptions on which the Algorithm is based, and may modify the Algorithm at any time and from time to time in its sole discretion without notice to investors.

Certain areas of the Goldman Sachs Group, Inc. and its affiliates (together "Goldman Sachs"), including Goldman Sachs' trading and prime brokerage businesses, may have access to fund-specific and position-level information relating to one or more hedge funds or investment funds. Any such information will not be available to the Investment Adviser for use with the Algorithm.

Changes in market conditions can be sudden and could materially adversely affect the performance of the Portfolio. The percentage of the Portfolio's assets allocated to a Factor will be determined by the Algorithm, based on various considerations, which may include the amount of the Portfolio's assets under management and the trading signals from the Algorithm. Greater concentration in any Factor, may entail additional risks. Please see Section 5 "Specific Risk Considerations and Conflicts of Interest" (and in particular paragraph "Portfolio concentration") of the Supplement.

The success of the Portfolio's investment strategy is dependent on certain underlying assumptions, including that the Algorithm correctly identifies Factors and correctly determines the size and timing of the Portfolio's investment in each Factor. Please see Section 5 "Specific Risk Considerations and Conflicts of Interest" (and in particular paragraphs "Reliance on Algorithms" and "Risks associated with particular strategies and investment techniques") of the Supplement.

The Portfolio's historical tracking error and excess return figures can be found in the Monthly Fund Updates at [www.gsam.com](http://www.gsam.com).

**The Portfolio's investment programme is speculative and entails substantial risks. There can be no assurance that the investment objective of the Portfolio will be achieved or that the investment strategy will be successful, and results may vary substantially over time. The Portfolio's investment programme may be highly concentrated from time to time in that the Portfolio may invest substantially all of its assets in a limited number of Factors. There is no assurance that the various steps employed in the investment process of the Portfolio will be successful, that the models and techniques utilised therein will be implemented successfully or that they are adequate for their intended uses, or that the discretionary element of the investment process of the Portfolio will be exercised in a manner that is successful or that is not adverse to each respective Portfolio.**

In relation to Article 7 of SFDR, which requires disclosure of how principal adverse impacts are considered at Portfolio level, the Investment Manager notes that there are still a number of uncertainties regarding this obligation, in particular due to the absence of centralised implementing standards, local guidance or established market practice. The Investment Manager does not currently take principal adverse impacts on sustainability factors into account in respect of the Portfolio, but will keep its approach in this area for the Portfolio under review.

As per Article 7 of the Taxonomy Regulation, Shareholders should note that investments underlying the Portfolios do not take into account the EU criteria for environmentally sustainable economic activities.

The Investment Adviser intends to engage in SFTR techniques on, amongst other things, equity securities, markets, interest rates, credit, currencies, commodity indices and other Permitted Investments in line with the exposures set out below (in each case as a percentage of net asset value).

|                                                        |                                                                                                                                                                                      |                                                                                                                                                                                                                                                     |
|--------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Type of transaction                                    | Under normal circumstances it is generally expected that the principal amount of such transactions would represent a proportion of the Portfolio's net asset value indicated below.* | Under normal circumstances, it is generally expected that the principal amount of the Portfolio's assets that can be subject to the transaction may represent up to a maximum of the proportion of the Portfolio's net asset value indicated below. |
| Total return swaps                                     | 29%                                                                                                                                                                                  | 50%                                                                                                                                                                                                                                                 |
| Repurchase, including reverse repurchase, transactions | 0%                                                                                                                                                                                   | 50%                                                                                                                                                                                                                                                 |
| Securities lending transactions                        | 0%                                                                                                                                                                                   | 15%                                                                                                                                                                                                                                                 |

\*In certain circumstances this proportion may be higher.

### 3. Calculation of Global Exposure and Expected Level of Leverage

The Table below sets out for this Portfolio the information mentioned in Section 3 "Goldman Sachs Funds – Calculation of Global Exposure and Expected Level of Leverage" of the Supplement.

| Market Risk Calculation | Limit | Reference Portfolio/Benchmark* | Expected Level of Leverage                 |
|-------------------------|-------|--------------------------------|--------------------------------------------|
|                         |       |                                | Gross Sum of Notionals<br>(Gross Exposure) |
| Absolute VaR            | 20%   | ICE BofA 3 month US T-Bill *   | 0%-200%**                                  |

\*For performance reporting purposes, the Portfolio will use the ICE BofA 3 month US T-Bill as a reference benchmark. The Portfolio is actively managed and is not designed to track its Reference Portfolio/Benchmark. Therefore the performance of the Portfolio and the Reference Portfolio/Benchmark may deviate.

The Portfolio may offer Share Classes which are denominated in or hedged into currencies other than the Base Currency of the Portfolio. Accordingly, the Reference Portfolio/Benchmark noted above may be denominated in or hedged into the relevant currency of a particular Share Class.

\*\*This expected range of leverage is not a limit and may vary over time particularly as described below. The actual levels may deviate from the stated range.

Given that the Portfolio's investment policy is implemented through the use of financial derivative instruments, the expected level of leverage calculated under the gross sum of notionals exposures, may be relatively high. It also means that the expected level of leverage may exceed the stated range, particularly as a result of effecting certain investment exposures and also as a result of investor redemptions that can result in offsetting financial derivative instruments trades being placed which whilst they reduce investment exposure can increase leverage based on the gross sum of notionals calculation.

Shareholders should note that leverage resulting from the use of financial derivative instruments may result in magnified losses. However, the "Expected Level of Leverage" using the gross sum of notionals in the table above does not necessarily provide an appropriate illustration of the overall risk profile of the Portfolio as financial derivative instruments are used to manage risk as well as to seek return. This is largely due to the fact that the gross sum of notional exposure simply aggregates the absolute sum of all long and short financial derivative instrument positions, even if the financial derivative instruments are for hedging or offsetting purposes. Further the gross sum of notionals calculation uses just notional values rather than measures that calculate the overall contributions to risk which will often explain why the leverage levels under this method appear high. By way of illustration, to achieve a desired level of investment risk in interest rate markets, the amount of gross leverage used to achieve this risk will vary significantly depending on the underlying market risk (or 'duration') of the instrument chosen to implement this investment decision. For example, using an instrument with less duration risk - such as a shorter maturity interest rate derivative - requires more leverage to achieve the higher amount of required notional market exposure, compared to using a longer maturity instrument with higher duration risk. In this example, a 2 year maturity interest rate derivative would require approximately 4 times as much notional exposure compared to using a 10 year maturity instrument.

Please refer to Paragraph 1 "Investment Objective" and Paragraph 2 "Investment Policy" of this Appendix for further information on the relevant Portfolio's strategy and the Synthetic Risk and Reward Indicator (SRRI) in the KIID of the Portfolio for details on such Portfolio's historic risk profile where applicable. Further details on the average leverage levels, as calculated using the gross sum of notionals exposures, will be disclosed in the Fund's annual financial statements for the relevant accounting period.

#### 4. Principal risks of the Portfolio

The Portfolio may be exposed to sustainability risks from time to time. A sustainability risk is defined in the EU Sustainable Finance Disclosure Regulation as an environmental, social or governance event or condition that could cause an actual or a potential material negative impact on the value of investments. The universe of sustainability events or conditions is very broad, and their relevance, materiality and impact on investments will depend on a number of factors such as the investment strategy pursued by the Portfolio, asset class, asset location and asset sector. Depending on the circumstances, examples of sustainability risks can include physical environmental risks, climate change transition risks, supply chain disruptions, improper labour practices, lack of board diversity and corruption. If they materialise, sustainability risks can reduce the value of underlying investments held within the Portfolio and could have a material impact on the performance and returns of the Portfolio.

The Investment Adviser does not specifically consider sustainability risks in its investment decision making.

#### 5. Portfolio Share Class Table

The following table sets out the different Share Classes of this Portfolio and the relevant fees and expenses. For further details on the Share Classes, please refer to Section 3 "Description of Share Classes" of the Prospectus.

| Base Currency:        | USD                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |              |                                               |                |                  |                                 |
|-----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|-----------------------------------------------|----------------|------------------|---------------------------------|
| Additional Notes:     | <p>Each type of Share Class listed in the table below may also be offered:</p> <p>Denominated in or hedged into other currencies. For a list of available currencies and minimum investment amounts, please refer to Section 2 "Goldman Sachs Funds – Minimum Investment Amount Table" of the Supplement. The Sales Charge, contingent deferred sales charge, Management Fee, distribution fee, and operating expenses (in each case, where applicable) for these additional Share Classes are the same as for the relevant Share Class type in the below table.</p> <p>As accumulation or distribution classes. Please refer to Section 18 "Dividend Policy" of the Prospectus.</p> <p>As "Snap" Shares and "Close" Shares. Please refer to Section 7 "Subscriptions, Redemptions and Exchanges" of this Portfolio and Section 17 "Determination of the Net Asset Value" of the Prospectus for further information.</p> |              |                                               |                |                  |                                 |
| Share Class           | Share Class Currency                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Sales Charge | Contingent Deferred Sales Charge <sup>1</sup> | Management Fee | Distribution Fee | Operating Expenses <sup>2</sup> |

<sup>1</sup> A contingent deferred sales charge is imposed on Class C Shares. Please refer to Section 3 "Description of Share Classes" of the Prospectus for further information.

<sup>2</sup> The Portfolio pays transaction costs, including taxes and brokerage commissions, each time it buys and sells securities or instruments and may also pay Borrowing Costs. Shareholders should note that, these costs are not reflected in the Portfolio's operating expenses, but will be reflected in the Portfolio's performance.

## 6. Subscriptions, Redemptions and Exchanges

Subject to the terms outlined in the Prospectus, subscriptions, redemptions and exchanges of Shares of the Portfolio may take place on any Business Day. The cut-off time is 2:00 p.m. Central European time on the same Business Day.

The following table illustrates the differences between Snap Shares and Close Shares of the Portfolio, with respect to the receipt of a subscription or redemption order by the Distributor, the Registrar and Transfer Agent, the Management Company or the Fund on any Business Day. The table refers to 1st February as an example date (assuming that each of the 1st February and the other dates mentioned below falls on a Business Day). For this Portfolio, the net asset value per Share of a Close Share is expected to differ from the equivalent Snap Share as a result of:

- The application of different valuation points on the same Business Days; and
- The use of adjusted prices (for the Snap Share).

## 2. Goldman Sachs Alternative Trend Portfolio

### 1. Investment Objective

The investment objective of the Portfolio is to seek returns from persistent price trends in multiple asset classes and markets. The Portfolio aims to systematically measure the direction and strength of price trends and invest short, via financial derivatives only, or long, accordingly.

### 2. Investment Policy

The Investment Adviser will seek to achieve the investment objective of the Portfolio by making investments principally in the underlying assets comprised in the markets or sectors, as described below (i) directly, by investing in Transferable Securities and/or other Permitted Investments, and/or (ii) indirectly, by using various techniques and instruments, such as financial derivative instruments and one or several reverse repurchase agreement(s). Such exposures, through the use of financial derivative instruments, may relate to, amongst other things, equities, fixed income, credit, currency and commodities, may result in significant leverage. At any time, the Investment Adviser may determine in its sole discretion which of the abovementioned forms of investment, or any combination thereof, is the most appropriate to achieve the investment objective of the Portfolio. The Portfolio may invest in commodities indirectly via eligible financial indices.

The Portfolio may also hold bank deposits at sight, such as cash held in current accounts with a bank accessible at any time. Such holdings may only temporarily exceed 20% of the net assets of the Portfolio under exceptionally unfavourable market conditions. Moreover, cash equivalents such as deposits, Money Market Instruments and money market funds may be used for the purpose of cash management and in case of unfavourable conditions, provided that the Investment Adviser considers this to be in the best interests of the Shareholders.

The Portfolio may invest up to 10% of its net assets in Permitted Funds.

The Investment Adviser in particular may use certain techniques, through the use of financial derivative instruments which may result in both net long and net short exposures in, amongst other things, interest rates, credit and currencies, and other Permitted Investments as part of the Portfolio's general investment policy, to generate returns and/or for hedging purposes. Furthermore, the Portfolio may engage in financial derivative transactions including, but not limited to, swaps, futures contracts, options, reverse repurchase agreements, and other transactions involving currency and interest rate hedging, security hedging or other strategies to manage risk relating to the Portfolio's investments, to leverage the Portfolio and to establish speculative positions.

Please also refer to Appendix C - "Derivatives and Efficient Portfolio Management Techniques" together with Section 4 "Risk Considerations" in the Prospectus (and in particular Paragraph 4.6 "Investments in derivatives") for further information on the use of financial derivative instruments, their purposes and some of the risk considerations associated with them.

### Overview of the Investment Process

In seeking to replicate the returns of a portfolio (or basket) of investment funds that employ Trend Strategies, the Portfolio will not invest in hedge funds or hedge fund indices. Instead, the Investment Adviser generally expects to use statistical analysis of historical performance data in respect of such funds, along with public market information obtained from hedge fund databases, regulatory filings and other sources, to identify relevant Factors a portfolio (or basket) of investment funds that employ Relative Value Strategies. The investment strategy of the Portfolio reflects the theory that returns of hedge funds of particular styles are driven to a large extent by exposure to common factors.

The Investment Adviser expects to utilise an Algorithm to implement the investment strategy of this Portfolio.

The Investment Adviser may remove or add new markets and/or sectors from time to time in its sole discretion.

The Algorithm for the Portfolio seeks to analyse certain market data in order to provide computer generated trading signals on an automated basis. The Algorithm aims to identify trends in the markets by observing historical prices in

the markets over multiple time periods. The Algorithm measures the strength of such identified trends and generates signals to take long or short positions in the markets based on the strength of those trends.

The Algorithm shall operate in a manner that weights the positions acquired in respect of each market relating to a particular sector according to the liquidity of the positions acquired/taken within such market (i.e., the more liquid a market within a sector, generally the higher the allocation to that market and vice versa) and to the volatility of such market and the related positions.

The Investment Adviser generally expects to make investment decisions that are consistent with the Algorithm. While the Investment Adviser has discretion to deviate from the Algorithm, it expects to do so only in exceptional circumstances. In addition, the Investment Adviser will have discretion to determine the manner in which to implement the Algorithm's recommendations. The Investment Adviser expects periodically to review the Algorithm, including without limitation, the rules and assumptions on which the Algorithm is based, and may modify the Algorithm at any time and from time to time in its sole discretion without notice to investors.

Certain areas of the Goldman Sachs Group, Inc. and its affiliates (together "Goldman Sachs"), including Goldman Sachs' trading and prime brokerage businesses, may have access to fund-specific and position-level information relating to one or more Trend Strategies. Any such information will not be available to the Investment Adviser for use with the Algorithm.

Changes in market conditions can be sudden and could materially adversely affect the performance of the Portfolio. The percentage of the Portfolio's assets allocated to a market or sector will be determined by the Algorithm, based on various considerations, which may include the amount of the Portfolio's assets under management and the trading signals from the Algorithm. Greater concentration in any market or sector, may entail additional risks. Please see Section 5 "Goldman Sachs Funds - Specific Risk Considerations and Conflicts of Interest" (and in particular paragraph "Portfolio concentration") of the Supplement.

The success of the Portfolio's investment strategy is dependent on certain underlying assumptions, including that the Algorithm correctly measures the trend for each market and/or sector, correctly determines the size and timing of the Portfolio's investment in each market and/or sector and that markets and/or sectors exhibit trends that can be followed. Please see Section 5 "Goldman Sachs Funds - Specific Risk Considerations and Conflicts of Interest" (and in particular paragraphs "Reliance on Algorithms" and "Risks associated with particular strategies and investment techniques") of the Supplement.

The Portfolio's historical tracking error and excess return figures can be found in the Monthly Fund Updates at [www.gsam.com](http://www.gsam.com).

**The Portfolio's investment programme is speculative and entails substantial risks. There can be no assurance that the investment objective of the Portfolio will be achieved or that the investment strategy will be successful, and results may vary substantially over time. The Portfolio's investment programme may be highly concentrated from time to time in that the Portfolio may invest substantially all of its assets in a limited number of markets and/or sectors. There is no assurance that the various steps employed in the investment process of the Portfolio will be successful, that the models and techniques utilised therein will be implemented successfully or that they are adequate for their intended uses, or that the discretionary element of the investment process of the Portfolio will be exercised in a manner that is successful or that is not adverse to each respective Portfolio.**

In relation to Article 7 of SFDR, which requires disclosure of how principal adverse impacts are considered at Portfolio level, the Investment Manager notes that there are still a number of uncertainties regarding this obligation, in particular due to the absence of centralised implementing standards, local guidance or established market practice. The Investment Manager does not currently take principal adverse impacts on sustainability factors into account in respect of the Portfolio, but will keep its approach in this area for the Portfolio under review.

As per Article 7 of the Taxonomy Regulation, Shareholders should note that investments underlying the Portfolios do not take into account the EU criteria for environmentally sustainable economic activities.

The Investment Adviser intends to engage in SFTR techniques on, amongst other things, equity securities, markets, interest rates, credit, currencies, commodity indices and other Permitted Investments in line with the exposures set out below (in each case as a percentage of net asset value).

| Type of transaction                                    | Under normal circumstances it is generally expected that the principal amount of such transactions would represent a proportion of the Portfolio's net asset value indicated below.* | Under normal circumstances, it is generally expected that the principal amount of the Portfolio's assets that can be subject to the transaction may represent up to a maximum of the proportion of the Portfolio's net asset value indicated below. |

\*In certain circumstances this proportion may be higher.

### 3. Calculation of Global Exposure and Expected Level of Leverage

The Table below sets out for this Portfolio the information mentioned in Section 3 "Goldman Sachs Funds – Calculation of Global Exposure and Expected Level of Leverage" of the Supplement.

| Market Risk Calculation | Limit | Reference Portfolio/Benchmark* | Expected Level of Leverage                 |
|-------------------------|-------|--------------------------------|--------------------------------------------|
|                         |       |                                | Gross Sum of Notionals<br>(Gross Exposure) |
| Absolute VaR            | 20%   | ICE BofA 3 month US T-Bill *   | 400%-1500%**                               |

\*For performance reporting purposes, the Portfolio will use the ICE BofA 3 month US T-Bill as a reference benchmark.

The Portfolio is actively managed and is not designed to track its Reference Portfolio/Benchmark. Therefore the performance of the Portfolio and the Reference Portfolio/Benchmark may deviate.

The Portfolio may offer Share Classes which are denominated in or hedged into currencies other than the Base Currency of the Portfolio. Accordingly, the Reference Portfolio/Benchmark noted above may be denominated in or hedged into the relevant currency of a particular Share Class.

\*\*This expected range of leverage is not a limit and may vary over time particularly as described below. The actual levels may deviate from the stated range.

Given that the Portfolio's investment policy is implemented through the use of financial derivative instruments, including those referred to in Section 3 "Goldman Sachs Funds - Calculation of Global Exposure and Expected Level of Leverage" of the Supplement, the expected level of leverage calculated under the gross sum of notionals exposures, may be relatively high. This is particularly emphasised in the trend driven trading strategies employed, which often involve the use of swaps (such as short term interest rate swaps, total return swaps or equity swaps), options, futures and forward currency contracts, which may result in relatively higher levels of notional exposure from such financial derivative instruments. For further information on the use of financial derivative instruments and associated risks, please refer to Section 4 "Risk Considerations" and Appendix C "Derivatives and Efficient Portfolio Management Techniques" in the Prospectus. It also means that the expected level of leverage may exceed the stated range, particularly as a result of effecting certain investment exposures and also as a result of investor redemptions that can result in offsetting financial derivative instruments trades being placed which whilst they reduce investment exposure can increase leverage based on the gross sum of notionals calculation.

Shareholders should note that leverage resulting from the use of financial derivative instruments may result in magnified losses. However, the "Expected Level of Leverage" using the gross sum of notionals in the table above does not necessarily provide an appropriate illustration of the overall risk profile of the Portfolio as financial derivative

instruments are used to manage risk as well as to seek return. This is largely due to the fact that the gross sum of notional exposure simply aggregates the absolute sum of all long and short financial derivative instrument positions, even if the financial derivative instruments are for hedging or offsetting purposes. Further the gross sum of notionals calculation uses just notional values rather than measures that calculate the overall contributions to risk which will often explain why the leverage levels under this method appear high. By way of illustration, to achieve a desired level of investment risk in interest rate markets, the amount of gross leverage used to achieve this risk will vary significantly depending on the underlying market risk (or 'duration') of the instrument chosen to implement this investment decision. For example, using an instrument with less duration risk - such as a shorter maturity interest rate derivative - requires more leverage to achieve the higher amount of required notional market exposure, compared to using a longer maturity instrument with higher duration risk. In this example, a 2 year maturity interest rate derivative would require approximately 4 times as much notional exposure compared to using a 10 year maturity instrument.

Please refer to Paragraph 1 "Investment Objective" and Paragraph 2 "Investment Policy" of this Appendix for further information on the relevant Portfolio's strategy and the Synthetic Risk and Reward Indicator (SRRI) in the KIID of the Portfolio for details on such Portfolio's historic risk profile where applicable. Further details on the average leverage levels, as calculated using the gross sum of notionals exposures, will be disclosed in the Fund's annual financial statements for the relevant accounting period.

#### 4. Principal risks of the Portfolio

The Portfolio may be exposed to sustainability risks from time to time. A sustainability risk is defined in the EU Sustainable Finance Disclosure Regulation as an environmental, social or governance event or condition that could cause an actual or a potential material negative impact on the value of investments. The universe of sustainability events or conditions is very broad, and their relevance, materiality and impact on investments will depend on a number of factors such as the investment strategy pursued by the Portfolio, asset class, asset location and asset sector. Depending on the circumstances, examples of sustainability risks can include physical environmental risks, climate change transition risks, supply chain disruptions, improper labour practices, lack of board diversity and corruption. If they materialise, sustainability risks can reduce the value of underlying investments held within the Portfolio and could have a material impact on the performance and returns of the Portfolio.

The Investment Adviser does not specifically consider sustainability risks in its investment decision making.

#### 5. Portfolio Share Class Table

The following table sets out the different Share Classes of this Portfolio and the relevant fees and expenses. For further details on the Share Classes, please refer to Section 3 "Description of Share Classes" of the Prospectus.

| Base Currency:        | USD                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |              |                                               |                |                  |                                 |
|-----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|-----------------------------------------------|----------------|------------------|---------------------------------|
| Additional Notes:     | <p>Each type of Share Class listed in the table below may also be offered:</p> <p>(i) Denominated in or hedged into other currencies. For a list of available currencies and minimum investment amounts, please refer to Section 2 "Goldman Sachs Funds – Minimum Investment Amount Table" of the Supplement. The Sales Charge, contingent deferred sales charge, Management Fee, distribution fee, and operating expenses (in each case, where applicable) for these additional Share Classes are the same as for the relevant Share Class type in the below table.</p> <p>(ii) As accumulation or distribution classes. Please refer to Section 18 "Dividend Policy" of the Prospectus.</p> |              |                                               |                |                  |                                 |
| Share Class           | Share Class Currency                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Sales Charge | Contingent Deferred Sales Charge <sup>1</sup> | Management Fee | Distribution Fee | Operating Expenses <sup>2</sup> |
| Base Shares           | USD                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Up to 5.50 % | Nil                                           | Up to 1.35 %   | Nil              | Variable                        |

| Class I Shares   | USD | Nil          | Nil | 0.65 %       | Nil          | Variable |
| Class IP Shares  | USD | Nil          | Nil | Up to 0.65 % | Nil          | Variable |
| Class IS Shares  | USD | Nil          | Nil | Up to 1.00 % | Nil          | Variable |
| Class IX Shares  | USD | Nil          | Nil | Up to 1.00 % | Nil          | Variable |
| Class IO Shares  | USD | Nil          | Nil | N/A          | Nil          | Variable |
| Class IXO Shares | USD | Nil          | Nil | N/A          | Nil          | Variable |

<sup>1</sup> A contingent deferred sales charge is imposed on Class C Shares. Please refer to Section 3 "Description of Share Classes" of the Prospectus for further information.

<sup>2</sup> The Portfolio pays transaction costs, including taxes and brokerage commissions, each time it buys and sells securities or instruments and may also pay Borrowing Costs. Shareholders should note that, these costs are not reflected in the Portfolio's operating expenses, but will be reflected in the Portfolio's performance.

## 6. Subscriptions, Redemptions and Exchanges

Subject to the terms outlined in the Prospectus, subscriptions, redemptions and exchanges of Shares of the Portfolio may take place on any Business Day. The cut-off time is 2:00 p.m. Central European time on the previous Business Day, as illustrated below. The table refers to 1st February as example date for the receipt of a subscription or a redemption order by the Distributor, the Registrar and Transfer Agent, the Management Company or the Fund (assuming that each of the 1st February and the other dates mentioned below falls on a Business Day).

| Base (Acc.)                                                                                   |                                                                     |
|-----------------------------------------------------------------------------------------------|---------------------------------------------------------------------|
| Cut-off time:                                                                                 | 2:00 p.m. Central European time on 1st February                     |
| Valuation point of securities held in the Portfolio with respect to the relevant Share Class: | At least two hours after 2pm Central European time on 2nd February. |
| Dealing Day                                                                                   | 2nd February                                                        |

### 3. Goldman Sachs Funds - Specific Risk Considerations and Conflicts of Interest

The Risk Considerations and Conflicts of Interest referred to below are specific to the Alternative Portfolios and are in addition to and not in substitution for the Risk Considerations and Conflicts of Interest described in the Prospectus. The Risk Considerations referred to below must be read in conjunction with those described in the Prospectus.

**No Assurance of Accuracy of Replication:** For the reasons listed below, a Portfolio may not replicate hedge fund returns; instead, it should be viewed as implementing an independent trading strategy that attempts to display a pattern of returns over time that broadly resembles the pattern of returns of hedge funds implementing a strategy employed by a Portfolio as a broad asset class and it should be noted that there are no assurances that such attempts will be successful.

1) While the Portfolio is based on multiple Factors, markets, sectors, Sub-Strategies or asset classes, hedge funds implementing a strategy employed by a Portfolio may invest in a much broader range of more geographically diverse and less liquid assets;

2) The Algorithm's return mapping is based on historical data regarding the Factors, markets, sectors, Sub-Strategies or assets. Hedge funds implementing a strategy employed by a Portfolio can be dynamic and unpredictable, and the Algorithm used to estimate asset allocation may not yield an accurate estimate of the then current allocation. Past and current levels of the Factors, markets, sectors, Sub-Strategies or assets are not necessarily indicative of future returns. Furthermore, even if historic returns prove to be a reliable indicator of future returns in one or more periods during the term of the investments, the Algorithm may not continue to effectively identify such returns; and

3) The Investment Adviser has a constraint on the target allocations to Factors, markets, sectors, Sub-Strategies or assets while hedge funds implementing a strategy employed by a Portfolio are typically not so constrained in their concentration of investments, and their returns may reflect the performance of leveraged investments. Accordingly, an investment linked to a Portfolio may be exposed more or less to any particular asset class and/or to more or less leverage than hedge funds implementing a strategy employed by a Portfolio in general are then currently employing.

In addition, there can be no assurance that attempting to replicate hedge funds implementing a strategy employed by a Portfolio performance will be an effective investment strategy.

**Limitations of algorithmic framework:** With respect to calculating the allocation of the asset classes (that is, calculating the "weights") included in the Portfolio, prospective investors and Shareholders should note that there may be circumstances, including (but not limited to) the following, in which the market indicators have no relationship with the future performance of the corresponding strategy/asset:

- (a) rapid regime shifts in the market with no clear performance trends;
- (b) breakdown in historical relationships between market indicators and strategies/assets;
- (c) the strategy/asset no longer represents a homogeneous investment style; and
- (d) exogenous events render the systematic algorithm ineffective for a period.

A proprietary algorithmic framework may be subject to a number of limitations, such as having no built in mechanism for (i) controlling or managing volatility or (ii) managing or hedging any foreign exchange related risk that may be inherent in an investment in the underlying exposures of the asset classes.

**Reliance on Algorithms:** The success of a Portfolio's investment activities depends, among other things, on the ability of the Algorithm to identify appropriate investment opportunities, which involves a high degree of uncertainty. The Algorithm may, for a variety of reasons, fail to accurately predict market events, including because future events may not necessarily follow historical norms or because of defects in the models.

The Algorithm makes recommendations based on assumptions, assessments and estimates, which are subject to error. There is no assurance that the Algorithm is adequate or that it is adequately utilized by the Investment Adviser. There is no assurance that the Investment Adviser would use or not use its discretion to modify or deviate from the Algorithm in the way which would best implement a strategy. There is no assurance that the manner in which the Investment Adviser would use or not use such discretion would result in the best return for investors. Therefore, there can be no assurance that the Portfolios' investment objectives will be achieved.

**No Constraint of Full Exposure:** A Portfolio does not require the Factors, markets, sectors, Sub-Strategies or assets to sum to 100% of the Portfolio value at any time, and a portion of the Portfolio return may be derived from cash returns.

**Portfolio concentration:** Although the strategy of certain Portfolios of investing in a limited number of Factors, markets, sectors, Sub-Strategies or asset classes has the potential to generate attractive returns over time, it may increase the volatility of such Portfolios' investment performance as compared to funds that invest in a larger number of Factors, markets, sectors, Sub-Strategies or asset classes. If the Factors, markets, sectors, Sub-Strategies or asset classes in which such Portfolios invest perform poorly, the Portfolios could incur greater losses than if it had invested in a larger number of Factors, markets, sectors, Sub-Strategies or asset classes.

**Short Exposure to the Factors, markets, sectors or assets:** The Algorithm may also provide that the weight of a Factor, market, sector, Sub-Strategy or asset in a Portfolio is negative, i.e. a synthetic short position in the relevant Factor, market, sector, Sub-Strategy or asset. Shareholders should be aware that an investment in the Portfolio is not the same as a long position in each Factor, market, sector, Sub-Strategy or asset, and that an investment in a Portfolio may decline in value from month to month, even if the value of any or all of the Factors, markets, sectors or assets increases during that timeframe.

**The Portfolio is not a hedge fund:** The Investment Adviser seeks to approximate hedge fund returns by mapping historical hedge fund returns to those of various Factors, markets, sector or assets in a manner determined by the Algorithm as applicable to each Portfolio. Individual hedge funds themselves may perform better or worse than such returns based on the skill of their particular manager.

**Shareholders will have no rights with respect to the Factors, markets, sectors, Sub-Strategies or assets in the Portfolio**

**Volatility:** The Factors, markets, sectors, Sub-Strategies or assets included in a Portfolio can be highly volatile, which means that their value may increase or decrease significantly over a short period of time. In particular, a Portfolio may be highly volatile in terms of performance because the Portfolio may combine long and/or short positions in liquid instruments across the market. It is impossible to predict the future performance of the Factors, markets, sectors, Sub-Strategies or assets based on their historical performance. The return on an investment linked to any Factors, markets, sectors, Sub-Strategies or assets may vary substantially from time to time. Volatility in one or more Factors, markets, sectors, Sub-Strategies or assets will increase the risk of an adverse effect on such a return caused by a fluctuation in the value of one or more of the Factors, markets, sectors, Sub-Strategies or assets.

### **Risks associated with particular strategies and investment techniques**

**Volatility trading:** Market volatility reflects the degree of instability and expected instability of the performance of the Shares. The level of market volatility is not purely a measurement of the actual volatility, but is largely determined by the prices for instruments which offer investors protection against such market volatility. The prices of these instruments are determined by forces of supply and demand in the options and derivatives markets generally. These forces are, themselves, affected by factors such as actual market volatility, expected volatility, macro-economic factors and speculation.

Market volatility is a derivative of directional market movements and is itself often materially more volatile than underlying reference asset prices. Price movements are influenced by many unpredictable factors, such as market sentiment, inflation rates, interest rate movements and general economic and political conditions. At any given time, different market participants will have different views on the level of market volatility; if the Investment Adviser incorrectly estimates market volatility, the Investment Adviser will misprice the options which it trades.

Volatility strategies depend on mispricing and changes in volatility. In periods of trendless, stagnant markets and/or deflation, alternative investment strategies have materially diminished prospects for profitability.

**Relative value strategies:** The success of relative value trading is dependent on the ability to exploit relative mispricing among interrelated instruments. Although relative value positions are considered to have a lower risk profile than directional trades as the former attempt to exploit price differentials not overall price movements, relative value strategies are by no means without risk. Mispricing, even if correctly identified, may not converge within the time frame within which a Portfolio maintains its positions. Even pure "riskless" arbitrage — which is rare — can result in significant losses if the arbitrage cannot be sustained (due, for example, to margin calls) until expiration. A Portfolio's relative value strategies are subject to the risks of disruptions in historical price relationships, the restricted availability of credit and the obsolescence or inaccuracy of its or third-party valuation models. Market disruptions may also force a Portfolio to close out one or more positions. Such disruptions have in the past resulted in substantial losses for relative value strategies.

**Directional trading:** Certain positions taken by a Portfolio may be designed to profit from forecasting absolute price movements in a particular instrument. Predicting future prices is inherently uncertain and the losses incurred, if the market moves against a position, will often not be hedged. The speculative aspect of attempting to predict absolute price movements is generally perceived to exceed that involved in attempting to predict relative price fluctuations.

**Absolute return strategies:** Alternative investments may often be purchased on the basis of their potential to produce "absolute returns", or returns independent of the overall direction of the relevant markets. However, there can be no assurance that any such investments will actually be successful at producing consistently positive returns or returns independent of the overall direction of the relevant markets. The Investment Adviser does not make any representation or warranty, express or implied, that any strategy or generally any investment made by any Portfolio will do so in the future.

**Event driven strategies:** The success of event driven trading depends on the successful prediction of whether various corporate events will occur or be consummated. The consummation of mergers, exchange offers, tender offers and other similar transactions can be prevented or delayed, or the terms changed, by a variety of factors. If a proposed transaction appears likely not to be consummated or in fact is not consummated or is delayed, the market price of the securities purchased by a Portfolio may decline sharply and result in losses to such Portfolio.

**Commodity and energy trading:** A Portfolio may from time to time have a significant commitment to commodity and energy index trading (i.e., trading in indices on electricity, natural gas, oil, crops and meats and related derivative instruments, including swaps, options and futures). Commodity index and energy index trading involves certain financial risks that are qualitatively different from those incurred in trading securities and other financial instruments (see also "Commodities, commodity indices or commodity strategies" below).

### General risks relating to strategies

**No assurance of accuracy of replication:** Replication risk is the risk that the performance of a Portfolio, the objective of which is to replicate the performance of a specific strategy, will diverge from that of the relevant strategy. In particular, this divergence may result from (i) differences in timing and amount between changes made to the strategy and subsequent conforming trades made by the Portfolio, the impact of which includes but is not limited to differences in strategy component prices and currency exchange rates; (ii) Portfolio brokerage costs; (iii) fees and expenses charged by the Portfolio; (iv) taxation of the Portfolio's investments; (v) timing of investment trades in respect of subscription and redemption requests; (vi) fair-valuation of the securities and application of an alternate valuation methodology; (vii) market disruption events; (viii) holdings of cash and cash equivalents by the Portfolio; and (ix) imperfect correlation between the Portfolio's investments and the components of the strategy.

**No active management of exposure to strategies:** In case of Portfolios that are designed to replicate a particular strategy, the investment objective of the relevant Portfolios will seek to generally replicate the relevant strategy when it is flat or declining as well as when it is rising. As a result, it is highly likely that the value of the Shares in those Portfolios will be adversely affected by a decline in the price of components of the relevant strategy. The Investment Adviser will not engage on behalf of any Portfolio in any activity designed to obtain a profit from, or to reduce losses caused by, changes in the value of the components of the relevant strategy. Also, where the relevant strategy has a volatility target, this target may be based on assessment of historical volatility over a period of time while an actively managed product may potentially respond more directly to immediate volatility conditions.

**No active management within strategies:** Strategies may be operated according to an algorithm based on pre-determined rules as described in this Supplement. Operation of the algorithm may result in negative performance, and depending on the strategy there may not be any form of active management to amend the algorithm or otherwise attempt to mitigate loss. The aforementioned potential consequences of the absence of active management within a strategy could be further exacerbated during abnormal market conditions that may not have been taken into account in the construction of the strategy.

**Traded instruments or assets of a strategy:** Investments made in accordance with a strategy may not take into account the particular interests of the Fund, the Portfolio or the Shareholders. A strategy generally employs a complex notional trading programme and relies on analytical models to notionally trade sophisticated financial instruments. Such analytical models may be fallible which could result in losses. Such a strategy may be subject to sudden, unexpected and substantial price movements. Consequently, the notional trading of such investments in accordance with the strategy can lead to substantial losses as well as gains in the net asset value of a Share class within a short period of time. The instruments or contracts a strategy is exposed to may become disrupted or become illiquid, resulting in losses.

**Limited track record of a strategy:** Where a strategy is relatively new and no or limited historical performance data exists with respect to such strategy, the investment may involve greater risk than shares linked to a strategy with a proven track record. The limited track record with respect to the strategy may be particularly significant where the algorithm employed for the strategy is based on historical data in returns to date that may or may not be repeated in the future.

**A strategy could be changed:** The components of a strategy may be added, deleted or substituted over time. The changing of components of any strategy may affect the level of such strategy as a newly added component may perform significantly worse or better than the component it replaces, which in turn may affect the value of any Shares of a Portfolio that has invested in such strategy.

## **Portfolios (or baskets) comprised of various constituents**

### *Exposure to performance of a portfolio (or basket) and its underlying constituents*

Where a Portfolio references a portfolio (or basket) of underlying constituents or invests in the underlying constituents of such portfolio (or basket), Shareholders are exposed to the performance of such portfolio (or basket). The Shareholders will bear the risk that such performance cannot be predicted and is determined by macroeconomic factors relating to the constituents that comprise such portfolio (or basket).

### *Fewer number of portfolio (or basket) constituents*

The performance of a portfolio (or basket) that includes a fewer number of portfolio (or basket) constituents will be more affected by changes in the value of any particular portfolio (or basket) constituent included therein than a portfolio (or basket) that includes a greater number of portfolio (or basket) constituents.

### *Unequal weighting of portfolio (or basket) constituents*

The performance of a portfolio (or basket) that gives greater weight to some portfolio (or basket) constituents will be more affected by changes in the value of any such particular portfolio (or basket) constituent included therein than a portfolio (or basket) that gives relatively equal weight to each portfolio (or basket) constituent.

### *High correlation of portfolio (or basket) constituents could have a significant effect on amounts payable*

Correlation of the portfolio (or basket) constituents indicates the level of interdependence among the individual portfolio (or basket) constituents with respect to their performance. Correlation has a value ranging from "-1" to "+1", whereby a correlation of "+1", i.e. a high positive correlation, means that the performance of the portfolio (or basket) constituents always moves in the same direction. A correlation of "-1", i.e. a high negative correlation, means that the performance of the portfolio (or basket) constituents is always diametrically opposed. A correlation of "0" indicates that it is not possible to make a statement on the relationship between the portfolio (or basket) constituents. If, for example, all of the portfolio (or basket) constituents originate from the same sector and the same country, a high

positive correlation can generally be assumed. Correlation may fall however, for example when the company whose shares are included in the portfolio (or basket) are engaged in intense competition for market shares and the same markets.

Where the Portfolio is subject to high positive correlation, any move in the performance of the portfolio (or basket) constituents will exaggerate the performance of the Portfolio.

Highly correlated assets may be required to be treated as the same asset for the purpose of calculating exposure. This may result in a reduced exposure to the underlying index or strategy.

Negative performance of a portfolio (or basket) constituent may outweigh a positive performance of one or more portfolio (or basket) constituents.

Shareholders must be aware that even in the case of a positive performance of one or more portfolio (or basket) constituents, the performance of the portfolio (or basket) as a whole may be negative if the performance of the other portfolio (or basket) constituents is negative to a greater extent.

#### Change in composition of portfolio (or basket)

When the Investment Adviser adjusts the composition of the portfolio (or basket) after Shares have been issued, the Shareholder may not assume that the composition of the portfolio (or basket) will remain constant during the term of the Portfolio. Shareholders should be aware that the replacement portfolio (or basket) constituent may perform differently to the outgoing portfolio (or basket) constituent, which may have an adverse effect on the performance of the portfolio (or basket).

#### **Hedge funds and other funds**

##### Valuations are performed in accordance with the terms and conditions governing the fund

The valuation of hedge funds and other funds is generally controlled by the management company and/or the investment administrator of the fund. Such valuations may be based upon the unaudited financial records of the fund and any accounts pertaining thereto. Such valuations may be preliminary calculations of the net asset values of the fund and accounts. The fund may hold a significant number of investments which are illiquid or otherwise not actively traded and in respect of which reliable net asset values may be difficult to obtain. In consequence, the management company and/or the investment administrator may vary certain quotations for such investments held by the fund in order to reflect its judgement as to the fair value thereof. Therefore, valuations may be subject to subsequent adjustment upward or downward. Uncertainties as to the valuation of fund assets and/or accounts may have an adverse effect on the net asset value of the fund where such judgements regarding valuations prove to be incorrect.

##### Trading charges may apply

The performance of a fund will be affected by the charges incurred thereby relating to the investments of such fund. The fund may engage in short-term trading which may result in increased turnover and associated higher than normal brokerage commissions and other expenses.

##### Hedge Funds may be subject to transfer restrictions and illiquidity

Hedge funds and the assets thereof may be subject to transfer restrictions arising by way of applicable securities laws or otherwise. Holders of units or shares in a fund may have the right to transfer or withdraw their investment in the funds only at certain times and upon completion of certain documentary formalities and such rights may be subject to suspension or alteration. These circumstances may affect the net asset value of the funds in question. Potential investors should familiarise themselves with the features of the hedge funds in this regard.

A hedge fund may make investments in markets that are volatile and/or illiquid and it may be difficult or costly for positions therein to be opened or liquidated.

### Dependence on key individuals

The success of a hedge fund or other fund is dependent on the expertise of its managers. The loss of one or more individuals could have a material adverse effect on the ability of a fund manager to direct a fund's portfolio, resulting in losses for a fund and a decline in the value of a fund. Indeed, certain fund managers may have only one principal, without whom the relevant fund manager could not continue to operate.

Certain funds may be managed by investment managers who have managed hedge funds for a relatively short period of time. The previous experience of such investment managers is typically in trading proprietary accounts of financial institutions or managing unhedged accounts of institutional asset managers or other investment firms. As such investment managers do not have direct experience in managing hedge funds or other funds, including experience with financial, legal or regulatory considerations unique to fund management, and there is generally less information available on which to base an opinion of such managers' investment and management expertise, investments with such investment managers may be subject to greater risk and uncertainty than investments with more experienced fund managers.

There is a risk that a fund manager could divert or abscond with the assets, fail to follow agreed-upon investment strategies, provide false reports of operations or engage in other misconduct.

### Non-deductible taxes

As funds may be resident in so-called off-shore jurisdictions, which have not entered into any double taxation conventions with other countries, any income of such fund may be subject to taxation in the countries of origin. As such withholding taxes are non-deductible due to the fact that such funds are not subject to income taxation in their countries of residence, the fund's net income may be reduced which may have a negative impact on the performance of such fund.

### **Commodities, commodity indices or commodity strategies**

Commodities comprise physical commodities, which need to be stored and transported, and commodity contracts, which are agreements either to buy or sell a set amount of a physical commodity at a predetermined price and delivery period (which is generally referred to as a delivery month), or to make and receive a cash payment based on changes in the price of the physical commodity.

Commodity contracts may be traded on regulated specialised futures exchanges (such as futures contracts) or may be traded directly between market participants OTC (such as swaps and forward contracts) on trading facilities that are subject to lesser degrees of regulation or, in some cases, no substantive regulation. The performance of commodity contracts is correlated with, but may differ from, the performance of physical commodities. The performance of a commodity, and consequently the corresponding commodity contract, is dependent upon various factors, including supply and demand, liquidity, weather conditions and natural disasters, direct investment costs (e.g. storage and insurance costs), location and changes in tax rates. Commodity prices are more volatile than other asset categories, making investments in commodities riskier and more complex than other investments.

### Factors affecting the performance of commodity indices and commodity strategies

Commodity indices and commodity strategies track the performance of a synthetic production-weighted basket of commodity contracts on certain physical commodities. The level of commodity indices and commodity strategies replicate an actual investment in commodity contracts, and therefore may go up or down depending on the overall performance of this weighted basket of commodity contracts. Although commodity indices and commodity strategies track the performance of the commodity markets, in a manner generally similar to the way in which an index of equity securities tracks the performance of the share market, there are important differences between a commodity index or a commodity strategy and an equity index. First, an equity index typically weights the shares in the index based on market capitalisation, while the commodities included in a commodity index or a commodity strategy are typically, though not always, weighted based on their world production levels and the dollar value of those levels with the exception any sub-index of a commodity index or a commodity strategy based upon such sub-index. Second, unlike shares, commodity contracts expire periodically and, in order to maintain an investment in commodity contracts, it is necessary to liquidate such commodity contracts before they expire and establish positions in longer-dated commodity contracts. This feature of a commodity index or a commodity strategy, which is discussed below – see

"Exposure to "rolling" and its impact on the performance of a commodity index and a commodity strategy", has important implications for changes in the value of a commodity index or a commodity strategy. Finally, the performance of a commodity index or a commodity strategy is dependent upon the macroeconomic factors relating to the commodities that underpin the commodities contracts included in such commodity index or a commodity strategy.

*Exposure to "rolling" and its impact on the performance of a commodity index and a commodity strategy*

*Rolling commodity contracts*

Since any commodity contract has a predetermined expiration date on which trading of the commodity contract ceases, holding a commodity contract until expiration will result in delivery of the underlying physical commodity or the requirement to make or receive a cash settlement. "Rolling" the commodity contracts means that the commodity contracts that are nearing expiration (the "near-dated commodity contracts") are sold before they expire and commodity contracts that have contract specifications identical to the near-dated commodity contract except with an expiration date further in the future (the "longer-dated commodity contracts") are bought. This would allow an actual investor to maintain an investment position without receiving delivery of physical commodities or making or receiving a cash settlement. As a commodity index or a commodity strategy replicates an actual investment in commodity contracts, it takes into account the need to roll the commodity contracts included in such commodity index or a commodity strategy, as the case may be. Specifically, as a near-dated commodity contract approaches expiration, the commodity index or a commodity strategy is calculated as if the near-dated commodity contract is sold and the proceeds of that sale are used to purchase a longer-dated commodity contract of equivalent value in the delivery month applicable for such commodity contract included in such commodity index or a commodity strategy, as the case may be.

It is typical in commodity markets to take the price of the first-nearby commodity futures contract with respect to a commodity (that is, as of a given date, the commodity futures contract first to expire following such date) as a reference for the "spot" price of such commodity. Over time, the "spot" price will vary for two reasons. Firstly, the price of the first-nearby commodity futures contract will vary over time due to market fluctuations. Secondly, when the commodity contract which is considered to be the first-nearby commodity futures contract changes from contract expiration "X" to contract expiration "Y" (as contract expiration "X" is approaching expiry), there is a discrete change in the price of the "prevailing" first-nearby commodity futures contract. If contract expiration "Y" is trading at a premium to contract expiration "X" (referred to as a "contango" market, as described in further detail below), the discrete change will represent a "jump" in the "spot" price. If contract expiration "Y" is trading at a discount to contract expiration "X" (referred to as a "backwardated" market, as described in further detail below) the discrete change will represent a "drop" in the "spot" price.

Since such "jump" or "drop" does not correspond to a change in price of any given commodity contract, these economics cannot be captured by a futures-linked investment. Therefore, all other things being equal (in particular, assuming no change in the relative price of the various contract expirations with respect to the relevant commodity contract), in a "contango" market a long-only futures-linked investment may be expected to underperform the "spot" price (due to not capturing the "jump" in spot price) and in a "backwardated" market a long-only futures-linked investment may be expected to outperform the "spot" price (due to not capturing the "drop" in spot price).

*Backwardation*

When the price of the near-dated commodity contract is greater than the price of the longer-dated commodity contract, the market for such contracts is referred to as in "backwardation". If the rolling process occurs when the price of a commodity contract is in backwardation, this results in a greater quantity of the longer-dated commodity contract being acquired for the same value. Rolling contracts in a backwardated market can (putting aside other considerations) create a "roll yield".

*Contango*

When the price of the near-dated commodity contract is lower than the price of the longer-dated commodity contract, the market for such contracts is referred to as in "contango". If the rolling process occurs when the price of a commodity contract is in contango, this results in a smaller quantity of the longer-dated commodity contract being acquired for the same value. Rolling contracts in a contango market can (putting aside other considerations) result

in negative "roll yields" which could adversely affect the level of a commodity index or a commodity strategy, as the case may be, tied to that contract.

*The effects of rolling on the level of a commodity index and a commodity strategy*

"Rolling" can affect a commodity index or a commodity strategy in two ways. Firstly, if the commodity index or commodity strategy, as the case may be, synthetically owns more commodity contracts as a result of the rolling process, albeit at a lower price (backwardation), the gain or loss on the new positions for a given movement in the prices of the commodity contracts will be greater than if the commodity index or commodity strategy, as the case may be, had owned the same number of commodity contracts as before the rolling process. Conversely, if the commodity index or commodity strategy, as the case may be, synthetically owns fewer commodity contracts as a result of the rolling process, albeit at a higher price (contango), the gain or loss on the new positions for a given movement in the prices of the commodity contracts will be less than if the commodity index or commodity strategy, as the case may be, had owned the same number of commodity contracts as before the rolling process. These differentials in the quantities of contracts sold and purchased may have a positive or negative effect on the level of the commodity index or commodity strategy, as the case may be, (measured on the basis of its dollar value).

Secondly, in a contango market, and in the absence of significant market changes, the prices of the longer-dated commodity contracts which the commodity index or commodity strategy, as the case may be, synthetically buys and holds are expected to, but may not, decrease over time as they near expiry. The expected decrease in price of these longer-dated commodity contracts as they near expiry can potentially cause the level of the commodity index or commodity strategy, as the case may be, to decrease. Conversely, in a backwardated market, and in the absence of significant market changes, the prices of the longer-dated commodity contracts are expected to, but may not, increase over time as they near expiry. The expected increase in price of these longer-dated commodity contracts as they near expiry can potentially cause the level of the commodity index or commodity strategy, as the case may be, to increase.

*The effects of "Rolling" may be mitigated*

The trend in prices of the commodity contracts may mitigate the effects of rolling. Also, as a commodity index or commodity strategy, as the case may be, may include many different types of commodity contract, each of those commodity contracts may be in a different type of market, either backwardation or contango, and therefore may offset any losses and gains attributable to rolling. In addition and in the case of a commodity strategy only, as referred to in risk factor "Factors affecting the performance of Commodity Strategies only" below, by having different rules to the commodity index on which it is based governing the procedure by which expiring positions in the commodity contracts underlying such commodity strategy may be rolled forward into more distant contract expirations, the commodity strategy may seek to mitigate the effects of contango from those employed by the commodity index.

There can be no assurance, however, that these modifications will be effective in mitigating the effects of contango on the rolling of contracts or that the modifications themselves will not adversely affect the net asset value of a Portfolio referencing such commodity strategy.

*Change in composition or discontinuance of a commodity index or a commodity strategy*

A commodity index or a commodity strategy sponsor is responsible for the composition, calculation and maintenance of such commodity index or commodity strategy, as the case may be. The sponsor of a commodity index or a commodity strategy will have no involvement in the offer and sale of the Shares and will have no obligation to any purchaser of such Shares. The sponsor of a commodity index or a commodity strategy, as the case may be, may take any actions in respect of such commodity index or such commodity strategy (including altering, discontinuing or suspending such index or strategy), as the case may be, without regard to the interests of the purchasers of the Shares, and any of these actions could adversely affect the market value of the Shares.

*A commodity index or a commodity strategy may include commodity contracts that are not traded on regulated futures exchanges*

A commodity index or commodity strategy, as the case may be, may not always include exclusively of regulated futures contracts and could at varying times include OTC contracts (such as swaps and forward contracts) traded on trading facilities that are subject to lesser degrees of regulation or, in some cases, no substantive regulation. As a

result, trading in such contracts, and the manner in which prices and volumes are reported by the relevant trading facilities, may not be subject to the same provisions of, and the protections afforded by, the U.S. Commodity Exchange Act of 1936, as amended, or other applicable statutes and related regulations, that govern trading on U.S. regulated futures exchanges or similar statutes and regulations that govern trading on regulated U.K. futures exchanges. In addition, many electronic trading facilities have only recently initiated trading and do not have significant trading histories. As a result, the trading of contracts on such facilities and the inclusion of such contracts in a commodity index or commodity strategy, as the case may be, may be subject to certain risks not presented by most U.S. or U.K. exchange-traded futures contracts, including risks related to the liquidity and price histories of the relevant contracts.

*Factors affecting the performance of commodity strategies only*

Although a commodity strategy is based on the same futures contracts underlying the commodity index on which it is based, its value and returns may differ from those of such commodity index. Although certain commodity Strategies are designed to capture certain fundamental commodity relationships, the relationships may or may not exist.

Commodity Strategies are based on commodity indices but have different rules from the commodity index governing the procedure by which expiring positions in certain of the constituent commodity contracts included in the commodity strategy are rolled forward into more distant contract expirations see "Exposure to "Rolling" and its impact on the performance of a Commodity Index" above. Holders of Shares of Portfolios that reference commodity Strategies should be aware that the risk factors relating to commodity indices apply to such Shares, but that the net asset value in respect of such Shares does not reflect the performance of the commodity index on which the relevant commodity strategy is based. In particular, the different rules governing the procedure by which expiring positions in certain of the constituent commodity contracts included in the commodity strategy are rolled forward into more distant contract expirations are likely to result in significant differences between the performance of the commodity strategy and the performance of the commodity index on which such commodity strategy is based since one component of the value of a commodity contract is the period remaining until its expiration.

*Trading and other transactions by the commodities index or strategy sponsor and/or third parties relating to the index or strategy or commodity futures contracts and their underlying commodities*

The index or strategy sponsor and/or its affiliates may actively trade futures contracts and options on futures contracts on the commodities that underlie the index or strategy, over-the-counter contracts on these commodities, the underlying commodities included in the index or strategy and other instruments and derivative products based on numerous other commodities. The index or strategy sponsor may also trade instruments and derivative products based on the index or strategy. In addition, the index or strategy sponsor may trade the contracts included in any benchmark index on which the index or strategy is based and that includes the same commodities as the index or strategy. Trading in the contracts on commodities included in the benchmark index or strategy, the underlying commodities and related over-the-counter products by the index or strategy sponsor and/or unaffiliated third parties could adversely affect the level of the index or strategy and therefore the value of the Shares of the Portfolio.

### Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

| Does this financial product have a sustainable investment objective?                                                                                                                                                                                                                                                                                                              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

## What environmental and/or social characteristics are promoted by this financial product?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The Investment Adviser implements an approach to Environmental, Social and Governance (ESG) considerations into its fundamental investment process which consists of exclusionary screens as set forth below (the "ESG Criteria").

As part of the ESG investment process, the Investment Adviser will avoid investing in companies that are, in the opinion of the Investment Adviser, directly engaged in, and/or deriving significant revenues from the following activities, which, as at the date of the Prospectus, include but are not limited to:

- controversial weapons (including nuclear weapons);
- extraction and/or production of certain fossil fuels (including thermal coal, oil sands, arctic oil and gas);
- tobacco;
- adult entertainment;
- for-profit prisons;
- civilian firearms

Information on the criteria applied when assessing the aforementioned revenues may be found at the following [link](#).

The Portfolio will also seek to exclude from its investment universe companies the Investment Adviser believes to be violating the United Nations Global Compact's ten principles (which are widely recognised corporate sustainability principles that meet fundamental responsibilities in the areas of human rights, labour, environment and anti-corruption). Please refer to the summary of the policy to assess good governance practices below for further detail.

Adherence to these ESG Criteria will be based on thresholds pre-determined by the Investment Adviser in its sole discretion and will be applied to proprietary data and/or data provided by one or more third party vendor(s). The Investment Adviser will rely on third-party data that it believes to be reliable, but it does not guarantee the accuracy of such third-party data. The Investment Adviser, in its sole discretion, retains the right to disapply data provided by third party vendors where it deems the data to be inaccurate or inappropriate. In some cases, data on specific companies may not be available or may be estimated by the Investment Adviser using internal processes or reasonable estimates. Potential omissions from the ESG Criteria may include but are not limited to newly listed companies to which a third party vendor may not yet have data mapped. In the course of gathering data, vendors may make certain value judgements. The Investment Adviser does not verify those judgements, nor quantify their impact upon its analysis. The Investment Adviser in its sole discretion may periodically update its screening process, amend the type of activities that are excluded for investment or revise the thresholds applicable to any such activities.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Portfolio.

***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

The following indicators are used to measure the attainment of the environmental and/or social characteristics promoted by the Portfolio:

- % of companies in the Portfolio deriving significant revenues from:
  - controversial weapons (including nuclear weapons);
  - extraction and/or production of certain fossil fuels (including thermal coal, oil sands, arctic oil and gas);
  - tobacco;
  - adult entertainment;
  - for-profit prisons;
  - civilian firearms
  
- % of companies in the Portfolio the Investment Adviser believes to be violating the United Nations Global Compact ten principles.

***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

This question is not applicable as the Portfolio does not commit to make sustainable investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

This question is not applicable as the Portfolio does not commit to make sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

***- How have the indicators for adverse impacts on sustainability factors been taken into account?***

Not applicable.

***- How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Not applicable.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

Yes, this Portfolio considers principal adverse impacts on sustainability factors (PAIs) across the environmental and/or social pillars. PAIs are taken into account qualitatively through the application of the binding ESG Criteria outlined above. On a non-binding and materiality basis, PAIs are also considered through firm-wide and investment team specific engagement. Additional information on which PAIs are taken into account are available on our website and will also be available in the Portfolio's annual report pursuant to SFDR Article 11.

☐ No

### **What investment strategy does this financial product follow?**

The investment strategy guides investment decisions based on factors such as investments objectives and risk tolerance.

The Investment Adviser implements the ESG Criteria on a binding basis into its investment process, as described above.

In addition to applying the ESG Criteria as set forth above, the Investment Adviser may integrate ESG factors with traditional fundamental factors as part of its fundamental research process to seek to assess overall business quality and valuation, as well as potential risks. Traditional fundamental factors that the Investment Adviser may consider include, but are not limited to, cash flows, balance sheet leverage, return on invested capital, industry dynamics, earnings quality and profitability. ESG factors that the Investment Adviser may consider include, but are not limited to, carbon intensity and emissions profiles, workplace health and safety, community impact, governance practices and stakeholder relations, employee relations, board structure, transparency and management incentives. The identification of a risk related to an ESG factor will not necessarily exclude a particular security and/or sector that, in the Investment Adviser's view, is otherwise suitable for investment. The relevance of specific traditional fundamental factors and ESG factors to the fundamental investment process varies across asset classes, sectors and strategies. The Investment Adviser may utilise data sources provided by third party vendors and/or engage directly with companies when assessing the above factors. The Investment Adviser employs a dynamic fundamental investment process that considers a wide range of factors, and no one factor or consideration is determinative.

Additionally, this Portfolio leverages the Goldman Sachs Asset Management Global Stewardship Team's engagement initiatives. The Goldman Sachs Asset Management Global Stewardship Team focuses on proactive, outcomes-based engagement, in an attempt to promote best practices. Engagement initiatives are continually reviewed, enhanced and monitored to ensure they incorporate current issues and evolving views about key environmental, social, and governance topics. To guide engagement efforts, the Goldman Sachs Asset Management Global Stewardship Team creates an annual Focus List, which reflects the Goldman Sachs Asset Management Global Stewardship Team's thematic priorities and guides voting and engagement efforts.

### ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

- The Portfolio implements the exclusionary screens as set forth in the ESG Criteria, further described above.

### ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The ESG Criteria is not designed to reduce investments considered prior to the application of this strategy by a committed minimum amount. The exclusionary screens are intended to ensure that issuers engaged in certain activities are entirely excluded from the Portfolio and is expected to remove between 0-5% of the Reference Portfolio/Benchmark.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

***What is the policy to assess good governance practices of the investee companies?***

The Portfolio leverages Goldman Sachs Asset Management's proprietary approach to identifying and evaluating global norms violators and issuers that may be engaged in poor governance practices, in particular with respect to sound management structures, employee relations, remuneration of staff and tax compliance.

This proprietary approach seeks to identify, review, evaluate and monitor companies that are flagged by external data providers as being in violation of, or otherwise not aligned with, the United Nation Global Compact (UNGC) principles, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights as well as companies that have received high controversy scores (including significant governance controversies, severe labour rights controversies and severe tax compliance controversies). Following review of these external data inputs, companies that the Investment Adviser believes to have an ongoing and serious violation and/or are considered to not be following good governance practices with insufficient remediation will be excluded from the Portfolio. This list of companies will be reviewed on at least a semi-annual basis. The Investment Adviser may not be able to readily sell securities that are intended for exclusion from the Portfolio based on this review (for example, due to liquidity issues or for other reasons outside of the Investment Manager's control), however, will seek to divest as soon as possible in an orderly manner and in the best interests of Shareholders.

## What is the asset allocation planned for this financial product?

**Asset allocation** describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

At least 90% of investments will be aligned to the environmental and/or social characteristics promoted by this Portfolio, as noted above. Up to 10% may be held in cash and derivatives.

**How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

This question is not applicable

## To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Portfolio does not currently commit to invest in any “sustainable investments” within the meaning of the EU Taxonomy and therefore its alignment with the Taxonomy is 0%. However, the position will be kept under review as the underlying rules are finalised and the availability of reliable data increases over time.

### Does the financial product invest in fossil gas and/or Nuclear energy related activities that comply with the EU Taxonomy?

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

\* For the purpose of these graphs, ‘sovereign bonds’ consist of all sovereign exposures

### What is the minimum share of investments in transitional and enabling activities?

As the Portfolio does not commit to invest any “sustainable investment” within the meaning of the EU Taxonomy, the minimum share of investments in transitional and enabling activities within the meaning of the EU Taxonomy is therefore also set at 0%.

<sup>1</sup>Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Portfolio promotes environmental and social characteristics but does not commit to making any sustainable investments. As a consequence, the Portfolio does not commit to a minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

**What is the minimum share of socially sustainable investments?**

This question is not applicable as the Portfolio does not commit to make socially sustainable investments.

**What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?**

Investments included under “#2 Other” include cash, cash equivalents and derivatives (including but not limited to index futures). These may be used to achieve the investment objective of the Portfolio but neither promote the environmental or social characteristics of the Portfolio, nor qualify as sustainable investments. The percentage shown is expected to be the maximum which may be held in these instruments but the actual percentage may vary from time to time.

These financial instruments are not subject to any minimum environmental or social safeguards.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

An index has not been designated as a reference benchmark to determine whether this financial product is aligned with the environmental or social characteristics that it promotes.

**Where can I find more product specific information online?**

More product-specific information can be found on the website:

[https://www.gsam.com/content/dam/gsam/pdfs/common/en/public/stewardship/Disclosure\\_Policy\\_Document.pdf?sa=n&rd=n](https://www.gsam.com/content/dam/gsam/pdfs/common/en/public/stewardship/Disclosure_Policy_Document.pdf?sa=n&rd=n)

## Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name:  
Goldman Sachs All China Equity Portfolio

### Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

| Does this financial product have a sustainable investment objective?                                                                                                                                                                                                                                                                                                              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

## What environmental and/or social characteristics are promoted by this financial product?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The Investment Adviser implements an approach to Environmental, Social and Governance (ESG) considerations into its fundamental investment process which consists of exclusionary screens as set forth below (the "ESG Criteria").

As part of the ESG investment process, the Investment Adviser will avoid investing in companies that are, in the opinion of the Investment Adviser, directly engaged in, and/or deriving significant revenues from the following activities, which, as at the date of the Prospectus, include but are not limited to:

- controversial weapons (including nuclear weapons);
- extraction and/or production of certain fossil fuels (including thermal coal, oil sands, arctic oil and gas);
- tobacco;
- adult entertainment;
- for-profit prisons;
- civilian firearms

Information on the criteria applied when assessing the aforementioned revenues may be found at the following [link](#).

The Portfolio will also seek to exclude from its investment universe companies the Investment Adviser believes to be violating the United Nations Global Compact's ten principles (which are widely recognised corporate sustainability principles that meet fundamental responsibilities in the areas of human rights, labour, environment and anti-corruption). Please refer to the summary of the policy to assess good governance practices below for further detail.

Adherence to these ESG Criteria will be based on thresholds pre-determined by the Investment Adviser in its sole discretion and will be applied to proprietary data and/or data provided by one or more third party vendor(s). The Investment Adviser will rely on third-party data that it believes to be reliable, but it does not guarantee the accuracy of such third-party data. The Investment Adviser, in its sole discretion, retains the right to disapply data provided by third party vendors where it deems the data to be inaccurate or inappropriate. In some cases, data on specific companies may not be available or may be estimated by the Investment Adviser using internal processes or reasonable estimates. Potential omissions from the ESG Criteria may include but are not limited to newly listed companies to which a third party vendor may not yet have data mapped. In the course of gathering data, vendors may make certain value judgements. The Investment Adviser does not verify those judgements, nor quantify their impact upon its analysis. The Investment Adviser in its sole discretion may periodically update its screening process, amend the type of activities that are excluded for investment or revise the thresholds applicable to any such activities.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Portfolio.

***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

The following indicators are used to measure the attainment of the environmental and/or social characteristics promoted by the Portfolio:

- % of companies in the Portfolio deriving significant revenues from:
  - controversial weapons (including nuclear weapons);
  - extraction and/or production of certain fossil fuels (including thermal coal, oil sands, arctic oil and gas);
  - tobacco;
  - adult entertainment;
  - for-profit prisons;
  - civilian firearms
  
- % of companies in the Portfolio the Investment Adviser believes to be violating the United Nations Global Compact ten principles.

***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

The consideration of investments made by the Portfolio as sustainable investments is determined by reference to the Investment Adviser's Sustainable Investment Framework, which includes an assessment as to whether the investment contributes to an environmental and/or social objective. Under this framework, an investment is considered to be contributing to an environmental and/or social objective via either a product or operational contribution.

Product contribution considers either i) the proportion of an issuer's revenue dedicated to an environmentally and/or socially sustainable impact category, ii) the alignment of a product to an environmental and/or social Sustainable Development Goal (SDG), iii) best-in-class scoring of an issue(r) as against environmental and/or social opportunities themes defined by an external data provider, or iv) the percentage of taxonomy aligned revenue of the issuer. Due to availability of reliable data, the taxonomy aligned revenue route will only be used as data improves.

Operational contribution takes a thematic approach, looking at the promotion of climate transition (environmental) within the operational framework of the issuer, inclusive growth (social) within the operational framework of the issuer, operational alignment to an environmental or social SDG, or the application of a best-in-class proprietary environmental and social score.

This Portfolio does not target a specific category of sustainable investments but assesses all investments made pursuant to its overall investment strategy using the Sustainable Investment Framework. Hence, the sustainable investments made by this Portfolio may contribute to a variety of environmental and/or social objectives of the sustainable investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

Issuers that are classified as contributing to a sustainable investment are also required to meet the do no significant harm (DNSH) criteria of the Investment Adviser's Sustainable Investment Framework. Any issuers that do not meet the DNSH test will not qualify as a sustainable investment. A proprietary quantitative or qualitative threshold for significant harm has been set for all 14 mandatory indicators relating to investee companies for adverse impacts on sustainability factors ("PAIs") set out in the regulatory technical standards supplementing SFDR.

Additionally, all issuers with a very severe controversy are considered to be causing significant harm and excluded from qualifying as a sustainable investment.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

**- How have the indicators for adverse impacts on sustainability factors been taken into account?**

This Portfolio considers principal adverse impacts on sustainability factors across environmental and social pillars. The PAIs are taken into account through the application of the DNSH principle outlined above for the determination of sustainable investments as well as qualitatively through the Portfolio's investment approach.

In regard to the consideration of the PAIs as part of the DNSH assessment of an issuer, as noted above a proprietary quantitative or qualitative threshold for significant harm has been set for all 14 mandatory PAIs relating to investee companies, and is assessed using information from an external data provider. These thresholds for significant harm have been set on a relative or absolute basis against each PAI depending on the Investment Adviser's assessment of the worst performing investments with respect to those PAIs. Where data is not available for a specific PAI a suitable proxy metric has been identified. If both PAI and proxy PAI data (where relevant) is not available and/or applicable to complete the DNSH assessment on an issuer, such issuer is generally excluded from qualifying as a sustainable investment.

Information on how the product considered principal adverse impacts on sustainability factors will be available in the Portfolio's Annual report.

**- How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

The Portfolio leverages Goldman Sachs Asset Management's proprietary approach to identifying and evaluating companies which, amongst other factors, are not considered to be aligned with global norms as further described below. Following this assessment, any companies which are considered to be in violation of these global norms (including the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights) will be excluded from qualifying as a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

Yes, this Portfolio considers principal adverse impacts on sustainability factors (PAIs) across the environmental and/or social pillars through the DNSH assessment, as outlined above. PAIs are also taken into account qualitatively through the application of the binding ESG Criteria and on a non-binding and materiality basis they are also considered through firm-wide and investment team specific engagement. Additional information on which PAIs are taken into account are available on our website and will also be available in the Portfolio's annual report pursuant to SFDR Article 11.

☐ No

## What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investments objectives and risk tolerance.

The Investment Adviser implements the ESG Criteria on a binding basis into its investment process, as described above.

In addition to applying the ESG Criteria as set forth above, the Investment Adviser may integrate ESG factors with traditional fundamental factors as part of its fundamental research process to seek to assess overall business quality and valuation, as well as potential risks. Traditional fundamental factors that the Investment Adviser may consider include, but are not limited to, cash flows, balance sheet leverage, return on invested capital, industry dynamics, earnings quality and profitability. ESG factors that the Investment Adviser may consider include, but are not limited to, carbon intensity and emissions profiles, workplace health and safety, community impact, governance practices and stakeholder relations, employee relations, board structure, transparency and management incentives. The identification of a risk related to an ESG factor will not necessarily exclude a particular security and/or sector that, in the Investment Adviser's view, is otherwise suitable for investment. The relevance of specific traditional fundamental factors and ESG factors to the fundamental investment process varies across asset classes, sectors and strategies. The Investment Adviser may utilise data sources provided by third party vendors and/or engage directly with companies when assessing the above factors. The Investment Adviser employs a dynamic fundamental investment process that considers a wide range of factors, and no one factor or consideration is determinative.

Additionally, this Portfolio leverages the Goldman Sachs Asset Management Global Stewardship Team's engagement initiatives. The Goldman Sachs Asset Management Global Stewardship Team focuses on proactive, outcomes-based engagement, in an attempt to promote best practices. Engagement initiatives are continually reviewed, enhanced and monitored to ensure they incorporate current issues and evolving views about key environmental, social, and governance topics. To guide engagement efforts, the Goldman Sachs Asset Management Global Stewardship Team creates an annual Focus List, which reflects the Goldman Sachs Asset Management Global Stewardship Team's thematic priorities and guides voting and engagement efforts.

## *What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?*

- The Portfolio implements the exclusionary screens as set forth in the ESG Criteria, further described above.

## *What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?*

The ESG Criteria is not designed to reduce investments considered prior to the application of this strategy by a committed minimum amount. The exclusionary screens are intended to ensure that issuers engaged in certain activities are entirely excluded from the Portfolio and is expected to remove between 0-5% of the Reference Portfolio/Benchmark.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

***What is the policy to assess good governance practices of the investee companies?***

The Portfolio leverages Goldman Sachs Asset Management's proprietary approach to identifying and evaluating global norms violators and issuers that may be engaged in poor governance practices, in particular with respect to sound management structures, employee relations, remuneration of staff and tax compliance.

This proprietary approach seeks to identify, review, evaluate and monitor companies that are flagged by external data providers as being in violation of, or otherwise not aligned with, the United Nation Global Compact (UNGC) principles, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights as well as companies that have received high controversy scores (including significant governance controversies, severe labour rights controversies and severe tax compliance controversies). Following review of these external data inputs, companies that the Investment Adviser believes to have an ongoing and serious violation and/or are considered to not be following good governance practices with insufficient remediation will be excluded from the Portfolio. This list of companies will be reviewed on at least a semi-annual basis. The Investment Adviser may not be able to readily sell securities that are intended for exclusion from the Portfolio based on this review (for example, due to liquidity issues or for other reasons outside of the Investment Manager's control), however, will seek to divest as soon as possible in an orderly manner and in the best interests of Shareholders.

## What is the asset allocation planned for this financial product?

**Asset allocation** describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

At least 90% of investments will be aligned to the environmental and/or social characteristics promoted by this Portfolio, as noted above. Up to 10% may be held in cash and cash equivalents and derivatives (including but not limited to index futures). This Portfolio also commits to holding a minimum of 10% in sustainable investments.

**How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

This question is not applicable

## To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Whilst this Portfolio intends to make sustainable investments, it does not take into account the EU criteria for environmentally sustainable economic activities within the meaning of the EU Taxonomy and therefore its portfolio alignment with such EU Taxonomy is 0%. However, the position will be kept under review as the underlying rules are finalised and the availability of reliable data increases over time.

As noted above, whether investments made by this product are sustainable investments is determined by reference to the Investment Adviser's Sustainable Investment Framework for assessing the contribution of investments to environmental and/or social objectives. This product does not target one specific category of sustainable investments, but instead assesses all investments made pursuant to its overall investment strategy using the framework.

## Does the financial product invest in fossil gas and/or Nuclear energy related activities that comply with the EU Taxonomy<sup>1</sup>?

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

## What is the minimum share of investments in transitional and enabling activities?

Whilst this Portfolio intends to make sustainable investments, it does not take into account the EU criteria for environmentally sustainable economic activities within the meaning of the EU Taxonomy.

<sup>1</sup>Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

Whilst this Sub-Fund intends to make sustainable investments, it does not specifically commit to a minimum proportion of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy. Hence, the minimum commitment is 0%.

**What is the minimum share of socially sustainable investments?**

Whilst this product intends to make sustainable investments, it does not specifically commit to a minimum proportion of socially sustainable investments. Hence, the minimum commitment is 0%.

As noted above, whether investments made by this product are sustainable investments is determined by reference to the Investment Adviser's Sustainable Investment Framework for assessing the contribution of investments to environmental and/or social objectives. This product does not target one specific category of sustainable investments, but instead assesses all investments made pursuant to its overall investment strategy using the framework.

**What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?**

Investments included under "#2 Other" include cash and cash equivalents for liquidity purposes and derivatives (including but not limited to index futures) for efficient portfolio management. These may be used to achieve the investment objective of the Portfolio but neither promote the environmental or social characteristics of the Portfolio, nor qualify as sustainable investments. The percentage shown is expected to be the maximum which may be held in these instruments but the actual percentage may vary from time to time.

These financial instruments are not subject to any minimum environmental or social safeguards.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

Not applicable

**Where can I find more product specific information online?**

### Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

| Does this financial product have a sustainable investment objective?                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

## What environmental and/or social characteristics are promoted by this financial product?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The Investment Adviser implements an approach to Environmental, Social and Governance (ESG) considerations into its fundamental investment process which consists of exclusionary screens as set forth below (the "ESG Criteria").

As part of the ESG investment process, the Investment Adviser will avoid investing in companies that are, in the opinion of the Investment Adviser, directly engaged in, and/or deriving significant revenues from the following activities, which, as at the date of the Prospectus, include but are not limited to:

- controversial weapons (including nuclear weapons);
- extraction and/or production of certain fossil fuels (including thermal coal, oil sands, arctic oil and gas);
- tobacco;
- alcohol;
- adult entertainment;
- for-profit prisons;
- civilian firearms;
- gambling

Information on the criteria applied when assessing the aforementioned revenues may be found at the following [link](#).

The Portfolio will also seek to exclude from its investment universe companies the Investment Adviser believes to be violating the United Nations Global Compact's ten principles (which are widely recognised corporate sustainability principles that meet fundamental responsibilities in the areas of human rights, labour, environment and anti-corruption). Please refer to the summary of the policy to assess good governance practices below for further detail.

Adherence to these ESG Criteria will be based on thresholds pre-determined by the Investment Adviser in its sole discretion and will be applied to proprietary data and/or data provided by one or more third party vendor(s). The Investment Adviser will rely on third-party data that it believes to be reliable, but it does not guarantee the accuracy of such third-party data. The Investment Adviser, in its sole discretion, retains the right to disapply data provided by third party vendors where it deems the data to be inaccurate or inappropriate. In some cases, data on specific companies may not be available or may be estimated by the Investment Adviser using internal processes or reasonable estimates. Potential omissions from the ESG Criteria may include but are not limited to newly listed companies to which a third party vendor may not yet have data mapped. In the course of gathering data, vendors may make certain value judgements. The Investment Adviser does not verify those judgements, nor quantify their impact upon its analysis. The Investment Adviser in its sole discretion may periodically update its screening process, amend the type of activities that are excluded for investment or revise the thresholds applicable to any such activities.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Portfolio.

***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

The following indicators are used to measure the attainment of the environmental and/or social characteristics promoted by the Portfolio:

- % of companies in the Portfolio deriving significant revenues from:
  - controversial weapons (including nuclear weapons);
  - extraction and/or production of certain fossil fuels (including thermal coal, oil sands, arctic oil and gas);
  - tobacco;
  - alcohol;
  - adult entertainment;
  - for-profit prisons;
  - civilian firearms;
  - gambling
  
- % of companies in the Portfolio the Investment Adviser believes to be violating the United Nations Global Compact ten principles.

***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

The consideration of investments made by the Portfolio as sustainable investments is determined by reference to the Investment Adviser's Sustainable Investment Framework, which includes an assessment as to whether the investment contributes to an environmental and/or social objective. Under this framework, an investment is considered to be contributing to an environmental and/or social objective via either a product or operational contribution.

Product contribution considers either i) the proportion of an issuer's revenue dedicated to an environmentally and/or socially sustainable impact category, ii) the alignment of a product to an environmental and/or social Sustainable Development Goal (SDG), iii) best-in-class scoring of an issue(r) as against environmental and/or social opportunities themes defined by an external data provider, or iv) the percentage of taxonomy aligned revenue of the issuer. Due to availability of reliable data, the taxonomy aligned revenue route will only be used as data improves.

Operational contribution takes a thematic approach, looking at the promotion of climate transition (environmental) within the operational framework of the issuer, inclusive growth (social) within the operational framework of the issuer, operational alignment to an environmental or social SDG, or the application of a best-in-class proprietary environmental and social score.

This Portfolio does not target a specific category of sustainable investments but assesses all investments made pursuant to its overall investment strategy using the Sustainable Investment Framework. Hence, the sustainable investments made by this Portfolio may contribute to a variety of environmental and/or social objectives of the sustainable investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

Issuers that are classified as contributing to a sustainable investment are also required to meet the do no significant harm (DNSH) criteria of the Investment Adviser's Sustainable Investment Framework. Any issuers that do not meet the DNSH test will not qualify as a sustainable investment. A proprietary quantitative or qualitative threshold for significant harm has been set for all 14 mandatory indicators relating to investee companies for adverse impacts on sustainability factors ("PAIs") set out in the regulatory technical standards supplementing SFDR.

Additionally, all issuers with a very severe controversy are considered to be causing significant harm and excluded from qualifying as a sustainable investment.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

***- How have the indicators for adverse impacts on sustainability factors been taken into account?***

This Portfolio considers principal adverse impacts on sustainability factors across environmental and social pillars. The PAIs are taken into account through the application of the DNSH principle outlined above for the determination of sustainable investments as well as qualitatively through the Portfolio's investment approach.

In regard to the consideration of the PAIs as part of the DNSH assessment of an issuer, as noted above a proprietary quantitative or qualitative threshold for significant harm has been set for all 14 mandatory PAIs relating to investee companies, and is assessed using information from an external data provider. These thresholds for significant harm have been set on a relative or absolute basis against each PAI depending on the Investment Adviser's assessment of the worst performing investments with respect to those PAIs. Where data is not available for a specific PAI a suitable proxy metric has been identified. If both PAI and proxy PAI data (where relevant) is not available and/or applicable to complete the DNSH assessment on an issuer, such issuer is generally excluded from qualifying as a sustainable investment.

Information on how the product considered principal adverse impacts on sustainability factors will be available in the Portfolio's Annual report.

***- How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The Portfolio leverages Goldman Sachs Asset Management's proprietary approach to identifying and evaluating companies which, amongst other factors, are not considered to be aligned with global norms as further described below. Following this assessment, any companies which are considered to be in violation of these global norms (including the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights) will be excluded from qualifying as a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

Yes, this Portfolio considers principal adverse impacts on sustainability factors (PAIs) across the environmental and/or social pillars through the DNSH assessment, as outlined above. PAIs are also taken into account qualitatively through the application of the binding ESG Criteria and on a non-binding and materiality basis they are also considered through firm-wide and investment team specific engagement. Additional information on which PAIs are taken into account are available on our website and will also be available in the Portfolio's annual report pursuant to SFDR Article 11.

☐ No

### **What investment strategy does this financial product follow?**

The investment strategy guides investment decisions based on factors such as investments objectives and risk tolerance.

The Investment Adviser implements the ESG Criteria on a binding basis into its investment process, as described above.

Once the Investment Adviser determines that a company meets the Portfolio's ESG Criteria as described above, the Investment Adviser conducts a supplemental analysis of individual companies' corporate governance factors and a range of environmental and social factors that may vary across asset classes, sectors and strategies. This supplemental analysis will be conducted alongside traditional fundamental, bottom-up financial analysis of individual companies, using traditional fundamental metrics. The Investment Adviser may engage in active dialogues with company management teams to further inform investment decision-making and to foster best corporate governance practices using its fundamental and ESG analysis. The Portfolio may invest in a company prior to completion of the supplemental analysis or without engaging with company management. Instances in which the supplemental analysis may not be completed prior to investment include but are not limited to IPOs, in-kind transfers, corporate actions, and/or certain short-term holdings. The Investment Adviser employs a dynamic fundamental investment process that considers a wide range of factors, and no one factor or consideration is determinative. The identification of a risk related to an ESG factor will not necessarily exclude a particular security and/or sector that, in the Investment Adviser's view, is otherwise suitable for investment. The relevance of specific traditional fundamental factors and ESG factors to the fundamental investment process varies across asset classes, sectors and strategies.

Additionally, this Portfolio leverages the Goldman Sachs Asset Management Global Stewardship Team's engagement initiatives. The Goldman Sachs Asset Management Global Stewardship Team focuses on proactive, outcomes-based engagement, in an attempt to promote best practices. Engagement initiatives are continually reviewed, enhanced and monitored to ensure they incorporate current issues and evolving views about key environmental, social, and governance topics. To guide engagement efforts, the Goldman Sachs Asset Management Global Stewardship Team creates an annual Focus List, which reflects the Goldman Sachs Asset Management Global Stewardship Team's thematic priorities and guides voting and engagement efforts.

### ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

- The Portfolio implements the exclusionary screens as set forth in the ESG Criteria, further described above.

### ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The ESG Criteria is not designed to reduce investments considered prior to the application of this strategy by a committed minimum amount. The exclusionary screens are intended to ensure that issuers engaged in certain activities are entirely excluded from the Portfolio and is expected to remove between 5-15% of the Reference Portfolio/Benchmark.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

***What is the policy to assess good governance practices of the investee companies?***

The Portfolio leverages Goldman Sachs Asset Management's proprietary approach to identifying and evaluating global norms violators and issuers that may be engaged in poor governance practices, in particular with respect to sound management structures, employee relations, remuneration of staff and tax compliance.

This proprietary approach seeks to identify, review, evaluate and monitor companies that are flagged by external data providers as being in violation of, or otherwise not aligned with, the United Nation Global Compact (UNGC) principles, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights as well as companies that have received high controversy scores (including significant governance controversies, severe labour rights controversies and severe tax compliance controversies). Following review of these external data inputs, companies that the Investment Adviser believes to have an ongoing and serious violation and/or are considered to not be following good governance practices with insufficient remediation will be excluded from the Portfolio. This list of companies will be reviewed on at least a semi-annual basis. The Investment Adviser may not be able to readily sell securities that are intended for exclusion from the Portfolio based on this review (for example, due to liquidity issues or for other reasons outside of the Investment Manager's control), however, will seek to divest as soon as possible in an orderly manner and in the best interests of Shareholders.

## What is the asset allocation planned for this financial product?

**Asset allocation** describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

At least 80% of investments will be aligned to the environmental and/or social characteristics promoted by this Portfolio, as noted above. Up to 20% may be held in cash and cash equivalents and derivatives (including but not limited to index futures). This Portfolio also commits to holding a minimum of 20% in sustainable investments.

**How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

This question is not applicable

## To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Whilst this Portfolio intends to make sustainable investments, it does not take into account the EU criteria for environmentally sustainable economic activities within the meaning of the EU Taxonomy and therefore its portfolio alignment with such EU Taxonomy is 0%. However, the position will be kept under review as the underlying rules are finalised and the availability of reliable data increases over time.

As noted above, whether investments made by this product are sustainable investments is determined by reference to the Investment Adviser's Sustainable Investment Framework for assessing the contribution of investments to environmental and/or social objectives. This product does not target one specific category of sustainable investments, but instead assesses all investments made pursuant to its overall investment strategy using the framework.

### Does the financial product invest in fossil gas and/or Nuclear energy related activities that comply with the EU Taxonomy<sup>1</sup>?

- ☐ Yes
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

### What is the minimum share of investments in transitional and enabling activities?

Whilst this Portfolio intends to make sustainable investments, it does not take into account the EU criteria for environmentally sustainable economic activities within the meaning of the EU Taxonomy.

<sup>1</sup>Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

Whilst this Sub-Fund intends to make sustainable investments, it does not specifically commit to a minimum proportion of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy. Hence, the minimum commitment is 0%.

**What is the minimum share of socially sustainable investments?**

Whilst this product intends to make sustainable investments, it does not specifically commit to a minimum proportion of socially sustainable investments. Hence, the minimum commitment is 0%.

As noted above, whether investments made by this product are sustainable investments is determined by reference to the Investment Adviser's Sustainable Investment Framework for assessing the contribution of investments to environmental and/or social objectives. This product does not target one specific category of sustainable investments, but instead assesses all investments made pursuant to its overall investment strategy using the framework.

**What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?**

Investments included under "#2 Other" include cash and cash equivalents for liquidity purposes and derivatives (including but not limited to index futures) for efficient portfolio management. These may be used to achieve the investment objective of the Portfolio but neither promote the environmental or social characteristics of the Portfolio, nor qualify as sustainable investments. The percentage shown is expected to be the maximum which may be held in these instruments but the actual percentage may vary from time to time.

These financial instruments are not subject to any minimum environmental or social safeguards.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

Not applicable

**Where can I find more product specific information online?**

## Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name:  
Goldman Sachs Emerging Markets Equity Portfolio

Legal entity identifier:  
EX3LFXCCOUFYOB4ZTY77

### Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

| Does this financial product have a sustainable investment objective?                                                                                                                                                                                                                                                                                                              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

## What environmental and/or social characteristics are promoted by this financial product?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The Investment Adviser implements an approach to Environmental, Social and Governance (ESG) considerations into its fundamental investment process which consists of exclusionary screens as set forth below (the "ESG Criteria").

As part of the ESG investment process, the Investment Adviser will avoid investing in companies that are, in the opinion of the Investment Adviser, directly engaged in, and/or deriving significant revenues from the following activities, which, as at the date of the Prospectus, include but are not limited to:

- controversial weapons (including nuclear weapons);
- extraction and/or production of certain fossil fuels (including thermal coal, oil sands, arctic oil and gas);
- tobacco;
- adult entertainment;
- for-profit prisons;
- civilian firearms

Information on the criteria applied when assessing the aforementioned revenues may be found at the following [link](#).

The Portfolio will also seek to exclude from its investment universe companies the Investment Adviser believes to be violating the United Nations Global Compact's ten principles (which are widely recognised corporate sustainability principles that meet fundamental responsibilities in the areas of human rights, labour, environment and anti-corruption). Please refer to the summary of the policy to assess good governance practices below for further detail.

Adherence to these ESG Criteria will be based on thresholds pre-determined by the Investment Adviser in its sole discretion and will be applied to proprietary data and/or data provided by one or more third party vendor(s). The Investment Adviser will rely on third-party data that it believes to be reliable, but it does not guarantee the accuracy of such third-party data. The Investment Adviser, in its sole discretion, retains the right to disapply data provided by third party vendors where it deems the data to be inaccurate or inappropriate. In some cases, data on specific companies may not be available or may be estimated by the Investment Adviser using internal processes or reasonable estimates. Potential omissions from the ESG Criteria may include but are not limited to newly listed companies to which a third party vendor may not yet have data mapped. In the course of gathering data, vendors may make certain value judgements. The Investment Adviser does not verify those judgements, nor quantify their impact upon its analysis. The Investment Adviser in its sole discretion may periodically update its screening process, amend the type of activities that are excluded for investment or revise the thresholds applicable to any such activities.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Portfolio.

***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

The following indicators are used to measure the attainment of the environmental and/or social characteristics promoted by the Portfolio:

- % of companies in the Portfolio deriving significant revenues from:
  - controversial weapons (including nuclear weapons);
  - extraction and/or production of certain fossil fuels (including thermal coal, oil sands, arctic oil and gas);
  - tobacco;
  - adult entertainment;
  - for-profit prisons;
  - civilian firearms
  
- % of companies in the Portfolio the Investment Adviser believes to be violating the United Nations Global Compact ten principles.

***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

The consideration of investments made by the Portfolio as sustainable investments is determined by reference to the Investment Adviser's Sustainable Investment Framework, which includes an assessment as to whether the investment contributes to an environmental and/or social objective. Under this framework, an investment is considered to be contributing to an environmental and/or social objective via either a product or operational contribution.

Product contribution considers either i) the proportion of an issuer's revenue dedicated to an environmentally and/or socially sustainable impact category, ii) the alignment of a product to an environmental and/or social Sustainable Development Goal (SDG), iii) best-in-class scoring of an issue(r) as against environmental and/or social opportunities themes defined by an external data provider, or iv) the percentage of taxonomy aligned revenue of the issuer. Due to availability of reliable data, the taxonomy aligned revenue route will only be used as data improves.

Operational contribution takes a thematic approach, looking at the promotion of climate transition (environmental) within the operational framework of the issuer, inclusive growth (social) within the operational framework of the issuer, operational alignment to an environmental or social SDG, or the application of a best-in-class proprietary environmental and social score.

This Portfolio does not target a specific category of sustainable investments but assesses all investments made pursuant to its overall investment strategy using the Sustainable Investment Framework. Hence, the sustainable investments made by this Portfolio may contribute to a variety of environmental and/or social objectives of the sustainable investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

Issuers that are classified as contributing to a sustainable investment are also required to meet the do no significant harm (DNSH) criteria of the Investment Adviser's Sustainable Investment Framework. Any issuers that do not meet the DNSH test will not qualify as a sustainable investment. A proprietary quantitative or qualitative threshold for significant harm has been set for all 14 mandatory indicators relating to investee companies for adverse impacts on sustainability factors ("PAIs") set out in the regulatory technical standards supplementing SFDR.

Additionally, all issuers with a very severe controversy are considered to be causing significant harm and excluded from qualifying as a sustainable investment.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

**- How have the indicators for adverse impacts on sustainability factors been taken into account?**

This Portfolio considers principal adverse impacts on sustainability factors across environmental and social pillars. The PAIs are taken into account through the application of the DNSH principle outlined above for the determination of sustainable investments as well as qualitatively through the Portfolio's investment approach.

In regard to the consideration of the PAIs as part of the DNSH assessment of an issuer, as noted above a proprietary quantitative or qualitative threshold for significant harm has been set for all 14 mandatory PAIs relating to investee companies, and is assessed using information from an external data provider. These thresholds for significant harm have been set on a relative or absolute basis against each PAI depending on the Investment Adviser's assessment of the worst performing investments with respect to those PAIs. Where data is not available for a specific PAI a suitable proxy metric has been identified. If both PAI and proxy PAI data (where relevant) is not available and/or applicable to complete the DNSH assessment on an issuer, such issuer is generally excluded from qualifying as a sustainable investment.

Information on how the product considered principal adverse impacts on sustainability factors will be available in the Portfolio's Annual report.

**- How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

The Portfolio leverages Goldman Sachs Asset Management's proprietary approach to identifying and evaluating companies which, amongst other factors, are not considered to be aligned with global norms as further described below. Following this assessment, any companies which are considered to be in violation of these global norms (including the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights) will be excluded from qualifying as a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

Yes, this Portfolio considers principal adverse impacts on sustainability factors (PAIs) across the environmental and/or social pillars through the DNSH assessment, as outlined above. PAIs are also taken into account qualitatively through the application of the binding ESG Criteria and on a non-binding and materiality basis they are also considered through firm-wide and investment team specific engagement. Additional information on which PAIs are taken into account are available on our website and will also be available in the Portfolio's annual report pursuant to SFDR Article 11.

☐ No

### **What investment strategy does this financial product follow?**

The investment strategy guides investment decisions based on factors such as investments objectives and risk tolerance.

The Investment Adviser implements the ESG Criteria on a binding basis into its investment process, as described above.

In addition to applying the ESG Criteria as set forth above, the Investment Adviser may integrate ESG factors with traditional fundamental factors as part of its fundamental research process to seek to assess overall business quality and valuation, as well as potential risks. Traditional fundamental factors that the Investment Adviser may consider include, but are not limited to, cash flows, balance sheet leverage, return on invested capital, industry dynamics, earnings quality and profitability. ESG factors that the Investment Adviser may consider include, but are not limited to, carbon intensity and emissions profiles, workplace health and safety, community impact, governance practices and stakeholder relations, employee relations, board structure, transparency and management incentives. The identification of a risk related to an ESG factor will not necessarily exclude a particular security and/or sector that, in the Investment Adviser's view, is otherwise suitable for investment. The relevance of specific traditional fundamental factors and ESG factors to the fundamental investment process varies across asset classes, sectors and strategies. The Investment Adviser may utilise data sources provided by third party vendors and/or engage directly with companies when assessing the above factors. The Investment Adviser employs a dynamic fundamental investment process that considers a wide range of factors, and no one factor or consideration is determinative.

Additionally, this Portfolio leverages the Goldman Sachs Asset Management Global Stewardship Team's engagement initiatives. The Goldman Sachs Asset Management Global Stewardship Team focuses on proactive, outcomes-based engagement, in an attempt to promote best practices. Engagement initiatives are continually reviewed, enhanced and monitored to ensure they incorporate current issues and evolving views about key environmental, social, and governance topics. To guide engagement efforts, the Goldman Sachs Asset Management Global Stewardship Team creates an annual Focus List, which reflects the Goldman Sachs Asset Management Global Stewardship Team's thematic priorities and guides voting and engagement efforts.

### ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

- The Portfolio implements the exclusionary screens as set forth in the ESG Criteria, further described above.

### ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The ESG Criteria is not designed to reduce investments considered prior to the application of this strategy by a committed minimum amount. The exclusionary screens are intended to ensure that issuers engaged in certain activities are entirely excluded from the Portfolio and is expected to remove between 0-5% of the Reference Portfolio/Benchmark.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

***What is the policy to assess good governance practices of the investee companies?***

The Portfolio leverages Goldman Sachs Asset Management's proprietary approach to identifying and evaluating global norms violators and issuers that may be engaged in poor governance practices, in particular with respect to sound management structures, employee relations, remuneration of staff and tax compliance.

This proprietary approach seeks to identify, review, evaluate and monitor companies that are flagged by external data providers as being in violation of, or otherwise not aligned with, the United Nation Global Compact (UNGC) principles, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights as well as companies that have received high controversy scores (including significant governance controversies, severe labour rights controversies and severe tax compliance controversies). Following review of these external data inputs, companies that the Investment Adviser believes to have an ongoing and serious violation and/or are considered to not be following good governance practices with insufficient remediation will be excluded from the Portfolio. This list of companies will be reviewed on at least a semi-annual basis. The Investment Adviser may not be able to readily sell securities that are intended for exclusion from the Portfolio based on this review (for example, due to liquidity issues or for other reasons outside of the Investment Manager's control), however, will seek to divest as soon as possible in an orderly manner and in the best interests of Shareholders.

## What is the asset allocation planned for this financial product?

**Asset allocation** describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

At least 90% of investments will be aligned to the environmental and/or social characteristics promoted by this Portfolio, as noted above. Up to 10% may be held in cash and cash equivalents and derivatives (including but not limited to index futures). This Portfolio also commits to holding a minimum of 10% in sustainable investments.

**How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

This question is not applicable

## To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Whilst this Portfolio intends to make sustainable investments, it does not take into account the EU criteria for environmentally sustainable economic activities within the meaning of the EU Taxonomy and therefore its portfolio alignment with such EU Taxonomy is 0%. However, the position will be kept under review as the underlying rules are finalised and the availability of reliable data increases over time.

As noted above, whether investments made by this product are sustainable investments is determined by reference to the Investment Adviser's Sustainable Investment Framework for assessing the contribution of investments to environmental and/or social objectives. This product does not target one specific category of sustainable investments, but instead assesses all investments made pursuant to its overall investment strategy using the framework.

## Does the financial product invest in fossil gas and/or Nuclear energy related activities that comply with the EU Taxonomy<sup>1</sup>?

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

## What is the minimum share of investments in transitional and enabling activities?

Whilst this Portfolio intends to make sustainable investments, it does not take into account the EU criteria for environmentally sustainable economic activities within the meaning of the EU Taxonomy.

<sup>1</sup>Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

Whilst this Sub-Fund intends to make sustainable investments, it does not specifically commit to a minimum proportion of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy. Hence, the minimum commitment is 0%.

**What is the minimum share of socially sustainable investments?**

Whilst this product intends to make sustainable investments, it does not specifically commit to a minimum proportion of socially sustainable investments. Hence, the minimum commitment is 0%.

As noted above, whether investments made by this product are sustainable investments is determined by reference to the Investment Adviser's Sustainable Investment Framework for assessing the contribution of investments to environmental and/or social objectives. This product does not target one specific category of sustainable investments, but instead assesses all investments made pursuant to its overall investment strategy using the framework.

**What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?**

Investments included under “#2 Other” include cash and cash equivalents for liquidity purposes and derivatives (including but not limited to index futures) for efficient portfolio management. These may be used to achieve the investment objective of the Portfolio but neither promote the environmental or social characteristics of the Portfolio, nor qualify as sustainable investments. The percentage shown is expected to be the maximum which may be held in these instruments but the actual percentage may vary from time to time.

These financial instruments are not subject to any minimum environmental or social safeguards.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

Not applicable

**Where can I find more product specific information online?**

### Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

| Does this financial product have a sustainable investment objective?                                                                                                                                                                                                                                                                                                              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

## What environmental and/or social characteristics are promoted by this financial product?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The Investment Adviser implements an approach to Environmental, Social and Governance (ESG) considerations into its fundamental investment process which consists of exclusionary screens as set forth below (the "ESG Criteria").

As part of the ESG investment process, the Investment Adviser will avoid investing in companies that are, in the opinion of the Investment Adviser, directly engaged in, and/or deriving significant revenues from the following activities, which, as at the date of the Prospectus, include but are not limited to:

- controversial weapons (including nuclear weapons);
- extraction and/or production of certain fossil fuels (including thermal coal, oil sands, arctic oil and gas);
- tobacco;
- adult entertainment;
- for-profit prisons;
- civilian firearms

Information on the criteria applied when assessing the aforementioned revenues may be found at the following [link](#).

The Portfolio will also seek to exclude from its investment universe companies the Investment Adviser believes to be violating the United Nations Global Compact's ten principles (which are widely recognised corporate sustainability principles that meet fundamental responsibilities in the areas of human rights, labour, environment and anti-corruption). Please refer to the summary of the policy to assess good governance practices below for further detail.

Adherence to these ESG Criteria will be based on thresholds pre-determined by the Investment Adviser in its sole discretion and will be applied to proprietary data and/or data provided by one or more third party vendor(s). The Investment Adviser will rely on third-party data that it believes to be reliable, but it does not guarantee the accuracy of such third-party data. The Investment Adviser, in its sole discretion, retains the right to disapply data provided by third party vendors where it deems the data to be inaccurate or inappropriate. In some cases, data on specific companies may not be available or may be estimated by the Investment Adviser using internal processes or reasonable estimates. Potential omissions from the ESG Criteria may include but are not limited to newly listed companies to which a third party vendor may not yet have data mapped. In the course of gathering data, vendors may make certain value judgements. The Investment Adviser does not verify those judgements, nor quantify their impact upon its analysis. The Investment Adviser in its sole discretion may periodically update its screening process, amend the type of activities that are excluded for investment or revise the thresholds applicable to any such activities.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Portfolio.

***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

The following indicators are used to measure the attainment of the environmental and/or social characteristics promoted by the Portfolio:

- % of companies in the Portfolio deriving significant revenues from:
  - controversial weapons (including nuclear weapons);
  - extraction and/or production of certain fossil fuels (including thermal coal, oil sands, arctic oil and gas);
  - tobacco;
  - adult entertainment;
  - for-profit prisons;
  - civilian firearms
  
- % of companies in the Portfolio the Investment Adviser believes to be violating the United Nations Global Compact ten principles.

***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

The consideration of investments made by the Portfolio as sustainable investments is determined by reference to the Investment Adviser's Sustainable Investment Framework, which includes an assessment as to whether the investment contributes to an environmental and/or social objective. Under this framework, an investment is considered to be contributing to an environmental and/or social objective via either a product or operational contribution.

Product contribution considers either i) the proportion of an issuer's revenue dedicated to an environmentally and/or socially sustainable impact category, ii) the alignment of a product to an environmental and/or social Sustainable Development Goal (SDG), iii) best-in-class scoring of an issue(r) as against environmental and/or social opportunities themes defined by an external data provider, or iv) the percentage of taxonomy aligned revenue of the issuer. Due to availability of reliable data, the taxonomy aligned revenue route will only be used as data improves.

Operational contribution takes a thematic approach, looking at the promotion of climate transition (environmental) within the operational framework of the issuer, inclusive growth (social) within the operational framework of the issuer, operational alignment to an environmental or social SDG, or the application of a best-in-class proprietary environmental and social score.

This Portfolio does not target a specific category of sustainable investments but assesses all investments made pursuant to its overall investment strategy using the Sustainable Investment Framework. Hence, the sustainable investments made by this Portfolio may contribute to a variety of environmental and/or social objectives of the sustainable investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

Issuers that are classified as contributing to a sustainable investment are also required to meet the do no significant harm (DNSH) criteria of the Investment Adviser's Sustainable Investment Framework. Any issuers that do not meet the DNSH test will not qualify as a sustainable investment. A proprietary quantitative or qualitative threshold for significant harm has been set for all 14 mandatory indicators relating to investee companies for adverse impacts on sustainability factors ("PAIs") set out in the regulatory technical standards supplementing SFDR.

Additionally, all issuers with a very severe controversy are considered to be causing significant harm and excluded from qualifying as a sustainable investment.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

**- How have the indicators for adverse impacts on sustainability factors been taken into account?**

This Portfolio considers principal adverse impacts on sustainability factors across environmental and social pillars. The PAIs are taken into account through the application of the DNSH principle outlined above for the determination of sustainable investments as well as qualitatively through the Portfolio's investment approach.

In regard to the consideration of the PAIs as part of the DNSH assessment of an issuer, as noted above a proprietary quantitative or qualitative threshold for significant harm has been set for all 14 mandatory PAIs relating to investee companies, and is assessed using information from an external data provider. These thresholds for significant harm have been set on a relative or absolute basis against each PAI depending on the Investment Adviser's assessment of the worst performing investments with respect to those PAIs. Where data is not available for a specific PAI a suitable proxy metric has been identified. If both PAI and proxy PAI data (where relevant) is not available and/or applicable to complete the DNSH assessment on an issuer, such issuer is generally excluded from qualifying as a sustainable investment.

Information on how the product considered principal adverse impacts on sustainability factors will be available in the Portfolio's Annual report.

**- How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

The Portfolio leverages Goldman Sachs Asset Management's proprietary approach to identifying and evaluating companies which, amongst other factors, are not considered to be aligned with global norms as further described below. Following this assessment, any companies which are considered to be in violation of these global norms (including the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights) will be excluded from qualifying as a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

Yes, this Portfolio considers principal adverse impacts on sustainability factors (PAIs) across the environmental and/or social pillars through the DNSH assessment, as outlined above. PAIs are also taken into account qualitatively through the application of the binding ESG Criteria and on a non-binding and materiality basis they are also considered through firm-wide and investment team specific engagement. Additional information on which PAIs are taken into account are available on our website and will also be available in the Portfolio's annual report pursuant to SFDR Article 11.

☐ No

### **What investment strategy does this financial product follow?**

The investment strategy guides investment decisions based on factors such as investments objectives and risk tolerance.

The Investment Adviser implements the ESG Criteria on a binding basis into its investment process, as described above.

In addition to applying the ESG Criteria as set forth above, the Investment Adviser may integrate ESG factors with traditional fundamental factors as part of its fundamental research process to seek to assess overall business quality and valuation, as well as potential risks. Traditional fundamental factors that the Investment Adviser may consider include, but are not limited to, cash flows, balance sheet leverage, return on invested capital, industry dynamics, earnings quality and profitability. ESG factors that the Investment Adviser may consider include, but are not limited to, carbon intensity and emissions profiles, workplace health and safety, community impact, governance practices and stakeholder relations, employee relations, board structure, transparency and management incentives. The identification of a risk related to an ESG factor will not necessarily exclude a particular security and/or sector that, in the Investment Adviser's view, is otherwise suitable for investment. The relevance of specific traditional fundamental factors and ESG factors to the fundamental investment process varies across asset classes, sectors and strategies. The Investment Adviser may utilise data sources provided by third party vendors and/or engage directly with companies when assessing the above factors. The Investment Adviser employs a dynamic fundamental investment process that considers a wide range of factors, and no one factor or consideration is determinative.

Additionally, this Portfolio leverages the Goldman Sachs Asset Management Global Stewardship Team's engagement initiatives. The Goldman Sachs Asset Management Global Stewardship Team focuses on proactive, outcomes-based engagement, in an attempt to promote best practices. Engagement initiatives are continually reviewed, enhanced and monitored to ensure they incorporate current issues and evolving views about key environmental, social, and governance topics. To guide engagement efforts, the Goldman Sachs Asset Management Global Stewardship Team creates an annual Focus List, which reflects the Goldman Sachs Asset Management Global Stewardship Team's thematic priorities and guides voting and engagement efforts.

### ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

- The Portfolio implements the exclusionary screens as set forth in the ESG Criteria, further described above.

### ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The ESG Criteria is not designed to reduce investments considered prior to the application of this strategy by a committed minimum amount. The exclusionary screens are intended to ensure that issuers engaged in certain activities are entirely excluded from the Portfolio and is expected to remove between 0-5% of the Reference Portfolio/Benchmark.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

***What is the policy to assess good governance practices of the investee companies?***

The Portfolio leverages Goldman Sachs Asset Management's proprietary approach to identifying and evaluating global norms violators and issuers that may be engaged in poor governance practices, in particular with respect to sound management structures, employee relations, remuneration of staff and tax compliance.

This proprietary approach seeks to identify, review, evaluate and monitor companies that are flagged by external data providers as being in violation of, or otherwise not aligned with, the United Nation Global Compact (UNGC) principles, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights as well as companies that have received high controversy scores (including significant governance controversies, severe labour rights controversies and severe tax compliance controversies). Following review of these external data inputs, companies that the Investment Adviser believes to have an ongoing and serious violation and/or are considered to not be following good governance practices with insufficient remediation will be excluded from the Portfolio. This list of companies will be reviewed on at least a semi-annual basis. The Investment Adviser may not be able to readily sell securities that are intended for exclusion from the Portfolio based on this review (for example, due to liquidity issues or for other reasons outside of the Investment Manager's control), however, will seek to divest as soon as possible in an orderly manner and in the best interests of Shareholders.

At least 90% of investments will be aligned to the environmental and/or social characteristics promoted by this Portfolio, as noted above. Up to 10% may be held in cash and cash equivalents and derivatives (including but not limited to index futures). This Portfolio also commits to holding a minimum of 10% in sustainable investments.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

This question is not applicable

## To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Whilst this Portfolio intends to make sustainable investments, it does not take into account the EU criteria for environmentally sustainable economic activities within the meaning of the EU Taxonomy and therefore its portfolio alignment with such EU Taxonomy is 0%. However, the position will be kept under review as the underlying rules are finalised and the availability of reliable data increases over time.

As noted above, whether investments made by this product are sustainable investments is determined by reference to the Investment Adviser's Sustainable Investment Framework for assessing the contribution of investments to environmental and/or social objectives. This product does not target one specific category of sustainable investments, but instead assesses all investments made pursuant to its overall investment strategy using the framework.

## Does the financial product invest in fossil gas and/or Nuclear energy related activities that comply with the EU Taxonomy<sup>1</sup>?

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

## What is the minimum share of investments in transitional and enabling activities?

Whilst this Portfolio intends to make sustainable investments, it does not take into account the EU criteria for environmentally sustainable economic activities within the meaning of the EU Taxonomy.

<sup>1</sup>Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

Whilst this Sub-Fund intends to make sustainable investments, it does not specifically commit to a minimum proportion of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy. Hence, the minimum commitment is 0%.

**What is the minimum share of socially sustainable investments?**

Whilst this product intends to make sustainable investments, it does not specifically commit to a minimum proportion of socially sustainable investments. Hence, the minimum commitment is 0%.

As noted above, whether investments made by this product are sustainable investments is determined by reference to the Investment Adviser's Sustainable Investment Framework for assessing the contribution of investments to environmental and/or social objectives. This product does not target one specific category of sustainable investments, but instead assesses all investments made pursuant to its overall investment strategy using the framework.

**What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?**

Investments included under “#2 Other” include cash and cash equivalents for liquidity purposes and derivatives (including but not limited to index futures) for efficient portfolio management. These may be used to achieve the investment objective of the Portfolio but neither promote the environmental or social characteristics of the Portfolio, nor qualify as sustainable investments. The percentage shown is expected to be the maximum which may be held in these instruments but the actual percentage may vary from time to time.

These financial instruments are not subject to any minimum environmental or social safeguards.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

Not applicable

**Where can I find more product specific information online?**

Product name:  
Goldman Sachs Global Environmental Impact Equity  
Portfolio

Legal entity identifier:  
549300K2E2ZKUPXPFF25

### Sustainable investment objective

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

| Does this financial product have a sustainable investment objective?                                                                                                                                                                                                                                                                                                                                  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

## What is the sustainable investment objective of this financial product?

**Sustainability indicators** measure how the sustainable objectives of this financial product are attained.

The Portfolio seeks to create positive environmental impact by investing in companies that the Investment Advisor considers to be sustainable investments and which provide solutions that drive environmental sustainability, by virtue of their alignment to key themes associated with solving environmental problems. The key themes are represented by companies that, in the Investment Adviser's view, provide, invest in or help create products, services or technologies in areas including but not limited to:

- Clean Energy: present in areas such as solar energy, wind energy, bioenergy, energy storage, grid services and carbon sequestration.
- Resource Efficiency: present in areas such as electric and autonomous vehicles, sustainable manufacturing, logistics and smart cities.
- Sustainable Consumption: present in areas such as agriculture, food, tourism and fashion.
- Circular Economy: present in areas such as recycling and reuse, waste management and single-use substitution.
- Water Sustainability: present in areas such as water treatment, water distribution and desalination.

Each individual investment will be required to demonstrate alignment to one (or more) of these key themes in accordance with the Investment Adviser's assessment.

The Portfolio will seek to maintain alignment to these themes on an ongoing basis.

Alignment with the key themes is generally assessed by the Investment Adviser at the time of initial purchase and will entail an assessment of the proportion of an issuer's sustainable impact revenue, as well as consideration of additional financial and non-financial indicators that significantly contribute to solving environmental problems such as capital expenditure, intrinsic value, research and development expenditure, future growth and corporate strategy, amongst others. Information on the criteria applied when assessing the aforementioned revenues may be found at the following [link](#).

The Investment Adviser's assessment may be informed by, among other things, company disclosure, third-party research, engagement with the companies, or subjective criteria including the Investment Adviser's own research, expectations, or opinions.

Selected investments will also be assessed on environmental impact metrics and the Portfolio will report the aggregate contribution of companies held within the Portfolio to environmental impact key performance indicators on an annual basis.

If the Investment Adviser considers that any Portfolio investments no longer adhere to its environmental criteria, it will take appropriate remedial steps which may include (without limitation) engaging with investee companies, enhanced monitoring, identifying alternative or additional investments, and/or determining disposition of the applicable Portfolio investments.

The Investment Adviser will also avoid investing in companies that are, in the opinion of the Investment Adviser, directly engaged in, and/or deriving significant revenues from the following activities:

- extraction and/or production of certain fossil fuels (including thermal coal, oil sands, arctic oil and gas);
- tobacco;
- alcohol;
- adult entertainment;
- for-profit prisons;
- civilian firearms;
- gambling

The Portfolio will exclude from its investment universe companies that are, directly engaged in, and/or deriving any revenues from controversial weapons (including nuclear weapons).

Information on the criteria applied when assessing the aforementioned revenues may be found at the following [link](#).

The Portfolio will also seek to exclude from its investment universe companies the Investment Adviser believes to be violating the United Nations Global Compact's ten principles (which are widely recognised corporate sustainability principles that meet fundamental responsibilities in the areas of human rights, labour, environment and anti-corruption). Please refer to the summary of the policy to assess good governance practices below for further detail.

Adherence to these ESG characteristics will be based on thresholds pre-determined by the Investment Adviser in its sole discretion and applying such thresholds to proprietary data and/or data provided by one or more third party vendor(s). The Investment Adviser will rely on third-party data that it believes to be reliable, but it does not guarantee the accuracy of such third-party data. The Investment Adviser, in its sole discretion, retains the right to disapply data provided by third party vendors where it deems the data to be inaccurate or inappropriate. In some cases, data on specific companies may not be available or may be estimated by the Investment Adviser using internal processes or reasonable estimates. Potential omissions from the ESG criteria may include but are not limited to newly listed companies to which a third party vendor may not yet have data mapped. In the course of gathering data, vendors may make certain value judgements. The Investment Adviser does not verify those judgements, nor quantify their impact upon its analysis.

The Investment Adviser in its sole discretion may periodically update its screening process, amend the type of activities that are excluded for investment or revise the thresholds applicable to any such activities.

***What sustainability indicators are used to measure the attainment of the sustainable investment objective of this financial product?***

- % of companies in the Portfolio demonstrating material alignment to one or more of the key themes according to the Investment Adviser's assessment as noted above.
- Aggregate contribution of companies held in the Portfolio to environmental impact key performance indicators that include, but are not limited to, installed renewable energy capacity, tons of CO2 avoided/saved (net), tons of waste reduced, tons of material recycled/treated, litres of water saved/treated.
- % of companies in the Portfolio deriving significant revenues from:
  - extraction and/or production of certain fossil fuels (including thermal coal, oil sands, arctic oil and gas);
  - tobacco;
  - alcohol;
  - adult entertainment;
  - for-profit prisons;
  - civilian firearms;
  - gambling.
- % of companies in the Portfolio the Investment Adviser believes to be violating the United Nations Global Compact ten principles.
- % of companies in the Portfolio determined to meet the Investment Advisor's sustainable impact revenue threshold.

***How do sustainable investments not cause significant harm to any environmental or social sustainable investment objective?***

Issuers that are classified as contributing to a sustainable investment are also required to meet the do no significant harm (DNSH) criteria of the Investment Adviser's Sustainable Investment Framework. Any issuers that do not meet the DNSH test will not qualify as a sustainable investment. A proprietary quantitative or qualitative threshold for significant harm has been set for all 14 mandatory indicators relating to investee companies for adverse impacts on sustainability factors ("PAIs") set out in the regulatory technical standards supplementing SFDR.

Additionally, all issuers with a very severe controversy are considered to be causing significant harm and excluded from qualifying as a sustainable investment.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

***- How have the indicators for adverse impacts on sustainability factors been taken into account?***

This Portfolio considers principal adverse impacts on sustainability factors across environmental and social pillars. The PAIs are taken into account through the application of the DNSH principle outlined above for the determination of sustainable investments as well as qualitatively through the Portfolio's investment approach.

In regard to the consideration of the PAIs as part of the DNSH assessment of an issuer, as noted above a proprietary quantitative or qualitative threshold for significant harm has been set for all 14 mandatory PAIs relating to investee companies, and is assessed using information from an external data provider. These thresholds for significant harm have been set on a relative or absolute basis against each PAI depending on the Investment Adviser's assessment of the worst performing investments with respect to those PAIs. Where data is not available for a specific PAI a suitable proxy metric has been identified. If both PAI and proxy PAI data (where relevant) is not available and/or applicable to complete the DNSH assessment on an issuer, such issuer is generally excluded from qualifying as a sustainable investment.

Information on how the product considered principal adverse impacts on sustainability factors will be available in the Portfolio's Annual report.

***- How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?***

The Portfolio leverages Goldman Sachs Asset Management's proprietary approach to identifying and evaluating companies which, amongst other factors, are not considered to be aligned with global norms as further described below. Following this assessment, any companies which are considered to be in violation of these global norms (including the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights) will be excluded from qualifying as a sustainable investment.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

Yes, this Portfolio considers principal adverse impacts on sustainability factors (PAIs) across the environmental and/or social pillars through the DNSH assessment, as outlined above. PAIs are also taken into account qualitatively through the application of the binding ESG Criteria and on a non-binding and materiality basis they are also considered through firm-wide and investment team specific engagement. Additional information on which PAIs are taken into account are available on our website and will also be available in the Portfolio's annual report pursuant to SFDR Article 11.

☐ No

## What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investments objectives and risk tolerance.

The Investment Adviser implements ESG criteria on a binding basis into its investment process, as described above. under the environmental and/or social characteristics promoted by this Portfolio.

Once the Investment Adviser determines that a company meets the Portfolio's ESG Criteria as described above, the Investment Adviser conducts a supplemental analysis of individual companies' corporate governance factors and a range of environmental and social factors that may vary across asset classes, sectors and strategies. This supplemental analysis will be conducted alongside traditional fundamental, bottom-up financial analysis of individual companies, using traditional fundamental metrics. The Investment Adviser may engage in active dialogues with company management teams to further inform investment decision-making and to foster best corporate governance practices using its fundamental and ESG analysis. The Portfolio may invest in a company prior to completion of the supplemental analysis or without engaging with company management. Instances in which the supplemental analysis may not be completed prior to investment include but are not limited to IPOs, in-kind transfers, corporate actions, and/or certain short-term holdings. The Investment Adviser employs a dynamic fundamental investment process that considers a wide range of factors, and no one factor or consideration is determinative. The identification of a risk related to an ESG factor will not necessarily exclude a particular security and/or sector that, in the Investment Adviser's view, is otherwise suitable for investment. The relevance of specific traditional fundamental factors and ESG factors to the fundamental investment process varies across asset classes, sectors and strategies.

Additionally, this Portfolio leverages the Goldman Sachs Asset Management Global Stewardship Team's engagement initiatives. The Goldman Sachs Asset Management Global Stewardship Team focuses on proactive, outcomes-based engagement, in an attempt to promote best practices. Engagement initiatives are continually reviewed, enhanced and monitored to ensure they incorporate current issues and evolving views about key environmental, social, and governance topics. To guide engagement efforts, the Goldman Sachs Asset Management Global Stewardship Team creates an annual Focus List, which reflects the Goldman Sachs Asset Management Global Stewardship Team's thematic priorities and guides voting and engagement efforts.

### ***What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?***

- Alignment of investee companies to key themes associated with solving environmental problems including, but not limited to, clean energy, resource efficiency, sustainable consumption, circular economy and water sustainability.
- Aggregate contribution of companies held within the portfolio to environmental impact key performance indicators, as defined by the Investment Adviser.
- Revenue or value-based exclusions that prevent investments into certain activities.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

***What is the policy to assess good governance practices of the investee companies?***

The Portfolio leverages Goldman Sachs Asset Management's proprietary approach to identifying and evaluating global norms violators and issuers that may be engaged in poor governance practices, in particular with respect to sound management structures, employee relations, remuneration of staff and tax compliance.

This proprietary approach seeks to identify, review, evaluate and monitor companies that are flagged by external data providers as being in violation of, or otherwise not aligned with, the United Nation Global Compact (UNGC) principles, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights as well companies that have received high controversy scores (including significant governance controversies, severe labour rights controversies and severe tax compliance controversies). Following review of these external data inputs, companies that the Investment Adviser considers to have an ongoing and serious violation and/or are considered to not be following good governance practices with insufficient remediation will be considered as sustainable investments. This list of companies will be reviewed on a semi-annual basis. The Investment Adviser may not be able to readily sell securities that are intended for exclusion from the Portfolio at each semi-annual review (for example, due to liquidity issues or for other reasons outside of the Investment Manager's control), however, will seek to divest as soon as possible in an orderly manner and in the best interests of Shareholders.

## What is the asset allocation and the minimum share of sustainable investments?

**Asset allocation** describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

This Portfolio commits to holding a minimum of 90% of its assets in sustainable investments. Up to 10% of the Portfolio's assets may be held in cash and cash equivalents and derivatives (including but not limited to index futures used for the purpose of cash management), which in exceptional circumstances might be exceeded. In such circumstances the asset allocation would be brought back to the levels stated above as soon as practicable and in the best interests of investors.

**How does the use of derivatives attain the sustainable investment objective?**

Not applicable.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

## To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Whilst this Portfolio intends to make sustainable investments, it does not take into account the EU criteria for environmentally sustainable economic activities within the meaning of the EU Taxonomy and therefore its portfolio alignment with such EU Taxonomy is 0%. However, the position will be kept under review as the underlying rules are finalised and the availability of reliable data increases over time.

As noted above, whether investments made by this product are sustainable investments is determined by reference to the Investment Adviser's Sustainable Investment Framework for assessing the contribution of investments to environmental and/or social objectives. This product does not target one specific category of sustainable investments, but instead assesses all investments made pursuant to its overall investment strategy using the framework

## Does the financial product invest in fossil gas and/or Nuclear energy related activities that comply with the EU Taxonomy?

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

## What is the minimum share of investments in transitional and enabling activities?

The minimum share of investments in transitional and enabling activities within the meaning of the EU Taxonomy is 0%.

<sup>1</sup>Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are environmentally sustainable investments that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Portfolio commits to holding a minimum of 90% of its assets in sustainable investments. These investments could be aligned with the EU Taxonomy but the Investment Adviser is not currently in a position to specify the exact proportion of the Portfolio's investments which take into account the EU criteria for environmentally sustainable economic activities. However, the position is kept under review as the rules are finalized and the availability of reliable data increases over time.

**What is the minimum share of sustainable investments with a social objective?**

Whilst this product intends to make sustainable investments, it does not specifically commit to a minimum proportion of socially sustainable investments. Hence, the minimum commitment is 0%.

**What investments are included under “#2 Not sustainable”, what is their purpose and are there any minimum environmental or social safeguards?**

Investments included under “#2 Other” include cash and cash equivalents for liquidity purposes and derivatives (including but not limited to index futures) for the purpose of cash management. These may be used to achieve the investment objective of the Portfolio but neither promote the environmental or social characteristics of the Portfolio, nor qualify as sustainable investments. The percentage shown is expected to be the maximum which may be held in these instruments but the actual percentage may vary from time to time.

These financial instruments are not subject to any minimum environmental or social safeguards.

**Is a specific index designated as a reference benchmark to meet the sustainable investment objective?**

Not applicable.

**Where can I find more product specific information online?**

More product-specific information can be found on the website:

## Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name:  
Goldman Sachs Global Equity Income Portfolio

Legal entity identifier:  
8Q222CN07ZPSMAHLWD98

### Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

| Does this financial product have a sustainable investment objective?                                                                                                                                                                                                                                                                                                              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

## What environmental and/or social characteristics are promoted by this financial product?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The Investment Adviser implements an approach to Environmental, Social and Governance (ESG) considerations into its fundamental investment process which consists of exclusionary screens as set forth below (the "ESG Criteria").

As part of the ESG investment process, the Investment Adviser will avoid investing in companies that are, in the opinion of the Investment Adviser, directly engaged in, and/or deriving significant revenues from the following activities, which, as at the date of the Prospectus, include but are not limited to:

- controversial weapons (including nuclear weapons);
- extraction and/or production of certain fossil fuels (including thermal coal, oil sands, arctic oil and gas);
- tobacco;
- adult entertainment;
- for-profit prisons;
- civilian firearms

Information on the criteria applied when assessing the aforementioned revenues may be found at the following [link](#).

The Portfolio will also seek to exclude from its investment universe companies the Investment Adviser believes to be violating the United Nations Global Compact's ten principles (which are widely recognised corporate sustainability principles that meet fundamental responsibilities in the areas of human rights, labour, environment and anti-corruption). Please refer to the summary of the policy to assess good governance practices below for further detail.

Adherence to these ESG Criteria will be based on thresholds pre-determined by the Investment Adviser in its sole discretion and will be applied to proprietary data and/or data provided by one or more third party vendor(s). The Investment Adviser will rely on third-party data that it believes to be reliable, but it does not guarantee the accuracy of such third-party data. The Investment Adviser, in its sole discretion, retains the right to disapply data provided by third party vendors where it deems the data to be inaccurate or inappropriate. In some cases, data on specific companies may not be available or may be estimated by the Investment Adviser using internal processes or reasonable estimates. Potential omissions from the ESG Criteria may include but are not limited to newly listed companies to which a third party vendor may not yet have data mapped. In the course of gathering data, vendors may make certain value judgements. The Investment Adviser does not verify those judgements, nor quantify their impact upon its analysis. The Investment Adviser in its sole discretion may periodically update its screening process, amend the type of activities that are excluded for investment or revise the thresholds applicable to any such activities.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Portfolio.

***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

The following indicators are used to measure the attainment of the environmental and/or social characteristics promoted by the Portfolio:

- % of companies in the Portfolio deriving significant revenues from:
  - controversial weapons (including nuclear weapons);
  - extraction and/or production of certain fossil fuels (including thermal coal, oil sands, arctic oil and gas);
  - tobacco;
  - adult entertainment;
  - for-profit prisons;
  - civilian firearms

- % of companies in the Portfolio the Investment Adviser believes to be violating the United Nations Global Compact ten principles.

***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

This question is not applicable as the Portfolio does not commit to making sustainable investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

This question is not applicable as the Portfolio does not commit to making sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

***- How have the indicators for adverse impacts on sustainability factors been taken into account?***

Not applicable.

***- How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Not applicable.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

Yes, this Portfolio considers principal adverse impacts on sustainability factors (PAIs) across the environmental and/or social pillars. PAIs are taken into account qualitatively through the application of the binding ESG Criteria outlined above. On a non-binding and materiality basis, PAIs are also considered through firm-wide and investment team specific engagement. Additional information on which PAIs are taken into account are available on our website and will also be available in the Portfolio's annual report pursuant to SFDR Article 11.

☐ No

## What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investments objectives and risk tolerance.

The Investment Adviser implements the ESG Criteria on a binding basis into its investment process, as described above.

In addition to applying the ESG Criteria as set forth above, the Investment Adviser may integrate ESG factors with traditional fundamental factors as part of its fundamental research process to seek to assess overall business quality and valuation, as well as potential risks. Traditional fundamental factors that the Investment Adviser may consider include, but are not limited to, cash flows, balance sheet leverage, return on invested capital, industry dynamics, earnings quality and profitability. ESG factors that the Investment Adviser may consider include, but are not limited to, carbon intensity and emissions profiles, workplace health and safety, community impact, governance practices and stakeholder relations, employee relations, board structure, transparency and management incentives. The identification of a risk related to an ESG factor will not necessarily exclude a particular security and/or sector that, in the Investment Adviser's view, is otherwise suitable for investment. The relevance of specific traditional fundamental factors and ESG factors to the fundamental investment process varies across asset classes, sectors and strategies. The Investment Adviser may utilise data sources provided by third party vendors and/or engage directly with companies when assessing the above factors. The Investment Adviser employs a dynamic fundamental investment process that considers a wide range of factors, and no one factor or consideration is determinative.

Additionally, this Portfolio leverages the Goldman Sachs Asset Management Global Stewardship Team's engagement initiatives. The Goldman Sachs Asset Management Global Stewardship Team focuses on proactive, outcomes-based engagement, in an attempt to promote best practices. Engagement initiatives are continually reviewed, enhanced and monitored to ensure they incorporate current issues and evolving views about key environmental, social, and governance topics. To guide engagement efforts, the Goldman Sachs Asset Management Global Stewardship Team creates an annual Focus List, which reflects the Goldman Sachs Asset Management Global Stewardship Team's thematic priorities and guides voting and engagement efforts.

## *What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?*

- The Portfolio implements the exclusionary screens as set forth in the ESG Criteria, further described above.

## *What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?*

The ESG Criteria is not designed to reduce investments considered prior to the application of this strategy by a committed minimum amount. The exclusionary screens are intended to ensure that issuers engaged in certain activities are entirely excluded from the Portfolio and is expected to remove between 0-5% of the Reference Portfolio/Benchmark.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

***What is the policy to assess good governance practices of the investee companies?***

The Portfolio leverages Goldman Sachs Asset Management's proprietary approach to identifying and evaluating global norms violators and issuers that may be engaged in poor governance practices, in particular with respect to sound management structures, employee relations, remuneration of staff and tax compliance.

This proprietary approach seeks to identify, review, evaluate and monitor companies that are flagged by external data providers as being in violation of, or otherwise not aligned with, the United Nation Global Compact (UNGC) principles, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights as well as companies that have received high controversy scores (including significant governance controversies, severe labour rights controversies and severe tax compliance controversies). Following review of these external data inputs, companies that the Investment Adviser believes to have an ongoing and serious violation and/or are considered to not be following good governance practices with insufficient remediation will be excluded from the Portfolio. This list of companies will be reviewed on at least a semi-annual basis. The Investment Adviser may not be able to readily sell securities that are intended for exclusion from the Portfolio based on this review (for example, due to liquidity issues or for other reasons outside of the Investment Manager's control), however, will seek to divest as soon as possible in an orderly manner and in the best interests of Shareholders.

## What is the asset allocation planned for this financial product?

**Asset allocation** describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

At least 90% of investments will be aligned to the environmental and/or social characteristics promoted by this Portfolio, as noted above. Up to 10% may be held in cash and cash equivalents and derivatives (including but not limited to index futures).

**How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

This question is not applicable

## To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Portfolio does not currently commit to invest in any “sustainable investments” within the meaning of the EU Taxonomy and therefore its alignment with the Taxonomy is 0%. However, the position will be kept under review as the underlying rules are finalised and the availability of reliable data increases over time.

### Does the financial product invest in fossil gas and/or Nuclear energy related activities that comply with the EU Taxonomy?

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

\* For the purpose of these graphs, ‘sovereign bonds’ consist of all sovereign exposures

### What is the minimum share of investments in transitional and enabling activities?

As the Portfolio does not commit to invest any “sustainable investment” within the meaning of the EU Taxonomy, the minimum share of investments in transitional and enabling activities within the meaning of the EU Taxonomy is therefore also set at 0%.

<sup>1</sup>Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Portfolio promotes environmental and social characteristics but does not commit to making any sustainable investments. As a consequence, the Portfolio does not commit to a minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

**What is the minimum share of socially sustainable investments?**

This question is not applicable as the Portfolio does not commit to make socially sustainable investments.

**What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?**

Investments included under "#2 Other" include cash and cash equivalents for liquidity purposes and derivatives (including but not limited to index futures) for efficient portfolio management. These may be used to achieve the investment objective of the Portfolio but neither promote the environmental or social characteristics of the Portfolio, nor qualify as sustainable investments. The percentage shown is expected to be the maximum which may be held in these instruments but the actual percentage may vary from time to time.

These financial instruments are not subject to any minimum environmental or social safeguards.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

Not applicable

**Where can I find more product specific information online?**

More product-specific information can be found on the website:

### Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

| Does this financial product have a sustainable investment objective?                                                                                                                                                                                                                                                                                                              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

## What environmental and/or social characteristics are promoted by this financial product?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The Investment Adviser implements an approach to Environmental, Social and Governance (ESG) considerations into its fundamental investment process which consists of exclusionary screens as set forth below (the "ESG Criteria").

As part of the ESG investment process, the Investment Adviser will avoid investing in companies that are, in the opinion of the Investment Adviser, directly engaged in, and/or deriving significant revenues from the following activities, which, as at the date of the Prospectus, include but are not limited to:

- controversial weapons (including nuclear weapons);
- extraction and/or production of certain fossil fuels (including thermal coal, oil sands, arctic oil and gas);
- tobacco;
- alcohol;
- adult entertainment;
- for-profit prisons;
- civilian firearms;
- gambling

Information on the criteria applied when assessing the aforementioned revenues may be found at the following [link](#).

The Portfolio will also seek to exclude from its investment universe companies the Investment Adviser believes to be violating the United Nations Global Compact's ten principles (which are widely recognised corporate sustainability principles that meet fundamental responsibilities in the areas of human rights, labour, environment and anti-corruption). Please refer to the summary of the policy to assess good governance practices below for further detail.

Adherence to these ESG Criteria will be based on thresholds pre-determined by the Investment Adviser in its sole discretion and will be applied to proprietary data and/or data provided by one or more third party vendor(s). The Investment Adviser will rely on third-party data that it believes to be reliable, but it does not guarantee the accuracy of such third-party data. The Investment Adviser, in its sole discretion, retains the right to disapply data provided by third party vendors where it deems the data to be inaccurate or inappropriate. In some cases, data on specific companies may not be available or may be estimated by the Investment Adviser using internal processes or reasonable estimates. Potential omissions from the ESG Criteria may include but are not limited to newly listed companies to which a third party vendor may not yet have data mapped. In the course of gathering data, vendors may make certain value judgements. The Investment Adviser does not verify those judgements, nor quantify their impact upon its analysis. The Investment Adviser in its sole discretion may periodically update its screening process, amend the type of activities that are excluded for investment or revise the thresholds applicable to any such activities.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Portfolio.

***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

The following indicators are used to measure the attainment of the environmental and/or social characteristics promoted by the Portfolio:

- % of companies in the Portfolio deriving significant revenues from:
  - controversial weapons (including nuclear weapons);
  - extraction and/or production of certain fossil fuels (including thermal coal, oil sands, arctic oil and gas);
  - tobacco;
  - alcohol;
  - adult entertainment;
  - for-profit prisons;
  - civilian firearms;
  - gambling
  
- % of companies in the Portfolio the Investment Adviser believes to be violating the United Nations Global Compact ten principles.

***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

The consideration of investments made by the Portfolio as sustainable investments is determined by reference to the Investment Advisor's Sustainable Investment Framework, which includes an assessment as to whether the investment contributes to an environmental and/or social objective. Under this framework, an investment is considered to be contributing to an environmental and/or social objective via either a product or operational contribution.

Product contribution considers either i) the proportion of an issuer's revenue dedicated to an environmentally and/or socially sustainable impact category, ii) the alignment of a product to an environmental and/or social Sustainable Development Goal (SDG), iii) best-in-class scoring of an issue(r) as against environmental and/or social opportunities themes defined by an external data provider, or iv) the percentage of taxonomy aligned revenue of the issuer. Due to availability of reliable data, the taxonomy aligned revenue route will only be used as data improves.

Operational contribution takes a thematic approach, looking at the promotion of climate transition (environmental) within the operational framework of the issuer, inclusive growth (social) within the operational framework of the issuer, operational alignment to an environmental or social SDG, or the application of a best-in-class proprietary environmental and social score.

This Portfolio does not target a specific category of sustainable investments but assesses all investments made pursuant to its overall investment strategy using the Sustainable Investment Framework. Hence, the sustainable investments made by this Portfolio may contribute to a variety of environmental and/or social objectives of the sustainable investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

Issuers that are classified as contributing to a sustainable investment are also required to meet the do no significant harm (DNSH) criteria of the Investment Adviser's Sustainable Investment Framework. Any issuers that do not meet the DNSH test will not qualify as a sustainable investment. A proprietary quantitative or qualitative threshold for significant harm has been set for all 14 mandatory indicators relating to investee companies for adverse impacts on sustainability factors ("PAIs") set out in the regulatory technical standards supplementing SFDR.

Additionally, all issuers with a very severe controversy are considered to be causing significant harm and excluded from qualifying as a sustainable investment.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

**- How have the indicators for adverse impacts on sustainability factors been taken into account?**

This Portfolio considers principal adverse impacts on sustainability factors across environmental and social pillars. The PAIs are taken into account through the application of the DNSH principle outlined above for the determination of sustainable investments as well as qualitatively through the Portfolio's investment approach.

In regard to the consideration of the PAIs as part of the DNSH assessment of an issuer, as noted above a proprietary quantitative or qualitative threshold for significant harm has been set for all 14 mandatory PAIs relating to investee companies, and is assessed using information from an external data provider. These thresholds for significant harm have been set on a relative or absolute basis against each PAI depending on the Investment Adviser's assessment of the worst performing investments with respect to those PAIs. Where data is not available for a specific PAI a suitable proxy metric has been identified. If both PAI and proxy PAI data (where relevant) is not available and/or applicable to complete the DNSH assessment on an issuer, such issuer is generally excluded from qualifying as a sustainable investment.

Information on how the product considered principal adverse impacts on sustainability factors will be available in the Portfolio's Annual report.

**- How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

The Portfolio leverages Goldman Sachs Asset Management's proprietary approach to identifying and evaluating companies which, amongst other factors, are not considered to be aligned with global norms as further described below. Following this assessment, any companies which are considered to be in violation of these global norms (including the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights) will be excluded from qualifying as a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

Yes, this Portfolio considers principal adverse impacts on sustainability factors (PAIs) across the environmental and/or social pillars through the DNSH assessment, as outlined above. PAIs are also taken into account qualitatively through the application of the binding ESG Criteria and on a non-binding and materiality basis they are also considered through firm-wide and investment team specific engagement. Additional information on which PAIs are taken into account are available on our website and will also be available in the Portfolio's annual report pursuant to SFDR Article 11.

☐ No

### **What investment strategy does this financial product follow?**

The investment strategy guides investment decisions based on factors such as investments objectives and risk tolerance.

The Investment Adviser implements the ESG Criteria on a binding basis into its investment process, as described above.

Once the Investment Adviser determines that a company meets the Portfolio's ESG Criteria as described above, the Investment Adviser conducts a supplemental analysis of individual companies' corporate governance factors and a range of environmental and social factors that may vary across asset classes, sectors and strategies. This supplemental analysis will be conducted alongside traditional fundamental, bottom-up financial analysis of individual companies, using traditional fundamental metrics. The Investment Adviser may engage in active dialogues with company management teams to further inform investment decision-making and to foster best corporate governance practices using its fundamental and ESG analysis. The Portfolio may invest in a company prior to completion of the supplemental analysis or without engaging with company management. Instances in which the supplemental analysis may not be completed prior to investment include but are not limited to IPOs, in-kind transfers, corporate actions, and/or certain short-term holdings. The Investment Adviser employs a dynamic fundamental investment process that considers a wide range of factors, and no one factor or consideration is determinative. The identification of a risk related to an ESG factor will not necessarily exclude a particular security and/or sector that, in the Investment Adviser's view, is otherwise suitable for investment. The relevance of specific traditional fundamental factors and ESG factors to the fundamental investment process varies across asset classes, sectors and strategies.

Additionally, this Portfolio leverages the Goldman Sachs Asset Management Global Stewardship Team's engagement initiatives. The Goldman Sachs Asset Management Global Stewardship Team focuses on proactive, outcomes-based engagement, in an attempt to promote best practices. Engagement initiatives are continually reviewed, enhanced and monitored to ensure they incorporate current issues and evolving views about key environmental, social, and governance topics. To guide engagement efforts, the Goldman Sachs Asset Management Global Stewardship Team creates an annual Focus List, which reflects the Goldman Sachs Asset Management Global Stewardship Team's thematic priorities and guides voting and engagement efforts.

### ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

- The Portfolio implements the exclusionary screens as set forth in the ESG Criteria, further described above.

### ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The ESG Criteria is not designed to reduce investments considered prior to the application of this strategy by a committed minimum amount. The exclusionary screens are intended to ensure that issuers engaged in certain activities are entirely excluded from the Portfolio and is expected to remove between 5-15% of the Reference Portfolio/Benchmark.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

***What is the policy to assess good governance practices of the investee companies?***

The Portfolio leverages Goldman Sachs Asset Management's proprietary approach to identifying and evaluating global norms violators and issuers that may be engaged in poor governance practices, in particular with respect to sound management structures, employee relations, remuneration of staff and tax compliance.

This proprietary approach seeks to identify, review, evaluate and monitor companies that are flagged by external data providers as being in violation of, or otherwise not aligned with, the United Nation Global Compact (UNGC) principles, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights as well as companies that have received high controversy scores (including significant governance controversies, severe labour rights controversies and severe tax compliance controversies). Following review of these external data inputs, companies that the Investment Adviser believes to have an ongoing and serious violation and/or are considered to not be following good governance practices with insufficient remediation will be excluded from the Portfolio. This list of companies will be reviewed on at least a semi-annual basis. The Investment Adviser may not be able to readily sell securities that are intended for exclusion from the Portfolio based on this review (for example, due to liquidity issues or for other reasons outside of the Investment Manager's control), however, will seek to divest as soon as possible in an orderly manner and in the best interests of Shareholders.

## What is the asset allocation planned for this financial product?

**Asset allocation** describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

At least 90% of investments will be aligned to the environmental and/or social characteristics promoted by this Portfolio, as noted above. Up to 10% may be held in cash and cash equivalents and derivatives (including but not limited to index futures). This Portfolio also commits to holding a minimum of 20% in sustainable investments.

**How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

This question is not applicable

## To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Whilst this Portfolio intends to make sustainable investments, it does not take into account the EU criteria for environmentally sustainable economic activities within the meaning of the EU Taxonomy and therefore its portfolio alignment with such EU Taxonomy is 0%. However, the position will be kept under review as the underlying rules are finalised and the availability of reliable data increases over time.

As noted above, whether investments made by this product are sustainable investments is determined by reference to the Investment Adviser's Sustainable Investment Framework for assessing the contribution of investments to environmental and/or social objectives. This product does not target one specific category of sustainable investments, but instead assesses all investments made pursuant to its overall investment strategy using the framework.

## Does the financial product invest in fossil gas and/or Nuclear energy related activities that comply with the EU Taxonomy<sup>1</sup>?

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

## What is the minimum share of investments in transitional and enabling activities?

Whilst this Portfolio intends to make sustainable investments, it does not take into account the EU criteria for environmentally sustainable economic activities within the meaning of the EU Taxonomy.

<sup>1</sup>Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

Whilst this Sub-Fund intends to make sustainable investments, it does not specifically commit to a minimum proportion of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy. Hence, the minimum commitment is 0%.

**What is the minimum share of socially sustainable investments?**

Whilst this product intends to make sustainable investments, it does not specifically commit to a minimum proportion of socially sustainable investments. Hence, the minimum commitment is 0%.

As noted above, whether investments made by this product are sustainable investments is determined by reference to the Investment Adviser's Sustainable Investment Framework for assessing the contribution of investments to environmental and/or social objectives. This product does not target one specific category of sustainable investments, but instead assesses all investments made pursuant to its overall investment strategy using the framework.

**What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?**

Investments included under “#2 Other” include cash and cash equivalents for liquidity purposes and derivatives (including but not limited to index futures) for efficient portfolio management. These may be used to achieve the investment objective of the Portfolio but neither promote the environmental or social characteristics of the Portfolio, nor qualify as sustainable investments. The percentage shown is expected to be the maximum which may be held in these instruments but the actual percentage may vary from time to time.

These financial instruments are not subject to any minimum environmental or social safeguards.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

Not applicable

**Where can I find more product specific information online?**

### Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

| Does this financial product have a sustainable investment objective?                                                                                                                                                                                                                                                                                                              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

## What environmental and/or social characteristics are promoted by this financial product?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The Investment Adviser implements an approach to Environmental, Social and Governance (ESG) considerations into its fundamental investment process which consists of exclusionary screens as set forth below (the "ESG Criteria").

As part of the ESG investment process, the Investment Adviser will avoid investing in companies that are, in the opinion of the Investment Adviser, directly engaged in, and/or deriving significant revenues from the following activities, which, as at the date of the Prospectus, include but are not limited to:

- controversial weapons (including nuclear weapons);
- extraction and/or production of certain fossil fuels (including thermal coal, oil sands, arctic oil and gas);
- tobacco;
- adult entertainment;
- for-profit prisons;
- civilian firearms

Information on the criteria applied when assessing the aforementioned revenues may be found at the following [link](#).

The Portfolio will also seek to exclude from its investment universe companies the Investment Adviser believes to be violating the United Nations Global Compact's ten principles (which are widely recognised corporate sustainability principles that meet fundamental responsibilities in the areas of human rights, labour, environment and anti-corruption). Please refer to the summary of the policy to assess good governance practices below for further detail.

Adherence to these ESG Criteria will be based on thresholds pre-determined by the Investment Adviser in its sole discretion and will be applied to proprietary data and/or data provided by one or more third party vendor(s). The Investment Adviser will rely on third-party data that it believes to be reliable, but it does not guarantee the accuracy of such third-party data. The Investment Adviser, in its sole discretion, retains the right to disapply data provided by third party vendors where it deems the data to be inaccurate or inappropriate. In some cases, data on specific companies may not be available or may be estimated by the Investment Adviser using internal processes or reasonable estimates. Potential omissions from the ESG Criteria may include but are not limited to newly listed companies to which a third party vendor may not yet have data mapped. In the course of gathering data, vendors may make certain value judgements. The Investment Adviser does not verify those judgements, nor quantify their impact upon its analysis. The Investment Adviser in its sole discretion may periodically update its screening process, amend the type of activities that are excluded for investment or revise the thresholds applicable to any such activities.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Portfolio.

***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

The following indicators are used to measure the attainment of the environmental and/or social characteristics promoted by the Portfolio:

- % of companies in the Portfolio deriving significant revenues from:
  - controversial weapons (including nuclear weapons);
  - extraction and/or production of certain fossil fuels (including thermal coal, oil sands, arctic oil and gas);
  - tobacco;
  - adult entertainment;
  - for-profit prisons;
  - civilian firearms
  
- % of companies in the Portfolio the Investment Adviser believes to be violating the United Nations Global Compact ten principles.

***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

The consideration of investments made by the Portfolio as sustainable investments is determined by reference to the Investment Adviser's Sustainable Investment Framework, which includes an assessment as to whether the investment contributes to an environmental and/or social objective. Under this framework, an investment is considered to be contributing to an environmental and/or social objective via either a product or operational contribution.

Product contribution considers either i) the proportion of an issuer's revenue dedicated to an environmentally and/or socially sustainable impact category, ii) the alignment of a product to an environmental and/or social Sustainable Development Goal (SDG), iii) best-in-class scoring of an issue(r) as against environmental and/or social opportunities themes defined by an external data provider, or iv) the percentage of taxonomy aligned revenue of the issuer. Due to availability of reliable data, the taxonomy aligned revenue route will only be used as data improves.

Operational contribution takes a thematic approach, looking at the promotion of climate transition (environmental) within the operational framework of the issuer, inclusive growth (social) within the operational framework of the issuer, operational alignment to an environmental or social SDG, or the application of a best-in-class proprietary environmental and social score.

This Portfolio does not target a specific category of sustainable investments but assesses all investments made pursuant to its overall investment strategy using the Sustainable Investment Framework. Hence, the sustainable investments made by this Portfolio may contribute to a variety of environmental and/or social objectives of the sustainable investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

Issuers that are classified as contributing to a sustainable investment are also required to meet the do no significant harm (DNSH) criteria of the Investment Adviser's Sustainable Investment Framework. Any issuers that do not meet the DNSH test will not qualify as a sustainable investment. A proprietary quantitative or qualitative threshold for significant harm has been set for all 14 mandatory indicators relating to investee companies for adverse impacts on sustainability factors ("PAIs") set out in the regulatory technical standards supplementing SFDR.

Additionally, all issuers with a very severe controversy are considered to be causing significant harm and excluded from qualifying as a sustainable investment.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

**- How have the indicators for adverse impacts on sustainability factors been taken into account?**

This Portfolio considers principal adverse impacts on sustainability factors across environmental and social pillars. The PAIs are taken into account through the application of the DNSH principle outlined above for the determination of sustainable investments as well as qualitatively through the Portfolio's investment approach.

In regard to the consideration of the PAIs as part of the DNSH assessment of an issuer, as noted above a proprietary quantitative or qualitative threshold for significant harm has been set for all 14 mandatory PAIs relating to investee companies, and is assessed using information from an external data provider. These thresholds for significant harm have been set on a relative or absolute basis against each PAI depending on the Investment Adviser's assessment of the worst performing investments with respect to those PAIs. Where data is not available for a specific PAI a suitable proxy metric has been identified. If both PAI and proxy PAI data (where relevant) is not available and/or applicable to complete the DNSH assessment on an issuer, such issuer is generally excluded from qualifying as a sustainable investment.

Information on how the product considered principal adverse impacts on sustainability factors will be available in the Portfolio's Annual report.

**- How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

The Portfolio leverages Goldman Sachs Asset Management's proprietary approach to identifying and evaluating companies which, amongst other factors, are not considered to be aligned with global norms as further described below. Following this assessment, any companies which are considered to be in violation of these global norms (including the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights) will be excluded from qualifying as a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

Yes, this Portfolio considers principal adverse impacts on sustainability factors (PAIs) across the environmental and/or social pillars through the DNSH assessment, as outlined above. PAIs are also taken into account qualitatively through the application of the binding ESG Criteria and on a non-binding and materiality basis they are also considered through firm-wide and investment team specific engagement. Additional information on which PAIs are taken into account are available on our website and will also be available in the Portfolio's annual report pursuant to SFDR Article 11.

☐ No

## What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investments objectives and risk tolerance.

The Investment Adviser implements the ESG Criteria on a binding basis into its investment process, as described above.

In addition to applying the ESG Criteria as set forth above, the Investment Adviser may integrate ESG factors with traditional fundamental factors as part of its fundamental research process to seek to assess overall business quality and valuation, as well as potential risks. Traditional fundamental factors that the Investment Adviser may consider include, but are not limited to, cash flows, balance sheet leverage, return on invested capital, industry dynamics, earnings quality and profitability. ESG factors that the Investment Adviser may consider include, but are not limited to, carbon intensity and emissions profiles, workplace health and safety, community impact, governance practices and stakeholder relations, employee relations, board structure, transparency and management incentives. The identification of a risk related to an ESG factor will not necessarily exclude a particular security and/or sector that, in the Investment Adviser's view, is otherwise suitable for investment. The relevance of specific traditional fundamental factors and ESG factors to the fundamental investment process varies across asset classes, sectors and strategies. The Investment Adviser may utilise data sources provided by third party vendors and/or engage directly with companies when assessing the above factors. The Investment Adviser employs a dynamic fundamental investment process that considers a wide range of factors, and no one factor or consideration is determinative.

Additionally, this Portfolio leverages the Goldman Sachs Asset Management Global Stewardship Team's engagement initiatives. The Goldman Sachs Asset Management Global Stewardship Team focuses on proactive, outcomes-based engagement, in an attempt to promote best practices. Engagement initiatives are continually reviewed, enhanced and monitored to ensure they incorporate current issues and evolving views about key environmental, social, and governance topics. To guide engagement efforts, the Goldman Sachs Asset Management Global Stewardship Team creates an annual Focus List, which reflects the Goldman Sachs Asset Management Global Stewardship Team's thematic priorities and guides voting and engagement efforts.

## *What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?*

- The Portfolio implements the exclusionary screens as set forth in the ESG Criteria, further described above.

## *What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?*

The ESG Criteria is not designed to reduce investments considered prior to the application of this strategy by a committed minimum amount. The exclusionary screens are intended to ensure that issuers engaged in certain activities are entirely excluded from the Portfolio and is expected to remove between 0-5% of the Reference Portfolio/Benchmark.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

***What is the policy to assess good governance practices of the investee companies?***

The Portfolio leverages Goldman Sachs Asset Management's proprietary approach to identifying and evaluating global norms violators and issuers that may be engaged in poor governance practices, in particular with respect to sound management structures, employee relations, remuneration of staff and tax compliance.

This proprietary approach seeks to identify, review, evaluate and monitor companies that are flagged by external data providers as being in violation of, or otherwise not aligned with, the United Nation Global Compact (UNGC) principles, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights as well as companies that have received high controversy scores (including significant governance controversies, severe labour rights controversies and severe tax compliance controversies). Following review of these external data inputs, companies that the Investment Adviser believes to have an ongoing and serious violation and/or are considered to not be following good governance practices with insufficient remediation will be excluded from the Portfolio. This list of companies will be reviewed on at least a semi-annual basis. The Investment Adviser may not be able to readily sell securities that are intended for exclusion from the Portfolio based on this review (for example, due to liquidity issues or for other reasons outside of the Investment Manager's control), however, will seek to divest as soon as possible in an orderly manner and in the best interests of Shareholders.

## What is the asset allocation planned for this financial product?

**Asset allocation** describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

At least 90% of investments will be aligned to the environmental and/or social characteristics promoted by this Portfolio, as noted above. Up to 10% may be held in cash and cash equivalents and derivatives (including but not limited to index futures). This Portfolio also commits to holding a minimum of 10% in sustainable investments.

**How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

This question is not applicable

## To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Whilst this Portfolio intends to make sustainable investments, it does not take into account the EU criteria for environmentally sustainable economic activities within the meaning of the EU Taxonomy and therefore its portfolio alignment with such EU Taxonomy is 0%. However, the position will be kept under review as the underlying rules are finalised and the availability of reliable data increases over time.

As noted above, whether investments made by this product are sustainable investments is determined by reference to the Investment Adviser's Sustainable Investment Framework for assessing the contribution of investments to environmental and/or social objectives. This product does not target one specific category of sustainable investments, but instead assesses all investments made pursuant to its overall investment strategy using the framework.

### Does the financial product invest in fossil gas and/or Nuclear energy related activities that comply with the EU Taxonomy<sup>1</sup>?

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

### What is the minimum share of investments in transitional and enabling activities?

Whilst this Portfolio intends to make sustainable investments, it does not take into account the EU criteria for environmentally sustainable economic activities within the meaning of the EU Taxonomy.

<sup>1</sup>Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

Whilst this Sub-Fund intends to make sustainable investments, it does not specifically commit to a minimum proportion of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy. Hence, the minimum commitment is 0%.

**What is the minimum share of socially sustainable investments?**

Whilst this product intends to make sustainable investments, it does not specifically commit to a minimum proportion of socially sustainable investments. Hence, the minimum commitment is 0%.

As noted above, whether investments made by this product are sustainable investments is determined by reference to the Investment Adviser's Sustainable Investment Framework for assessing the contribution of investments to environmental and/or social objectives. This product does not target one specific category of sustainable investments, but instead assesses all investments made pursuant to its overall investment strategy using the framework.

**What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?**

Investments included under "#2 Other" include cash and cash equivalents for liquidity purposes and derivatives (including but not limited to index futures) for efficient portfolio management. These may be used to achieve the investment objective of the Portfolio but neither promote the environmental or social characteristics of the Portfolio, nor qualify as sustainable investments. The percentage shown is expected to be the maximum which may be held in these instruments but the actual percentage may vary from time to time.

These financial instruments are not subject to any minimum environmental or social safeguards.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

Not applicable

**Where can I find more product specific information online?**

### Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

| Does this financial product have a sustainable investment objective?                                                                                                                                                                                                                                                                                                                                                           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

## What environmental and/or social characteristics are promoted by this financial product?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The Investment Adviser implements an approach to Environmental, Social and Governance (ESG) considerations into its fundamental investment process which consists of exclusionary screens as set forth below (the "ESG Criteria").

As part of the ESG investment process, the Investment Adviser will avoid investing in companies that are, in the opinion of the Investment Adviser, directly engaged in, and/or deriving significant revenues from the following activities, which, as at the date of the Prospectus, include but are not limited to:

- controversial weapons (including nuclear weapons);
- extraction and/or production of certain fossil fuels (including thermal coal, oil sands, arctic oil and gas);
- tobacco;
- adult entertainment;
- for-profit prisons;
- civilian firearms

Information on the criteria applied when assessing the aforementioned revenues may be found at the following [link](#).

The Portfolio will also seek to exclude from its investment universe companies the Investment Adviser believes to be violating the United Nations Global Compact's ten principles (which are widely recognised corporate sustainability principles that meet fundamental responsibilities in the areas of human rights, labour, environment and anti-corruption). Please refer to the summary of the policy to assess good governance practices below for further detail.

Adherence to these ESG Criteria will be based on thresholds pre-determined by the Investment Adviser in its sole discretion and will be applied to proprietary data and/or data provided by one or more third party vendor(s). The Investment Adviser will rely on third-party data that it believes to be reliable, but it does not guarantee the accuracy of such third-party data. The Investment Adviser, in its sole discretion, retains the right to disapply data provided by third party vendors where it deems the data to be inaccurate or inappropriate. In some cases, data on specific companies may not be available or may be estimated by the Investment Adviser using internal processes or reasonable estimates. Potential omissions from the ESG Criteria may include but are not limited to newly listed companies to which a third party vendor may not yet have data mapped. In the course of gathering data, vendors may make certain value judgements. The Investment Adviser does not verify those judgements, nor quantify their impact upon its analysis. The Investment Adviser in its sole discretion may periodically update its screening process, amend the type of activities that are excluded for investment or revise the thresholds applicable to any such activities.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Portfolio.

***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

The following indicators are used to measure the attainment of the environmental and/or social characteristics promoted by the Portfolio:

- % of companies in the Portfolio deriving significant revenues from:
  - controversial weapons (including nuclear weapons);
  - extraction and/or production of certain fossil fuels (including thermal coal, oil sands, arctic oil and gas);
  - tobacco;
  - adult entertainment;
  - for-profit prisons;
  - civilian firearms

- % of companies in the Portfolio the Investment Adviser believes to be violating the United Nations Global Compact ten principles.

***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

This question is not applicable as the Portfolio does not commit to making sustainable investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

This question is not applicable as the Portfolio does not commit to making sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

***- How have the indicators for adverse impacts on sustainability factors been taken into account?***

Not applicable.

***- How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Not applicable.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

Yes, this Portfolio considers principal adverse impacts on sustainability factors (PAIs) across the environmental and/or social pillars. PAIs are taken into account qualitatively through the application of the binding ESG Criteria outlined above. On a non-binding and materiality basis, PAIs are also considered through firm-wide and investment team specific engagement. Additional information on which PAIs are taken into account are available on our website and will also be available in the Portfolio's annual report pursuant to SFDR Article 11.

☐ No

### **What investment strategy does this financial product follow?**

The investment strategy guides investment decisions based on factors such as investments objectives and risk tolerance.

The Investment Adviser implements the ESG Criteria on a binding basis into its investment process, as described above.

In addition to applying the ESG Criteria as set forth above, the Investment Adviser may integrate ESG factors with traditional fundamental factors as part of its fundamental research process to seek to assess overall business quality and valuation, as well as potential risks. Traditional fundamental factors that the Investment Adviser may consider include, but are not limited to, cash flows, balance sheet leverage, return on invested capital, industry dynamics, earnings quality and profitability. ESG factors that the Investment Adviser may consider include, but are not limited to, carbon intensity and emissions profiles, workplace health and safety, community impact, governance practices and stakeholder relations, employee relations, board structure, transparency and management incentives. The identification of a risk related to an ESG factor will not necessarily exclude a particular security and/or sector that, in the Investment Adviser's view, is otherwise suitable for investment. The relevance of specific traditional fundamental factors and ESG factors to the fundamental investment process varies across asset classes, sectors and strategies. The Investment Adviser may utilise data sources provided by third party vendors and/or engage directly with companies when assessing the above factors. The Investment Adviser employs a dynamic fundamental investment process that considers a wide range of factors, and no one factor or consideration is determinative.

Additionally, this Portfolio leverages the Goldman Sachs Asset Management Global Stewardship Team's engagement initiatives. The Goldman Sachs Asset Management Global Stewardship Team focuses on proactive, outcomes-based engagement, in an attempt to promote best practices. Engagement initiatives are continually reviewed, enhanced and monitored to ensure they incorporate current issues and evolving views about key environmental, social, and governance topics. To guide engagement efforts, the Goldman Sachs Asset Management Global Stewardship Team creates an annual Focus List, which reflects the Goldman Sachs Asset Management Global Stewardship Team's thematic priorities and guides voting and engagement efforts.

### ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

- The Portfolio implements the exclusionary screens as set forth in the ESG Criteria, further described above.

### ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The ESG Criteria is not designed to reduce investments considered prior to the application of this strategy by a committed minimum amount. The exclusionary screens are intended to ensure that issuers engaged in certain activities are entirely excluded from the Portfolio and is expected to remove between 0-5% of the Reference Portfolio/Benchmark.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

***What is the policy to assess good governance practices of the investee companies?***

The Portfolio leverages Goldman Sachs Asset Management's proprietary approach to identifying and evaluating global norms violators and issuers that may be engaged in poor governance practices, in particular with respect to sound management structures, employee relations, remuneration of staff and tax compliance.

This proprietary approach seeks to identify, review, evaluate and monitor companies that are flagged by external data providers as being in violation of, or otherwise not aligned with, the United Nation Global Compact (UNGC) principles, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights as well as companies that have received high controversy scores (including significant governance controversies, severe labour rights controversies and severe tax compliance controversies). Following review of these external data inputs, companies that the Investment Adviser believes to have an ongoing and serious violation and/or are considered to not be following good governance practices with insufficient remediation will be excluded from the Portfolio. This list of companies will be reviewed on at least a semi-annual basis. The Investment Adviser may not be able to readily sell securities that are intended for exclusion from the Portfolio based on this review (for example, due to liquidity issues or for other reasons outside of the Investment Manager's control), however, will seek to divest as soon as possible in an orderly manner and in the best interests of Shareholders.

## What is the asset allocation planned for this financial product?

**Asset allocation** describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

At least 90% of investments will be aligned to the environmental and/or social characteristics promoted by this Portfolio, as noted above. Up to 10% may be held in cash and cash equivalents and derivatives (including but not limited to index futures).

**How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

This question is not applicable

## To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Portfolio does not currently commit to invest in any “sustainable investments” within the meaning of the EU Taxonomy and therefore its alignment with the Taxonomy is 0%. However, the position will be kept under review as the underlying rules are finalised and the availability of reliable data increases over time.

## Does the financial product invest in fossil gas and/or Nuclear energy related activities that comply with the EU Taxonomy?

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

\* For the purpose of these graphs, ‘sovereign bonds’ consist of all sovereign exposures

## What is the minimum share of investments in transitional and enabling activities?

As the Portfolio does not commit to invest any “sustainable investment” within the meaning of the EU Taxonomy, the minimum share of investments in transitional and enabling activities within the meaning of the EU Taxonomy is therefore also set at 0%.

<sup>1</sup>Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Portfolio promotes environmental and social characteristics but does not commit to making any sustainable investments. As a consequence, the Portfolio does not commit to a minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

**What is the minimum share of socially sustainable investments?**

This question is not applicable as the Portfolio does not commit to make socially sustainable investments.

**What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?**

Investments included under “#2 Other” include cash and cash equivalents for liquidity purposes and derivatives (including but not limited to index futures) for efficient portfolio management. These may be used to achieve the investment objective of the Portfolio but neither promote the environmental or social characteristics of the Portfolio, nor qualify as sustainable investments. The percentage shown is expected to be the maximum which may be held in these instruments but the actual percentage may vary from time to time.

These financial instruments are not subject to any minimum environmental or social safeguards.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

Not applicable

**Where can I find more product specific information online?**

More product-specific information can be found on the website:

### Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

| Does this financial product have a sustainable investment objective?                                                                                                                                                                                                                                                                                                              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

## What environmental and/or social characteristics are promoted by this financial product?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The Investment Adviser implements an approach to Environmental, Social and Governance (ESG) considerations into its fundamental investment process which consists of exclusionary screens as set forth below (the "ESG Criteria").

As part of the ESG investment process, the Investment Adviser will avoid investing in companies that are, in the opinion of the Investment Adviser, directly engaged in, and/or deriving significant revenues from the following activities, which, as at the date of the Prospectus, include but are not limited to:

- controversial weapons (including nuclear weapons);
- extraction and/or production of certain fossil fuels (including thermal coal, oil sands, arctic oil and gas);
- tobacco;
- adult entertainment;
- for-profit prisons;
- civilian firearms

Information on the criteria applied when assessing the aforementioned revenues may be found at the following [link](#).

The Portfolio will also seek to exclude from its investment universe companies the Investment Adviser believes to be violating the United Nations Global Compact's ten principles (which are widely recognised corporate sustainability principles that meet fundamental responsibilities in the areas of human rights, labour, environment and anti-corruption). Please refer to the summary of the policy to assess good governance practices below for further detail.

Adherence to these ESG Criteria will be based on thresholds pre-determined by the Investment Adviser in its sole discretion and will be applied to proprietary data and/or data provided by one or more third party vendor(s). The Investment Adviser will rely on third-party data that it believes to be reliable, but it does not guarantee the accuracy of such third-party data. The Investment Adviser, in its sole discretion, retains the right to disapply data provided by third party vendors where it deems the data to be inaccurate or inappropriate. In some cases, data on specific companies may not be available or may be estimated by the Investment Adviser using internal processes or reasonable estimates. Potential omissions from the ESG Criteria may include but are not limited to newly listed companies to which a third party vendor may not yet have data mapped. In the course of gathering data, vendors may make certain value judgements. The Investment Adviser does not verify those judgements, nor quantify their impact upon its analysis. The Investment Adviser in its sole discretion may periodically update its screening process, amend the type of activities that are excluded for investment or revise the thresholds applicable to any such activities.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Portfolio.

***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

The following indicators are used to measure the attainment of the environmental and/or social characteristics promoted by the Portfolio:

- % of companies in the Portfolio deriving significant revenues from:
  - controversial weapons (including nuclear weapons);
  - extraction and/or production of certain fossil fuels (including thermal coal, oil sands, arctic oil and gas);
  - tobacco;
  - adult entertainment;
  - for-profit prisons;
  - civilian firearms
  
- % of companies in the Portfolio the Investment Adviser believes to be violating the United Nations Global Compact ten principles.

***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

The consideration of investments made by the Portfolio as sustainable investments is determined by reference to the Investment Adviser's Sustainable Investment Framework, which includes an assessment as to whether the investment contributes to an environmental and/or social objective. Under this framework, an investment is considered to be contributing to an environmental and/or social objective via either a product or operational contribution.

Product contribution considers either i) the proportion of an issuer's revenue dedicated to an environmentally and/or socially sustainable impact category, ii) the alignment of a product to an environmental and/or social Sustainable Development Goal (SDG), iii) best-in-class scoring of an issue(r) as against environmental and/or social opportunities themes defined by an external data provider, or iv) the percentage of taxonomy aligned revenue of the issuer. Due to availability of reliable data, the taxonomy aligned revenue route will only be used as data improves.

Operational contribution takes a thematic approach, looking at the promotion of climate transition (environmental) within the operational framework of the issuer, inclusive growth (social) within the operational framework of the issuer, operational alignment to an environmental or social SDG, or the application of a best-in-class proprietary environmental and social score.

This Portfolio does not target a specific category of sustainable investments but assesses all investments made pursuant to its overall investment strategy using the Sustainable Investment Framework. Hence, the sustainable investments made by this Portfolio may contribute to a variety of environmental and/or social objectives of the sustainable investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

Issuers that are classified as contributing to a sustainable investment are also required to meet the do no significant harm (DNSH) criteria of the Investment Adviser's Sustainable Investment Framework. Any issuers that do not meet the DNSH test will not qualify as a sustainable investment. A proprietary quantitative or qualitative threshold for significant harm has been set for all 14 mandatory indicators relating to investee companies for adverse impacts on sustainability factors ("PAIs") set out in the regulatory technical standards supplementing SFDR.

Additionally, all issuers with a very severe controversy are considered to be causing significant harm and excluded from qualifying as a sustainable investment.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

**- How have the indicators for adverse impacts on sustainability factors been taken into account?**

This Portfolio considers principal adverse impacts on sustainability factors across environmental and social pillars. The PAIs are taken into account through the application of the DNSH principle outlined above for the determination of sustainable investments as well as qualitatively through the Portfolio's investment approach.

In regard to the consideration of the PAIs as part of the DNSH assessment of an issuer, as noted above a proprietary quantitative or qualitative threshold for significant harm has been set for all 14 mandatory PAIs relating to investee companies, and is assessed using information from an external data provider. These thresholds for significant harm have been set on a relative or absolute basis against each PAI depending on the Investment Adviser's assessment of the worst performing investments with respect to those PAIs. Where data is not available for a specific PAI a suitable proxy metric has been identified. If both PAI and proxy PAI data (where relevant) is not available and/or applicable to complete the DNSH assessment on an issuer, such issuer is generally excluded from qualifying as a sustainable investment.

Information on how the product considered principal adverse impacts on sustainability factors will be available in the Portfolio's Annual report.

**- How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

The Portfolio leverages Goldman Sachs Asset Management's proprietary approach to identifying and evaluating companies which, amongst other factors, are not considered to be aligned with global norms as further described below. Following this assessment, any companies which are considered to be in violation of these global norms (including the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights) will be excluded from qualifying as a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

Yes, this Portfolio considers principal adverse impacts on sustainability factors (PAIs) across the environmental and/or social pillars through the DNSH assessment, as outlined above. PAIs are also taken into account qualitatively through the application of the binding ESG Criteria and on a non-binding and materiality basis they are also considered through firm-wide and investment team specific engagement. Additional information on which PAIs are taken into account are available on our website and will also be available in the Portfolio's annual report pursuant to SFDR Article 11.

☐ No

### **What investment strategy does this financial product follow?**

The investment strategy guides investment decisions based on factors such as investments objectives and risk tolerance.

The Investment Adviser implements the ESG Criteria on a binding basis into its investment process, as described above.

In addition to applying the ESG Criteria as set forth above, the Investment Adviser may integrate ESG factors with traditional fundamental factors as part of its fundamental research process to seek to assess overall business quality and valuation, as well as potential risks. Traditional fundamental factors that the Investment Adviser may consider include, but are not limited to, cash flows, balance sheet leverage, return on invested capital, industry dynamics, earnings quality and profitability. ESG factors that the Investment Adviser may consider include, but are not limited to, carbon intensity and emissions profiles, workplace health and safety, community impact, governance practices and stakeholder relations, employee relations, board structure, transparency and management incentives. The identification of a risk related to an ESG factor will not necessarily exclude a particular security and/or sector that, in the Investment Adviser's view, is otherwise suitable for investment. The relevance of specific traditional fundamental factors and ESG factors to the fundamental investment process varies across asset classes, sectors and strategies. The Investment Adviser may utilise data sources provided by third party vendors and/or engage directly with companies when assessing the above factors. The Investment Adviser employs a dynamic fundamental investment process that considers a wide range of factors, and no one factor or consideration is determinative.

Additionally, this Portfolio leverages the Goldman Sachs Asset Management Global Stewardship Team's engagement initiatives. The Goldman Sachs Asset Management Global Stewardship Team focuses on proactive, outcomes-based engagement, in an attempt to promote best practices. Engagement initiatives are continually reviewed, enhanced and monitored to ensure they incorporate current issues and evolving views about key environmental, social, and governance topics. To guide engagement efforts, the Goldman Sachs Asset Management Global Stewardship Team creates an annual Focus List, which reflects the Goldman Sachs Asset Management Global Stewardship Team's thematic priorities and guides voting and engagement efforts.

### ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

- The Portfolio implements the exclusionary screens as set forth in the ESG Criteria, further described above.

### ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The ESG Criteria is not designed to reduce investments considered prior to the application of this strategy by a committed minimum amount. The exclusionary screens are intended to ensure that issuers engaged in certain activities are entirely excluded from the Portfolio and is expected to remove between 0-5% of the Reference Portfolio/Benchmark.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

***What is the policy to assess good governance practices of the investee companies?***

The Portfolio leverages Goldman Sachs Asset Management’s proprietary approach to identifying and evaluating global norms violators and issuers that may be engaged in poor governance practices, in particular with respect to sound management structures, employee relations, remuneration of staff and tax compliance.

This proprietary approach seeks to identify, review, evaluate and monitor companies that are flagged by external data providers as being in violation of, or otherwise not aligned with, the United Nation Global Compact (UNGC) principles, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights as well as companies that have received high controversy scores (including significant governance controversies, severe labour rights controversies and severe tax compliance controversies). Following review of these external data inputs, companies that the Investment Adviser believes to have an ongoing and serious violation and/or are considered to not be following good governance practices with insufficient remediation will be excluded from the Portfolio. This list of companies will be reviewed on at least a semi-annual basis. The Investment Adviser may not be able to readily sell securities that are intended for exclusion from the Portfolio based on this review (for example, due to liquidity issues or for other reasons outside of the Investment Manager’s control), however, will seek to divest as soon as possible in an orderly manner and in the best interests of Shareholders.

## What is the asset allocation planned for this financial product?

**Asset allocation** describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

At least 90% of investments will be aligned to the environmental and/or social characteristics promoted by this Portfolio, as noted above. Up to 10% may be held in cash and cash equivalents and derivatives (including but not limited to index futures). This Portfolio also commits to holding a minimum of 10% in sustainable investments.

**How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

This question is not applicable

## To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Whilst this Portfolio intends to make sustainable investments, it does not take into account the EU criteria for environmentally sustainable economic activities within the meaning of the EU Taxonomy and therefore its portfolio alignment with such EU Taxonomy is 0%. However, the position will be kept under review as the underlying rules are finalised and the availability of reliable data increases over time.

As noted above, whether investments made by this product are sustainable investments is determined by reference to the Investment Adviser's Sustainable Investment Framework for assessing the contribution of investments to environmental and/or social objectives. This product does not target one specific category of sustainable investments, but instead assesses all investments made pursuant to its overall investment strategy using the framework.

## Does the financial product invest in fossil gas and/or Nuclear energy related activities that comply with the EU Taxonomy<sup>1</sup>?

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

## What is the minimum share of investments in transitional and enabling activities?

Whilst this Portfolio intends to make sustainable investments, it does not take into account the EU criteria for environmentally sustainable economic activities within the meaning of the EU Taxonomy.

<sup>1</sup>Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

Whilst this Sub-Fund intends to make sustainable investments, it does not specifically commit to a minimum proportion of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy. Hence, the minimum commitment is 0%.

**What is the minimum share of socially sustainable investments?**

Whilst this product intends to make sustainable investments, it does not specifically commit to a minimum proportion of socially sustainable investments. Hence, the minimum commitment is 0%.

As noted above, whether investments made by this product are sustainable investments is determined by reference to the Investment Adviser's Sustainable Investment Framework for assessing the contribution of investments to environmental and/or social objectives. This product does not target one specific category of sustainable investments, but instead assesses all investments made pursuant to its overall investment strategy using the framework.

**What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?**

Investments included under “#2 Other” include cash and cash equivalents for liquidity purposes and derivatives (including but not limited to index futures) for efficient portfolio management. These may be used to achieve the investment objective of the Portfolio but neither promote the environmental or social characteristics of the Portfolio, nor qualify as sustainable investments. The percentage shown is expected to be the maximum which may be held in these instruments but the actual percentage may vary from time to time.

These financial instruments are not subject to any minimum environmental or social safeguards.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

Not applicable

**Where can I find more product specific information online?**

## Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name:  
Goldman Sachs India Equity Portfolio

Legal entity identifier:  
5493008F1XGBJITK4N13

### Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

| Does this financial product have a sustainable investment objective?                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

## What environmental and/or social characteristics are promoted by this financial product?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The Investment Adviser implements an approach to Environmental, Social and Governance (ESG) considerations into its fundamental investment process which consists of exclusionary screens as set forth below (the "ESG Criteria").

As part of the ESG investment process, the Investment Adviser will avoid investing in companies that are, in the opinion of the Investment Adviser, directly engaged in, and/or deriving significant revenues from the following activities, which, as at the date of the Prospectus, include but are not limited to:

- controversial weapons (including nuclear weapons);
- extraction and/or production of certain fossil fuels (including thermal coal, oil sands, arctic oil and gas);
- tobacco;
- adult entertainment;
- for-profit prisons;
- civilian firearms

Information on the criteria applied when assessing the aforementioned revenues may be found at the following [link](#).

The Portfolio will also seek to exclude from its investment universe companies the Investment Adviser believes to be violating the United Nations Global Compact's ten principles (which are widely recognised corporate sustainability principles that meet fundamental responsibilities in the areas of human rights, labour, environment and anti-corruption). Please refer to the summary of the policy to assess good governance practices below for further detail.

Adherence to these ESG Criteria will be based on thresholds pre-determined by the Investment Adviser in its sole discretion and will be applied to proprietary data and/or data provided by one or more third party vendor(s). The Investment Adviser will rely on third-party data that it believes to be reliable, but it does not guarantee the accuracy of such third-party data. The Investment Adviser, in its sole discretion, retains the right to disapply data provided by third party vendors where it deems the data to be inaccurate or inappropriate. In some cases, data on specific companies may not be available or may be estimated by the Investment Adviser using internal processes or reasonable estimates. Potential omissions from the ESG Criteria may include but are not limited to newly listed companies to which a third party vendor may not yet have data mapped. In the course of gathering data, vendors may make certain value judgements. The Investment Adviser does not verify those judgements, nor quantify their impact upon its analysis. The Investment Adviser in its sole discretion may periodically update its screening process, amend the type of activities that are excluded for investment or revise the thresholds applicable to any such activities.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Portfolio.

***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

The following indicators are used to measure the attainment of the environmental and/or social characteristics promoted by the Portfolio:

- % of companies in the Portfolio deriving significant revenues from:
  - controversial weapons (including nuclear weapons);
  - extraction and/or production of certain fossil fuels (including thermal coal, oil sands, arctic oil and gas);
  - tobacco;
  - adult entertainment;
  - for-profit prisons;
  - civilian firearms
  
- % of companies in the Portfolio the Investment Adviser believes to be violating the United Nations Global Compact ten principles.

***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

The consideration of investments made by the Portfolio as sustainable investments is determined by reference to the Investment Adviser's Sustainable Investment Framework, which includes an assessment as to whether the investment contributes to an environmental and/or social objective. Under this framework, an investment is considered to be contributing to an environmental and/or social objective via either a product or operational contribution.

Product contribution considers either i) the proportion of an issuer's revenue dedicated to an environmentally and/or socially sustainable impact category, ii) the alignment of a product to an environmental and/or social Sustainable Development Goal (SDG), iii) best-in-class scoring of an issue(r) as against environmental and/or social opportunities themes defined by an external data provider, or iv) the percentage of taxonomy aligned revenue of the issuer. Due to availability of reliable data, the taxonomy aligned revenue route will only be used as data improves.

Operational contribution takes a thematic approach, looking at the promotion of climate transition (environmental) within the operational framework of the issuer, inclusive growth (social) within the operational framework of the issuer, operational alignment to an environmental or social SDG, or the application of a best-in-class proprietary environmental and social score.

This Portfolio does not target a specific category of sustainable investments but assesses all investments made pursuant to its overall investment strategy using the Sustainable Investment Framework. Hence, the sustainable investments made by this Portfolio may contribute to a variety of environmental and/or social objectives of the sustainable investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

Issuers that are classified as contributing to a sustainable investment are also required to meet the do no significant harm (DNSH) criteria of the Investment Adviser's Sustainable Investment Framework. Any issuers that do not meet the DNSH test will not qualify as a sustainable investment. A proprietary quantitative or qualitative threshold for significant harm has been set for all 14 mandatory indicators relating to investee companies for adverse impacts on sustainability factors ("PAIs") set out in the regulatory technical standards supplementing SFDR.

Additionally, all issuers with a very severe controversy are considered to be causing significant harm and excluded from qualifying as a sustainable investment.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

**- How have the indicators for adverse impacts on sustainability factors been taken into account?**

This Portfolio considers principal adverse impacts on sustainability factors across environmental and social pillars. The PAIs are taken into account through the application of the DNSH principle outlined above for the determination of sustainable investments as well as qualitatively through the Portfolio's investment approach.

In regard to the consideration of the PAIs as part of the DNSH assessment of an issuer, as noted above a proprietary quantitative or qualitative threshold for significant harm has been set for all 14 mandatory PAIs relating to investee companies, and is assessed using information from an external data provider. These thresholds for significant harm have been set on a relative or absolute basis against each PAI depending on the Investment Adviser's assessment of the worst performing investments with respect to those PAIs. Where data is not available for a specific PAI a suitable proxy metric has been identified. If both PAI and proxy PAI data (where relevant) is not available and/or applicable to complete the DNSH assessment on an issuer, such issuer is generally excluded from qualifying as a sustainable investment.

Information on how the product considered principal adverse impacts on sustainability factors will be available in the Portfolio's Annual report.

**- How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

The Portfolio leverages Goldman Sachs Asset Management's proprietary approach to identifying and evaluating companies which, amongst other factors, are not considered to be aligned with global norms as further described below. Following this assessment, any companies which are considered to be in violation of these global norms (including the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights) will be excluded from qualifying as a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

Yes, this Portfolio considers principal adverse impacts on sustainability factors (PAIs) across the environmental and/or social pillars through the DNSH assessment, as outlined above. PAIs are also taken into account qualitatively through the application of the binding ESG Criteria and on a non-binding and materiality basis they are also considered through firm-wide and investment team specific engagement. Additional information on which PAIs are taken into account are available on our website and will also be available in the Portfolio's annual report pursuant to SFDR Article 11.

☐ No

### **What investment strategy does this financial product follow?**

The investment strategy guides investment decisions based on factors such as investments objectives and risk tolerance.

The Investment Adviser implements the ESG Criteria on a binding basis into its investment process, as described above.

In addition to applying the ESG Criteria as set forth above, the Investment Adviser may integrate ESG factors with traditional fundamental factors as part of its fundamental research process to seek to assess overall business quality and valuation, as well as potential risks. Traditional fundamental factors that the Investment Adviser may consider include, but are not limited to, cash flows, balance sheet leverage, return on invested capital, industry dynamics, earnings quality and profitability. ESG factors that the Investment Adviser may consider include, but are not limited to, carbon intensity and emissions profiles, workplace health and safety, community impact, governance practices and stakeholder relations, employee relations, board structure, transparency and management incentives. The identification of a risk related to an ESG factor will not necessarily exclude a particular security and/or sector that, in the Investment Adviser's view, is otherwise suitable for investment. The relevance of specific traditional fundamental factors and ESG factors to the fundamental investment process varies across asset classes, sectors and strategies. The Investment Adviser may utilise data sources provided by third party vendors and/or engage directly with companies when assessing the above factors. The Investment Adviser employs a dynamic fundamental investment process that considers a wide range of factors, and no one factor or consideration is determinative.

Additionally, this Portfolio leverages the Goldman Sachs Asset Management Global Stewardship Team's engagement initiatives. The Goldman Sachs Asset Management Global Stewardship Team focuses on proactive, outcomes-based engagement, in an attempt to promote best practices. Engagement initiatives are continually reviewed, enhanced and monitored to ensure they incorporate current issues and evolving views about key environmental, social, and governance topics. To guide engagement efforts, the Goldman Sachs Asset Management Global Stewardship Team creates an annual Focus List, which reflects the Goldman Sachs Asset Management Global Stewardship Team's thematic priorities and guides voting and engagement efforts.

### ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

- The Portfolio implements the exclusionary screens as set forth in the ESG Criteria, further described above.

### ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The ESG Criteria is not designed to reduce investments considered prior to the application of this strategy by a committed minimum amount. The exclusionary screens are intended to ensure that issuers engaged in certain activities are entirely excluded from the Portfolio and is expected to remove between 0-5% of the Reference Portfolio/Benchmark.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

***What is the policy to assess good governance practices of the investee companies?***

The Portfolio leverages Goldman Sachs Asset Management's proprietary approach to identifying and evaluating global norms violators and issuers that may be engaged in poor governance practices, in particular with respect to sound management structures, employee relations, remuneration of staff and tax compliance.

This proprietary approach seeks to identify, review, evaluate and monitor companies that are flagged by external data providers as being in violation of, or otherwise not aligned with, the United Nation Global Compact (UNGC) principles, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights as well as companies that have received high controversy scores (including significant governance controversies, severe labour rights controversies and severe tax compliance controversies). Following review of these external data inputs, companies that the Investment Adviser believes to have an ongoing and serious violation and/or are considered to not be following good governance practices with insufficient remediation will be excluded from the Portfolio. This list of companies will be reviewed on at least a semi-annual basis. The Investment Adviser may not be able to readily sell securities that are intended for exclusion from the Portfolio based on this review (for example, due to liquidity issues or for other reasons outside of the Investment Manager's control), however, will seek to divest as soon as possible in an orderly manner and in the best interests of Shareholders.

## What is the asset allocation planned for this financial product?

**Asset allocation** describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

At least 90% of investments will be aligned to the environmental and/or social characteristics promoted by this Portfolio, as noted above. Up to 10% may be held in cash and cash equivalents and derivatives (including but not limited to index futures). This Portfolio also commits to holding a minimum of 10% in sustainable investments.

**How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

This question is not applicable

## To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Whilst this Portfolio intends to make sustainable investments, it does not take into account the EU criteria for environmentally sustainable economic activities within the meaning of the EU Taxonomy and therefore its portfolio alignment with such EU Taxonomy is 0%. However, the position will be kept under review as the underlying rules are finalised and the availability of reliable data increases over time.

As noted above, whether investments made by this product are sustainable investments is determined by reference to the Investment Adviser's Sustainable Investment Framework for assessing the contribution of investments to environmental and/or social objectives. This product does not target one specific category of sustainable investments, but instead assesses all investments made pursuant to its overall investment strategy using the framework.

## Does the financial product invest in fossil gas and/or Nuclear energy related activities that comply with the EU Taxonomy<sup>1</sup>?

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

## What is the minimum share of investments in transitional and enabling activities?

Whilst this Portfolio intends to make sustainable investments, it does not take into account the EU criteria for environmentally sustainable economic activities within the meaning of the EU Taxonomy.

<sup>1</sup>Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

Whilst this Sub-Fund intends to make sustainable investments, it does not specifically commit to a minimum proportion of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy. Hence, the minimum commitment is 0%.

**What is the minimum share of socially sustainable investments?**

Whilst this product intends to make sustainable investments, it does not specifically commit to a minimum proportion of socially sustainable investments. Hence, the minimum commitment is 0%.

As noted above, whether investments made by this product are sustainable investments is determined by reference to the Investment Adviser's Sustainable Investment Framework for assessing the contribution of investments to environmental and/or social objectives. This product does not target one specific category of sustainable investments, but instead assesses all investments made pursuant to its overall investment strategy using the framework.

**What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?**

Investments included under “#2 Other” include cash and cash equivalents for liquidity purposes and derivatives (including but not limited to index futures) for efficient portfolio management. These may be used to achieve the investment objective of the Portfolio but neither promote the environmental or social characteristics of the Portfolio, nor qualify as sustainable investments. The percentage shown is expected to be the maximum which may be held in these instruments but the actual percentage may vary from time to time.

These financial instruments are not subject to any minimum environmental or social safeguards.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

Not applicable

**Where can I find more product specific information online?**

More product-specific information can be found on the website:

## Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name:  
Goldman Sachs Japan Equity Portfolio

Legal entity identifier:  
3IY3WJILLUMNTSO1EO23

### Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

| Does this financial product have a sustainable investment objective?                                                                                                                                                                                                                                                                                                              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

## What environmental and/or social characteristics are promoted by this financial product?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The Investment Adviser implements an approach to Environmental, Social and Governance (ESG) considerations into its fundamental investment process which consists of exclusionary screens as set forth below (the "ESG Criteria").

As part of the ESG investment process, the Investment Adviser will avoid investing in companies that are, in the opinion of the Investment Adviser, directly engaged in, and/or deriving significant revenues from the following activities, which, as at the date of the Prospectus, include but are not limited to:

- controversial weapons (including nuclear weapons);
- extraction and/or production of certain fossil fuels (including thermal coal, oil sands, arctic oil and gas);
- tobacco;
- adult entertainment;
- for-profit prisons;
- civilian firearms

Information on the criteria applied when assessing the aforementioned revenues may be found at the following [link](#).

The Portfolio will also seek to exclude from its investment universe companies the Investment Adviser believes to be violating the United Nations Global Compact's ten principles (which are widely recognised corporate sustainability principles that meet fundamental responsibilities in the areas of human rights, labour, environment and anti-corruption). Please refer to the summary of the policy to assess good governance practices below for further detail.

Adherence to these ESG Criteria will be based on thresholds pre-determined by the Investment Adviser in its sole discretion and will be applied to proprietary data and/or data provided by one or more third party vendor(s). The Investment Adviser will rely on third-party data that it believes to be reliable, but it does not guarantee the accuracy of such third-party data. The Investment Adviser, in its sole discretion, retains the right to disapply data provided by third party vendors where it deems the data to be inaccurate or inappropriate. In some cases, data on specific companies may not be available or may be estimated by the Investment Adviser using internal processes or reasonable estimates. Potential omissions from the ESG Criteria may include but are not limited to newly listed companies to which a third party vendor may not yet have data mapped. In the course of gathering data, vendors may make certain value judgements. The Investment Adviser does not verify those judgements, nor quantify their impact upon its analysis. The Investment Adviser in its sole discretion may periodically update its screening process, amend the type of activities that are excluded for investment or revise the thresholds applicable to any such activities.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Portfolio.

***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

The following indicators are used to measure the attainment of the environmental and/or social characteristics promoted by the Portfolio:

- % of companies in the Portfolio deriving significant revenues from:
  - controversial weapons (including nuclear weapons);
  - extraction and/or production of certain fossil fuels (including thermal coal, oil sands, arctic oil and gas);
  - tobacco;
  - adult entertainment;
  - for-profit prisons;
  - civilian firearms

- % of companies in the Portfolio the Investment Adviser believes to be violating the United Nations Global Compact ten principles.

***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

This question is not applicable as the Portfolio does not commit to making sustainable investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

This question is not applicable as the Portfolio does not commit to making sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

***- How have the indicators for adverse impacts on sustainability factors been taken into account?***

Not applicable.

***- How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Not applicable.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

Yes, this Portfolio considers principal adverse impacts on sustainability factors (PAIs) across the environmental and/or social pillars. PAIs are taken into account qualitatively through the application of the binding ESG Criteria outlined above. On a non-binding and materiality basis, PAIs are also considered through firm-wide and investment team specific engagement. Additional information on which PAIs are taken into account are available on our website and will also be available in the Portfolio's annual report pursuant to SFDR Article 11.

☐ No

### **What investment strategy does this financial product follow?**

The investment strategy guides investment decisions based on factors such as investments objectives and risk tolerance.

The Investment Adviser implements the ESG Criteria on a binding basis into its investment process, as described above.

In addition to applying the ESG Criteria as set forth above, the Investment Adviser may integrate ESG factors with traditional fundamental factors as part of its fundamental research process to seek to assess overall business quality and valuation, as well as potential risks. Traditional fundamental factors that the Investment Adviser may consider include, but are not limited to, cash flows, balance sheet leverage, return on invested capital, industry dynamics, earnings quality and profitability. ESG factors that the Investment Adviser may consider include, but are not limited to, carbon intensity and emissions profiles, workplace health and safety, community impact, governance practices and stakeholder relations, employee relations, board structure, transparency and management incentives. The identification of a risk related to an ESG factor will not necessarily exclude a particular security and/or sector that, in the Investment Adviser's view, is otherwise suitable for investment. The relevance of specific traditional fundamental factors and ESG factors to the fundamental investment process varies across asset classes, sectors and strategies. The Investment Adviser may utilise data sources provided by third party vendors and/or engage directly with companies when assessing the above factors. The Investment Adviser employs a dynamic fundamental investment process that considers a wide range of factors, and no one factor or consideration is determinative.

Additionally, this Portfolio leverages the Goldman Sachs Asset Management Global Stewardship Team's engagement initiatives. The Goldman Sachs Asset Management Global Stewardship Team focuses on proactive, outcomes-based engagement, in an attempt to promote best practices. Engagement initiatives are continually reviewed, enhanced and monitored to ensure they incorporate current issues and evolving views about key environmental, social, and governance topics. To guide engagement efforts, the Goldman Sachs Asset Management Global Stewardship Team creates an annual Focus List, which reflects the Goldman Sachs Asset Management Global Stewardship Team's thematic priorities and guides voting and engagement efforts.

### ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

- The Portfolio implements the exclusionary screens as set forth in the ESG Criteria, further described above.

### ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The ESG Criteria is not designed to reduce investments considered prior to the application of this strategy by a committed minimum amount. The exclusionary screens are intended to ensure that issuers engaged in certain activities are entirely excluded from the Portfolio and is expected to remove between 0-5% of the Reference Portfolio/Benchmark.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

***What is the policy to assess good governance practices of the investee companies?***

The Portfolio leverages Goldman Sachs Asset Management’s proprietary approach to identifying and evaluating global norms violators and issuers that may be engaged in poor governance practices, in particular with respect to sound management structures, employee relations, remuneration of staff and tax compliance.

This proprietary approach seeks to identify, review, evaluate and monitor companies that are flagged by external data providers as being in violation of, or otherwise not aligned with, the United Nation Global Compact (UNGC) principles, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights as well as companies that have received high controversy scores (including significant governance controversies, severe labour rights controversies and severe tax compliance controversies). Following review of these external data inputs, companies that the Investment Adviser believes to have an ongoing and serious violation and/or are considered to not be following good governance practices with insufficient remediation will be excluded from the Portfolio. This list of companies will be reviewed on at least a semi-annual basis. The Investment Adviser may not be able to readily sell securities that are intended for exclusion from the Portfolio based on this review (for example, due to liquidity issues or for other reasons outside of the Investment Manager’s control), however, will seek to divest as soon as possible in an orderly manner and in the best interests of Shareholders.

## What is the asset allocation planned for this financial product?

**Asset allocation** describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

At least 90% of investments will be aligned to the environmental and/or social characteristics promoted by this Portfolio, as noted above. Up to 10% may be held in cash and cash equivalents and derivatives (including but not limited to index futures).

**How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

This question is not applicable

## To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Portfolio does not currently commit to invest in any “sustainable investments” within the meaning of the EU Taxonomy and therefore its alignment with the Taxonomy is 0%. However, the position will be kept under review as the underlying rules are finalised and the availability of reliable data increases over time.

### Does the financial product invest in fossil gas and/or Nuclear energy related activities that comply with the EU Taxonomy?

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

\* For the purpose of these graphs, ‘sovereign bonds’ consist of all sovereign exposures

### What is the minimum share of investments in transitional and enabling activities?

As the Portfolio does not commit to invest any “sustainable investment” within the meaning of the EU Taxonomy, the minimum share of investments in transitional and enabling activities within the meaning of the EU Taxonomy is therefore also set at 0%.

<sup>1</sup>Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Portfolio promotes environmental and social characteristics but does not commit to making any sustainable investments. As a consequence, the Portfolio does not commit to a minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

**What is the minimum share of socially sustainable investments?**

Whilst this product intends to make sustainable investments, it does not specifically commit to a minimum proportion of socially sustainable investments. Hence, the minimum commitment is 0%.

As noted above, whether investments made by this product are sustainable investments is determined by reference to the Investment Advisor's Sustainable Investment Framework for assessing the contribution of investments to environmental and/or social objectives. This product does not target one specific category of sustainable investments, but instead assesses all investments made pursuant to its overall investment strategy using the framework.

**What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?**

Investments included under “#2 Other” include cash and cash equivalents for liquidity purposes and derivatives (including but not limited to index futures) for efficient portfolio management. These may be used to achieve the investment objective of the Portfolio but neither promote the environmental or social characteristics of the Portfolio, nor qualify as sustainable investments. The percentage shown is expected to be the maximum which may be held in these instruments but the actual percentage may vary from time to time.

These financial instruments are not subject to any minimum environmental or social safeguards.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

Not applicable

**Where can I find more product specific information online?**

### Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

| Does this financial product have a sustainable investment objective?                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

## What environmental and/or social characteristics are promoted by this financial product?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The Investment Adviser implements an approach to Environmental, Social and Governance (ESG) considerations into its fundamental investment process which consists of exclusionary screens as set forth below (the "ESG Criteria").

As part of the ESG investment process, the Investment Adviser will avoid investing in companies that are, in the opinion of the Investment Adviser, directly engaged in, and/or deriving significant revenues from the following activities, which, as at the date of the Prospectus, include but are not limited to:

- controversial weapons (including nuclear weapons);
- extraction and/or production of certain fossil fuels (including thermal coal, oil sands, arctic oil and gas);
- tobacco;
- adult entertainment;
- for-profit prisons;
- civilian firearms

Information on the criteria applied when assessing the aforementioned revenues may be found at the following [link](#).

The Portfolio will also seek to exclude from its investment universe companies the Investment Adviser believes to be violating the United Nations Global Compact's ten principles (which are widely recognised corporate sustainability principles that meet fundamental responsibilities in the areas of human rights, labour, environment and anti-corruption). Please refer to the summary of the policy to assess good governance practices below for further detail.

Adherence to these ESG Criteria will be based on thresholds pre-determined by the Investment Adviser in its sole discretion and will be applied to proprietary data and/or data provided by one or more third party vendor(s). The Investment Adviser will rely on third-party data that it believes to be reliable, but it does not guarantee the accuracy of such third-party data. The Investment Adviser, in its sole discretion, retains the right to disapply data provided by third party vendors where it deems the data to be inaccurate or inappropriate. In some cases, data on specific companies may not be available or may be estimated by the Investment Adviser using internal processes or reasonable estimates. Potential omissions from the ESG Criteria may include but are not limited to newly listed companies to which a third party vendor may not yet have data mapped. In the course of gathering data, vendors may make certain value judgements. The Investment Adviser does not verify those judgements, nor quantify their impact upon its analysis. The Investment Adviser in its sole discretion may periodically update its screening process, amend the type of activities that are excluded for investment or revise the thresholds applicable to any such activities.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Portfolio.

***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

The following indicators are used to measure the attainment of the environmental and/or social characteristics promoted by the Portfolio:

- % of companies in the Portfolio deriving significant revenues from:
  - controversial weapons (including nuclear weapons);
  - extraction and/or production of certain fossil fuels (including thermal coal, oil sands, arctic oil and gas);
  - tobacco;
  - adult entertainment;
  - for-profit prisons;
  - civilian firearms
  
- % of companies in the Portfolio the Investment Adviser believes to be violating the United Nations Global Compact ten principles.

***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

The consideration of investments made by the Portfolio as sustainable investments is determined by reference to the Investment Adviser's Sustainable Investment Framework, which includes an assessment as to whether the investment contributes to an environmental and/or social objective. Under this framework, an investment is considered to be contributing to an environmental and/or social objective via either a product or operational contribution.

Product contribution considers either i) the proportion of an issuer's revenue dedicated to an environmentally and/or socially sustainable impact category, ii) the alignment of a product to an environmental and/or social Sustainable Development Goal (SDG), iii) best-in-class scoring of an issue(r) as against environmental and/or social opportunities themes defined by an external data provider, or iv) the percentage of taxonomy aligned revenue of the issuer. Due to availability of reliable data, the taxonomy aligned revenue route will only be used as data improves.

Operational contribution takes a thematic approach, looking at the promotion of climate transition (environmental) within the operational framework of the issuer, inclusive growth (social) within the operational framework of the issuer, operational alignment to an environmental or social SDG, or the application of a best-in-class proprietary environmental and social score.

This Portfolio does not target a specific category of sustainable investments but assesses all investments made pursuant to its overall investment strategy using the Sustainable Investment Framework. Hence, the sustainable investments made by this Portfolio may contribute to a variety of environmental and/or social objectives of the sustainable investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

Issuers that are classified as contributing to a sustainable investment are also required to meet the do no significant harm (DNSH) criteria of the Investment Adviser's Sustainable Investment Framework. Any issuers that do not meet the DNSH test will not qualify as a sustainable investment. A proprietary quantitative or qualitative threshold for significant harm has been set for all 14 mandatory indicators relating to investee companies for adverse impacts on sustainability factors ("PAIs") set out in the regulatory technical standards supplementing SFDR.

Additionally, all issuers with a very severe controversy are considered to be causing significant harm and excluded from qualifying as a sustainable investment.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

***- How have the indicators for adverse impacts on sustainability factors been taken into account?***

This Portfolio considers principal adverse impacts on sustainability factors across environmental and social pillars. The PAIs are taken into account through the application of the DNSH principle outlined above for the determination of sustainable investments as well as qualitatively through the Portfolio's investment approach.

In regard to the consideration of the PAIs as part of the DNSH assessment of an issuer, as noted above a proprietary quantitative or qualitative threshold for significant harm has been set for all 14 mandatory PAIs relating to investee companies, and is assessed using information from an external data provider. These thresholds for significant harm have been set on a relative or absolute basis against each PAI depending on the Investment Adviser's assessment of the worst performing investments with respect to those PAIs. Where data is not available for a specific PAI a suitable proxy metric has been identified. If both PAI and proxy PAI data (where relevant) is not available and/or applicable to complete the DNSH assessment on an issuer, such issuer is generally excluded from qualifying as a sustainable investment.

Information on how the product considered principal adverse impacts on sustainability factors will be available in the Portfolio's Annual report.

***- How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The Portfolio leverages Goldman Sachs Asset Management's proprietary approach to identifying and evaluating companies which, amongst other factors, are not considered to be aligned with global norms as further described below. Following this assessment, any companies which are considered to be in violation of these global norms (including the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights) will be excluded from qualifying as a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

Yes, this Portfolio considers principal adverse impacts on sustainability factors (PAIs) across the environmental and/or social pillars through the DNSH assessment, as outlined above. PAIs are also taken into account qualitatively through the application of the binding ESG Criteria and on a non-binding and materiality basis they are also considered through firm-wide and investment team specific engagement. Additional information on which PAIs are taken into account are available on our website and will also be available in the Portfolio's annual report pursuant to SFDR Article 11.

☐ No

### **What investment strategy does this financial product follow?**

The investment strategy guides investment decisions based on factors such as investments objectives and risk tolerance.

The Investment Adviser implements the ESG Criteria on a binding basis into its investment process, as described above.

In addition to applying the ESG Criteria as set forth above, the Investment Adviser may integrate ESG factors with traditional fundamental factors as part of its fundamental research process to seek to assess overall business quality and valuation, as well as potential risks. Traditional fundamental factors that the Investment Adviser may consider include, but are not limited to, cash flows, balance sheet leverage, return on invested capital, industry dynamics, earnings quality and profitability. ESG factors that the Investment Adviser may consider include, but are not limited to, carbon intensity and emissions profiles, workplace health and safety, community impact, governance practices and stakeholder relations, employee relations, board structure, transparency and management incentives. The identification of a risk related to an ESG factor will not necessarily exclude a particular security and/or sector that, in the Investment Adviser's view, is otherwise suitable for investment. The relevance of specific traditional fundamental factors and ESG factors to the fundamental investment process varies across asset classes, sectors and strategies. The Investment Adviser may utilise data sources provided by third party vendors and/or engage directly with companies when assessing the above factors. The Investment Adviser employs a dynamic fundamental investment process that considers a wide range of factors, and no one factor or consideration is determinative.

Additionally, this Portfolio leverages the Goldman Sachs Asset Management Global Stewardship Team's engagement initiatives. The Goldman Sachs Asset Management Global Stewardship Team focuses on proactive, outcomes-based engagement, in an attempt to promote best practices. Engagement initiatives are continually reviewed, enhanced and monitored to ensure they incorporate current issues and evolving views about key environmental, social, and governance topics. To guide engagement efforts, the Goldman Sachs Asset Management Global Stewardship Team creates an annual Focus List, which reflects the Goldman Sachs Asset Management Global Stewardship Team's thematic priorities and guides voting and engagement efforts.

### ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

- The Portfolio implements the exclusionary screens as set forth in the ESG Criteria, further described above.

### ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The ESG Criteria is not designed to reduce investments considered prior to the application of this strategy by a committed minimum amount. The exclusionary screens are intended to ensure that issuers engaged in certain activities are entirely excluded from the Portfolio and is expected to remove between 0-5% of the Reference Portfolio/Benchmark.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

***What is the policy to assess good governance practices of the investee companies?***

The Portfolio leverages Goldman Sachs Asset Management's proprietary approach to identifying and evaluating global norms violators and issuers that may be engaged in poor governance practices, in particular with respect to sound management structures, employee relations, remuneration of staff and tax compliance.

This proprietary approach seeks to identify, review, evaluate and monitor companies that are flagged by external data providers as being in violation of, or otherwise not aligned with, the United Nation Global Compact (UNGC) principles, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights as well as companies that have received high controversy scores (including significant governance controversies, severe labour rights controversies and severe tax compliance controversies). Following review of these external data inputs, companies that the Investment Adviser believes to have an ongoing and serious violation and/or are considered to not be following good governance practices with insufficient remediation will be excluded from the Portfolio. This list of companies will be reviewed on at least a semi-annual basis. The Investment Adviser may not be able to readily sell securities that are intended for exclusion from the Portfolio based on this review (for example, due to liquidity issues or for other reasons outside of the Investment Manager's control), however, will seek to divest as soon as possible in an orderly manner and in the best interests of Shareholders.

## What is the asset allocation planned for this financial product?

**Asset allocation** describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

At least 90% of investments will be aligned to the environmental and/or social characteristics promoted by this Portfolio, as noted above. Up to 10% may be held in cash and cash equivalents and derivatives (including but not limited to index futures). This Portfolio also commits to holding a minimum of 20% in sustainable investments.

**How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

This question is not applicable

## To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Whilst this Portfolio intends to make sustainable investments, it does not take into account the EU criteria for environmentally sustainable economic activities within the meaning of the EU Taxonomy and therefore its portfolio alignment with such EU Taxonomy is 0%. However, the position will be kept under review as the underlying rules are finalised and the availability of reliable data increases over time.

As noted above, whether investments made by this product are sustainable investments is determined by reference to the Investment Adviser's Sustainable Investment Framework for assessing the contribution of investments to environmental and/or social objectives. This product does not target one specific category of sustainable investments, but instead assesses all investments made pursuant to its overall investment strategy using the framework.

## Does the financial product invest in fossil gas and/or Nuclear energy related activities that comply with the EU Taxonomy<sup>1</sup>?

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

## What is the minimum share of investments in transitional and enabling activities?

Whilst this Portfolio intends to make sustainable investments, it does not take into account the EU criteria for environmentally sustainable economic activities within the meaning of the EU Taxonomy.

<sup>1</sup>Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

Whilst this Sub-Fund intends to make sustainable investments, it does not specifically commit to a minimum proportion of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy. Hence, the minimum commitment is 0%.

**What is the minimum share of socially sustainable investments?**

Whilst this product intends to make sustainable investments, it does not specifically commit to a minimum proportion of socially sustainable investments. Hence, the minimum commitment is 0%.

As noted above, whether investments made by this product are sustainable investments is determined by reference to the Investment Adviser's Sustainable Investment Framework for assessing the contribution of investments to environmental and/or social objectives. This product does not target one specific category of sustainable investments, but instead assesses all investments made pursuant to its overall investment strategy using the framework.

**What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?**

Investments included under “#2 Other” include cash and cash equivalents for liquidity purposes and derivatives (including but not limited to index futures) for efficient portfolio management. These may be used to achieve the investment objective of the Portfolio but neither promote the environmental or social characteristics of the Portfolio, nor qualify as sustainable investments. The percentage shown is expected to be the maximum which may be held in these instruments but the actual percentage may vary from time to time.

These financial instruments are not subject to any minimum environmental or social safeguards.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

Not applicable

**Where can I find more product specific information online?**

## Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

| Does this financial product have a sustainable investment objective?                                                                                                                                                                                                                                                                                                                                                                                                                                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

## What environmental and/or social characteristics are promoted by this financial product?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The Investment Adviser implements an approach to Environmental, Social and Governance (ESG) considerations into its fundamental investment process which consists of exclusionary screens as set forth below (the "ESG Criteria").

As part of the ESG investment process, the Investment Adviser will avoid investing in companies that are, in the opinion of the Investment Adviser, directly engaged in, and/or deriving significant revenues from the following activities, which, as at the date of the Prospectus, include but are not limited to:

- controversial weapons (including nuclear weapons);
- extraction and/or production of certain fossil fuels (including thermal coal, oil sands, arctic oil and gas);
- tobacco;
- alcohol;
- adult entertainment;
- for-profit prisons;
- civilian firearms;
- gambling

Information on the criteria applied when assessing the aforementioned revenues may be found at the following [link](#).

The Portfolio will also seek to exclude from its investment universe companies the Investment Adviser believes to be violating the United Nations Global Compact's ten principles (which are widely recognised corporate sustainability principles that meet fundamental responsibilities in the areas of human rights, labour, environment and anti-corruption). Please refer to the summary of the policy to assess good governance practices below for further detail.

Adherence to these ESG Criteria will be based on thresholds pre-determined by the Investment Adviser in its sole discretion and will be applied to proprietary data and/or data provided by one or more third party vendor(s). The Investment Adviser will rely on third-party data that it believes to be reliable, but it does not guarantee the accuracy of such third-party data. The Investment Adviser, in its sole discretion, retains the right to disapply data provided by third party vendors where it deems the data to be inaccurate or inappropriate. In some cases, data on specific companies may not be available or may be estimated by the Investment Adviser using internal processes or reasonable estimates. Potential omissions from the ESG Criteria may include but are not limited to newly listed companies to which a third party vendor may not yet have data mapped. In the course of gathering data, vendors may make certain value judgements. The Investment Adviser does not verify those judgements, nor quantify their impact upon its analysis. The Investment Adviser in its sole discretion may periodically update its screening process, amend the type of activities that are excluded for investment or revise the thresholds applicable to any such activities.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Portfolio.

***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

The following indicators are used to measure the attainment of the environmental and/or social characteristics promoted by the Portfolio:

- % of companies in the Portfolio deriving significant revenues from:
  - controversial weapons (including nuclear weapons);
  - extraction and/or production of certain fossil fuels (including thermal coal, oil sands, arctic oil and gas);
  - tobacco;
  - alcohol;
  - adult entertainment;
  - for-profit prisons;
  - civilian firearms;
  - gambling
  -
  
- % of companies in the Portfolio the Investment Adviser believes to be violating the United Nations Global Compact ten principles.

***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

The consideration of investments made by the Portfolio as sustainable investments is determined by reference to the Investment Adviser's Sustainable Investment Framework, which includes an assessment as to whether the investment contributes to an environmental and/or social objective. Under this framework, an investment is considered to be contributing to an environmental and/or social objective via either a product or operational contribution.

Product contribution considers either i) the proportion of an issuer's revenue dedicated to an environmentally and/or socially sustainable impact category, ii) the alignment of a product to an environmental and/or social Sustainable Development Goal (SDG), iii) best-in-class scoring of an issue(r) as against environmental and/or social opportunities themes defined by an external data provider, or iv) the percentage of taxonomy aligned revenue of the issuer. Due to availability of reliable data, the taxonomy aligned revenue route will only be used as data improves.

Operational contribution takes a thematic approach, looking at the promotion of climate transition (environmental) within the operational framework of the issuer, inclusive growth (social) within the operational framework of the issuer, operational alignment to an environmental or social SDG, or the application of a best-in-class proprietary environmental and social score.

This Portfolio does not target a specific category of sustainable investments but assesses all investments made pursuant to its overall investment strategy using the Sustainable Investment Framework. Hence, the sustainable investments made by this Portfolio may contribute to a variety of environmental and/or social objectives of the sustainable investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

Issuers that are classified as contributing to a sustainable investment are also required to meet the do no significant harm (DNSH) criteria of the Investment Adviser's Sustainable Investment Framework. Any issuers that do not meet the DNSH test will not qualify as a sustainable investment. A proprietary quantitative or qualitative threshold for significant harm has been set for all 14 mandatory indicators relating to investee companies for adverse impacts on sustainability factors ("PAIs") set out in the regulatory technical standards supplementing SFDR.

Additionally, all issuers with a very severe controversy are considered to be causing significant harm and excluded from qualifying as a sustainable investment.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

**- How have the indicators for adverse impacts on sustainability factors been taken into account?**

This Portfolio considers principal adverse impacts on sustainability factors across environmental and social pillars. The PAIs are taken into account through the application of the DNSH principle outlined above for the determination of sustainable investments as well as qualitatively through the Portfolio's investment approach.

In regard to the consideration of the PAIs as part of the DNSH assessment of an issuer, as noted above a proprietary quantitative or qualitative threshold for significant harm has been set for all 14 mandatory PAIs relating to investee companies, and is assessed using information from an external data provider. These thresholds for significant harm have been set on a relative or absolute basis against each PAI depending on the Investment Adviser's assessment of the worst performing investments with respect to those PAIs. Where data is not available for a specific PAI a suitable proxy metric has been identified. If both PAI and proxy PAI data (where relevant) is not available and/or applicable to complete the DNSH assessment on an issuer, such issuer is generally excluded from qualifying as a sustainable investment.

Information on how the product considered principal adverse impacts on sustainability factors will be available in the Portfolio's Annual report.

**- How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

The Portfolio leverages Goldman Sachs Asset Management's proprietary approach to identifying and evaluating companies which, amongst other factors, are not considered to be aligned with global norms as further described below. Following this assessment, any companies which are considered to be in violation of these global norms (including the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights) will be excluded from qualifying as a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

Yes, this Portfolio considers principal adverse impacts on sustainability factors (PAIs) across the environmental and/or social pillars through the DNSH assessment, as outlined above. PAIs are also taken into account qualitatively through the application of the binding ESG Criteria and on a non-binding and materiality basis they are also considered through firm-wide and investment team specific engagement. Additional information on which PAIs are taken into account are available on our website and will also be available in the Portfolio's annual report pursuant to SFDR Article 11.

☐ No

### **What investment strategy does this financial product follow?**

The investment strategy guides investment decisions based on factors such as investments objectives and risk tolerance.

The Investment Adviser implements the ESG Criteria on a binding basis into its investment process, as described above.

Once the Investment Adviser determines that a company meets the Portfolio's ESG Criteria as described above, the Investment Adviser conducts a supplemental analysis of individual companies' corporate governance factors and a range of environmental and social factors that may vary across asset classes, sectors and strategies. This supplemental analysis will be conducted alongside traditional fundamental, bottom-up financial analysis of individual companies, using traditional fundamental metrics. The Investment Adviser may engage in active dialogues with company management teams to further inform investment decision-making and to foster best corporate governance practices using its fundamental and ESG analysis. The Portfolio may invest in a company prior to completion of the supplemental analysis or without engaging with company management. Instances in which the supplemental analysis may not be completed prior to investment include but are not limited to IPOs, in-kind transfers, corporate actions, and/or certain short-term holdings. The Investment Adviser employs a dynamic fundamental investment process that considers a wide range of factors, and no one factor or consideration is determinative. The identification of a risk related to an ESG factor will not necessarily exclude a particular security and/or sector that, in the Investment Adviser's view, is otherwise suitable for investment. The relevance of specific traditional fundamental factors and ESG factors to the fundamental investment process varies across asset classes, sectors and strategies.

Additionally, this Portfolio leverages the Goldman Sachs Asset Management Global Stewardship Team's engagement initiatives. The Goldman Sachs Asset Management Global Stewardship Team focuses on proactive, outcomes-based engagement, in an attempt to promote best practices. Engagement initiatives are continually reviewed, enhanced and monitored to ensure they incorporate current issues and evolving views about key environmental, social, and governance topics. To guide engagement efforts, the Goldman Sachs Asset Management Global Stewardship Team creates an annual Focus List, which reflects the Goldman Sachs Asset Management Global Stewardship Team's thematic priorities and guides voting and engagement efforts.

### ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

- The Portfolio implements the exclusionary screens as set forth in the ESG Criteria, further described above.

### ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The ESG Criteria is not designed to reduce investments considered prior to the application of this strategy by a committed minimum amount. The exclusionary screens are intended to ensure that issuers engaged in certain activities are entirely excluded from the Portfolio and is expected to remove between 5-15% of the Reference Portfolio/Benchmark.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

***What is the policy to assess good governance practices of the investee companies?***

The Portfolio leverages Goldman Sachs Asset Management's proprietary approach to identifying and evaluating global norms violators and issuers that may be engaged in poor governance practices, in particular with respect to sound management structures, employee relations, remuneration of staff and tax compliance.

This proprietary approach seeks to identify, review, evaluate and monitor companies that are flagged by external data providers as being in violation of, or otherwise not aligned with, the United Nation Global Compact (UNGC) principles, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights as well as companies that have received high controversy scores (including significant governance controversies, severe labour rights controversies and severe tax compliance controversies). Following review of these external data inputs, companies that the Investment Adviser believes to have an ongoing and serious violation and/or are considered to not be following good governance practices with insufficient remediation will be excluded from the Portfolio. This list of companies will be reviewed on at least a semi-annual basis. The Investment Adviser may not be able to readily sell securities that are intended for exclusion from the Portfolio based on this review (for example, due to liquidity issues or for other reasons outside of the Investment Manager's control), however, will seek to divest as soon as possible in an orderly manner and in the best interests of Shareholders.

## What is the asset allocation planned for this financial product?

**Asset allocation** describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

At least 90% of investments will be aligned to the environmental and/or social characteristics promoted by this Portfolio, as noted above. Up to 10% may be held in cash and cash equivalents and derivatives (including but not limited to index futures). This Portfolio also commits to holding a minimum of 20% in sustainable investments.

**How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

This question is not applicable

## To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Whilst this Portfolio intends to make sustainable investments, it does not take into account the EU criteria for environmentally sustainable economic activities within the meaning of the EU Taxonomy and therefore its portfolio alignment with such EU Taxonomy is 0%. However, the position will be kept under review as the underlying rules are finalised and the availability of reliable data increases over time.

As noted above, whether investments made by this product are sustainable investments is determined by reference to the Investment Adviser's Sustainable Investment Framework for assessing the contribution of investments to environmental and/or social objectives. This product does not target one specific category of sustainable investments, but instead assesses all investments made pursuant to its overall investment strategy using the framework.

## Does the financial product invest in fossil gas and/or Nuclear energy related activities that comply with the EU Taxonomy<sup>1</sup>?

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

## What is the minimum share of investments in transitional and enabling activities?

Whilst this Portfolio intends to make sustainable investments, it does not take into account the EU criteria for environmentally sustainable economic activities within the meaning of the EU Taxonomy.

<sup>1</sup>Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

Whilst this Sub-Fund intends to make sustainable investments, it does not specifically commit to a minimum proportion of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy. Hence, the minimum commitment is 0%.

**What is the minimum share of socially sustainable investments?**

Whilst this product intends to make sustainable investments, it does not specifically commit to a minimum proportion of socially sustainable investments. Hence, the minimum commitment is 0%.

As noted above, whether investments made by this product are sustainable investments is determined by reference to the Investment Adviser's Sustainable Investment Framework for assessing the contribution of investments to environmental and/or social objectives. This product does not target one specific category of sustainable investments, but instead assesses all investments made pursuant to its overall investment strategy using the framework.

**What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?**

Investments included under “#2 Other” include cash and cash equivalents for liquidity purposes and derivatives (including but not limited to index futures) for efficient portfolio management. These may be used to achieve the investment objective of the Portfolio but neither promote the environmental or social characteristics of the Portfolio, nor qualify as sustainable investments. The percentage shown is expected to be the maximum which may be held in these instruments but the actual percentage may vary from time to time.

These financial instruments are not subject to any minimum environmental or social safeguards.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

Not applicable

**Where can I find more product specific information online?**

### Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

| Does this financial product have a sustainable investment objective?                                                                                                                                                                                                                                                                                                              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

## What environmental and/or social characteristics are promoted by this financial product?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The Investment Adviser implements an approach to Environmental, Social and Governance (ESG) considerations into its fundamental investment process which consists of exclusionary screens as set forth below (the "ESG Criteria").

As part of the ESG investment process, the Investment Adviser will avoid investing in companies that are, in the opinion of the Investment Adviser, directly engaged in, and/or deriving significant revenues from the following activities, which, as at the date of the Prospectus, include but are not limited to:

- controversial weapons (including nuclear weapons);
- extraction and/or production of certain fossil fuels (including thermal coal, oil sands, arctic oil and gas);
- tobacco;
- adult entertainment;
- for-profit prisons;
- civilian firearms

Information on the criteria applied when assessing the aforementioned revenues may be found at the following [link](#).

The Portfolio will also seek to exclude from its investment universe companies the Investment Adviser believes to be violating the United Nations Global Compact's ten principles (which are widely recognised corporate sustainability principles that meet fundamental responsibilities in the areas of human rights, labour, environment and anti-corruption). Please refer to the summary of the policy to assess good governance practices below for further detail.

Adherence to these ESG Criteria will be based on thresholds pre-determined by the Investment Adviser in its sole discretion and will be applied to proprietary data and/or data provided by one or more third party vendor(s). The Investment Adviser will rely on third-party data that it believes to be reliable, but it does not guarantee the accuracy of such third-party data. The Investment Adviser, in its sole discretion, retains the right to disapply data provided by third party vendors where it deems the data to be inaccurate or inappropriate. In some cases, data on specific companies may not be available or may be estimated by the Investment Adviser using internal processes or reasonable estimates. Potential omissions from the ESG Criteria may include but are not limited to newly listed companies to which a third party vendor may not yet have data mapped. In the course of gathering data, vendors may make certain value judgements. The Investment Adviser does not verify those judgements, nor quantify their impact upon its analysis. The Investment Adviser in its sole discretion may periodically update its screening process, amend the type of activities that are excluded for investment or revise the thresholds applicable to any such activities.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Portfolio.

***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

The following indicators are used to measure the attainment of the environmental and/or social characteristics promoted by the Portfolio:

- % of companies in the Portfolio deriving significant revenues from:
  - controversial weapons (including nuclear weapons);
  - extraction and/or production of certain fossil fuels (including thermal coal, oil sands, arctic oil and gas);
  - tobacco;
  - adult entertainment;
  - for-profit prisons;
  - civilian firearms

- % of companies in the Portfolio the Investment Adviser believes to be violating the United Nations Global Compact ten principles.

***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

This question is not applicable as the Portfolio does not commit to making sustainable investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

This question is not applicable as the Portfolio does not commit to making sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

***- How have the indicators for adverse impacts on sustainability factors been taken into account?***

Not applicable.

***- How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Not applicable.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

Yes, this Portfolio considers principal adverse impacts on sustainability factors (PAIs) across the environmental and/or social pillars. PAIs are taken into account qualitatively through the application of the binding ESG Criteria outlined above. On a non-binding and materiality basis, PAIs are also considered through firm-wide and investment team specific engagement. Additional information on which PAIs are taken into account are available on our website and will also be available in the Portfolio's annual report pursuant to SFDR Article 11.

☐ No

### **What investment strategy does this financial product follow?**

The investment strategy guides investment decisions based on factors such as investments objectives and risk tolerance.

The Investment Adviser implements the ESG Criteria on a binding basis into its investment process, as described above.

In addition to applying the ESG Criteria as set forth above, the Investment Adviser may integrate ESG factors with traditional fundamental factors as part of its fundamental research process to seek to assess overall business quality and valuation, as well as potential risks. Traditional fundamental factors that the Investment Adviser may consider include, but are not limited to, cash flows, balance sheet leverage, return on invested capital, industry dynamics, earnings quality and profitability. ESG factors that the Investment Adviser may consider include, but are not limited to, carbon intensity and emissions profiles, workplace health and safety, community impact, governance practices and stakeholder relations, employee relations, board structure, transparency and management incentives. The identification of a risk related to an ESG factor will not necessarily exclude a particular security and/or sector that, in the Investment Adviser's view, is otherwise suitable for investment. The relevance of specific traditional fundamental factors and ESG factors to the fundamental investment process varies across asset classes, sectors and strategies. The Investment Adviser may utilise data sources provided by third party vendors and/or engage directly with companies when assessing the above factors. The Investment Adviser employs a dynamic fundamental investment process that considers a wide range of factors, and no one factor or consideration is determinative.

Additionally, this Portfolio leverages the Goldman Sachs Asset Management Global Stewardship Team's engagement initiatives. The Goldman Sachs Asset Management Global Stewardship Team focuses on proactive, outcomes-based engagement, in an attempt to promote best practices. Engagement initiatives are continually reviewed, enhanced and monitored to ensure they incorporate current issues and evolving views about key environmental, social, and governance topics. To guide engagement efforts, the Goldman Sachs Asset Management Global Stewardship Team creates an annual Focus List, which reflects the Goldman Sachs Asset Management Global Stewardship Team's thematic priorities and guides voting and engagement efforts.

### ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

- The Portfolio implements the exclusionary screens as set forth in the ESG Criteria, further described above.

### ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The ESG Criteria is not designed to reduce investments considered prior to the application of this strategy by a committed minimum amount. The exclusionary screens are intended to ensure that issuers engaged in certain activities are entirely excluded from the Portfolio and is expected to remove between 0-5% of the Reference Portfolio/Benchmark.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

***What is the policy to assess good governance practices of the investee companies?***

The Portfolio leverages Goldman Sachs Asset Management's proprietary approach to identifying and evaluating global norms violators and issuers that may be engaged in poor governance practices, in particular with respect to sound management structures, employee relations, remuneration of staff and tax compliance.

This proprietary approach seeks to identify, review, evaluate and monitor companies that are flagged by external data providers as being in violation of, or otherwise not aligned with, the United Nation Global Compact (UNGC) principles, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights as well as companies that have received high controversy scores (including significant governance controversies, severe labour rights controversies and severe tax compliance controversies). Following review of these external data inputs, companies that the Investment Adviser believes to have an ongoing and serious violation and/or are considered to not be following good governance practices with insufficient remediation will be excluded from the Portfolio. This list of companies will be reviewed on at least a semi-annual basis. The Investment Adviser may not be able to readily sell securities that are intended for exclusion from the Portfolio based on this review (for example, due to liquidity issues or for other reasons outside of the Investment Manager's control), however, will seek to divest as soon as possible in an orderly manner and in the best interests of Shareholders.

## What is the asset allocation planned for this financial product?

**Asset allocation** describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

At least 90% of investments will be aligned to the environmental and/or social characteristics promoted by this Portfolio, as noted above. Up to 10% may be held in cash and cash equivalents and derivatives (including but not limited to index futures).

**How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

This question is not applicable

## To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Portfolio does not currently commit to invest in any “sustainable investments” within the meaning of the EU Taxonomy and therefore its alignment with the Taxonomy is 0%. However, the position will be kept under review as the underlying rules are finalised and the availability of reliable data increases over time.

### Does the financial product invest in fossil gas and/or Nuclear energy related activities that comply with the EU Taxonomy?

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

\* For the purpose of these graphs, ‘sovereign bonds’ consist of all sovereign exposures

### What is the minimum share of investments in transitional and enabling activities?

As the Portfolio does not commit to invest any “sustainable investment” within the meaning of the EU Taxonomy, the minimum share of investments in transitional and enabling activities within the meaning of the EU Taxonomy is therefore also set at 0%.

<sup>1</sup>Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Portfolio promotes environmental and social characteristics but does not commit to making any sustainable investments. As a consequence, the Portfolio does not commit to a minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

**What is the minimum share of socially sustainable investments?**

This question is not applicable as the Portfolio does not commit to make socially sustainable investments.

**What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?**

Investments included under "#2 Other" include cash and cash equivalents for liquidity purposes and derivatives (including but not limited to index futures) for efficient portfolio management. These may be used to achieve the investment objective of the Portfolio but neither promote the environmental or social characteristics of the Portfolio, nor qualify as sustainable investments. The percentage shown is expected to be the maximum which may be held in these instruments but the actual percentage may vary from time to time.

These financial instruments are not subject to any minimum environmental or social safeguards.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

Not applicable

**Where can I find more product specific information online?**

More product-specific information can be found on the website:

## Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name:  
Goldman Sachs US Small Cap Equity Portfolio

Legal entity identifier:  
549300CS4O1C8HQEEB83

### Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

| Does this financial product have a sustainable investment objective?                                                                                                                                                                                                                                                                                                              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

## What environmental and/or social characteristics are promoted by this financial product?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The Investment Adviser implements an approach to Environmental, Social and Governance (ESG) considerations into its fundamental investment process which consists of exclusionary screens as set forth below (the "ESG Criteria").

As part of the ESG investment process, the Investment Adviser will avoid investing in companies that are, in the opinion of the Investment Adviser, directly engaged in, and/or deriving significant revenues from the following activities, which, as at the date of the Prospectus, include but are not limited to:

- controversial weapons (including nuclear weapons);
- extraction and/or production of certain fossil fuels (including thermal coal, oil sands, arctic oil and gas);
- tobacco;
- adult entertainment;
- for-profit prisons;
- civilian firearms

Information on the criteria applied when assessing the aforementioned revenues may be found at the following [link](#).

The Portfolio will also seek to exclude from its investment universe companies the Investment Adviser believes to be violating the United Nations Global Compact's ten principles (which are widely recognised corporate sustainability principles that meet fundamental responsibilities in the areas of human rights, labour, environment and anti-corruption). Please refer to the summary of the policy to assess good governance practices below for further detail.

Adherence to these ESG Criteria will be based on thresholds pre-determined by the Investment Adviser in its sole discretion and will be applied to proprietary data and/or data provided by one or more third party vendor(s). The Investment Adviser will rely on third-party data that it believes to be reliable, but it does not guarantee the accuracy of such third-party data. The Investment Adviser, in its sole discretion, retains the right to disapply data provided by third party vendors where it deems the data to be inaccurate or inappropriate. In some cases, data on specific companies may not be available or may be estimated by the Investment Adviser using internal processes or reasonable estimates. Potential omissions from the ESG Criteria may include but are not limited to newly listed companies to which a third party vendor may not yet have data mapped. In the course of gathering data, vendors may make certain value judgements. The Investment Adviser does not verify those judgements, nor quantify their impact upon its analysis. The Investment Adviser in its sole discretion may periodically update its screening process, amend the type of activities that are excluded for investment or revise the thresholds applicable to any such activities.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Portfolio.

***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

The following indicators are used to measure the attainment of the environmental and/or social characteristics promoted by the Portfolio:

- % of companies in the Portfolio deriving significant revenues from:
  - controversial weapons (including nuclear weapons);
  - extraction and/or production of certain fossil fuels (including thermal coal, oil sands, arctic oil and gas);
  - tobacco;
  - adult entertainment;
  - for-profit prisons;
  - civilian firearms

- % of companies in the Portfolio the Investment Adviser believes to be violating the United Nations Global Compact ten principles.

***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

This question is not applicable as the Portfolio does not commit to making sustainable investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

This question is not applicable as the Portfolio does not commit to making sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

***- How have the indicators for adverse impacts on sustainability factors been taken into account?***

Not applicable.

***- How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Not applicable.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

Yes, this Portfolio considers principal adverse impacts on sustainability factors (PAIs) across the environmental and/or social pillars. PAIs are taken into account qualitatively through the application of the binding ESG Criteria outlined above. On a non-binding and materiality basis, PAIs are also considered through firm-wide and investment team specific engagement. Additional information on which PAIs are taken into account are available on our website and will also be available in the Portfolio's annual report pursuant to SFDR Article 11.

☐ No

## What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investments objectives and risk tolerance.

The Investment Adviser implements the ESG Criteria on a binding basis into its investment process, as described above.

In addition to applying the ESG Criteria as set forth above, the Investment Adviser may integrate ESG factors with traditional fundamental factors as part of its fundamental research process to seek to assess overall business quality and valuation, as well as potential risks. Traditional fundamental factors that the Investment Adviser may consider include, but are not limited to, cash flows, balance sheet leverage, return on invested capital, industry dynamics, earnings quality and profitability. ESG factors that the Investment Adviser may consider include, but are not limited to, carbon intensity and emissions profiles, workplace health and safety, community impact, governance practices and stakeholder relations, employee relations, board structure, transparency and management incentives. The identification of a risk related to an ESG factor will not necessarily exclude a particular security and/or sector that, in the Investment Adviser's view, is otherwise suitable for investment. The relevance of specific traditional fundamental factors and ESG factors to the fundamental investment process varies across asset classes, sectors and strategies. The Investment Adviser may utilise data sources provided by third party vendors and/or engage directly with companies when assessing the above factors. The Investment Adviser employs a dynamic fundamental investment process that considers a wide range of factors, and no one factor or consideration is determinative.

Additionally, this Portfolio leverages the Goldman Sachs Asset Management Global Stewardship Team's engagement initiatives. The Goldman Sachs Asset Management Global Stewardship Team focuses on proactive, outcomes-based engagement, in an attempt to promote best practices. Engagement initiatives are continually reviewed, enhanced and monitored to ensure they incorporate current issues and evolving views about key environmental, social, and governance topics. To guide engagement efforts, the Goldman Sachs Asset Management Global Stewardship Team creates an annual Focus List, which reflects the Goldman Sachs Asset Management Global Stewardship Team's thematic priorities and guides voting and engagement efforts.

## *What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?*

- The Portfolio implements the exclusionary screens as set forth in the ESG Criteria, further described above.

## *What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?*

The ESG Criteria is not designed to reduce investments considered prior to the application of this strategy by a committed minimum amount. The exclusionary screens are intended to ensure that issuers engaged in certain activities are entirely excluded from the Portfolio and is expected to remove between 0-5% of the Reference Portfolio/Benchmark.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

***What is the policy to assess good governance practices of the investee companies?***

The Portfolio leverages Goldman Sachs Asset Management's proprietary approach to identifying and evaluating global norms violators and issuers that may be engaged in poor governance practices, in particular with respect to sound management structures, employee relations, remuneration of staff and tax compliance.

This proprietary approach seeks to identify, review, evaluate and monitor companies that are flagged by external data providers as being in violation of, or otherwise not aligned with, the United Nation Global Compact (UNGC) principles, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights as well as companies that have received high controversy scores (including significant governance controversies, severe labour rights controversies and severe tax compliance controversies). Following review of these external data inputs, companies that the Investment Adviser believes to have an ongoing and serious violation and/or are considered to not be following good governance practices with insufficient remediation will be excluded from the Portfolio. This list of companies will be reviewed on at least a semi-annual basis. The Investment Adviser may not be able to readily sell securities that are intended for exclusion from the Portfolio based on this review (for example, due to liquidity issues or for other reasons outside of the Investment Manager's control), however, will seek to divest as soon as possible in an orderly manner and in the best interests of Shareholders.

## What is the asset allocation planned for this financial product?

**Asset allocation** describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

At least 90% of investments will be aligned to the environmental and/or social characteristics promoted by this Portfolio, as noted above. Up to 10% may be held in cash and cash equivalents and derivatives (including but not limited to index futures).

**How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

This question is not applicable

## To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Portfolio does not currently commit to invest in any “sustainable investments” within the meaning of the EU Taxonomy and therefore its alignment with the Taxonomy is 0%. However, the position will be kept under review as the underlying rules are finalised and the availability of reliable data increases over time.

### Does the financial product invest in fossil gas and/or Nuclear energy related activities that comply with the EU Taxonomy?

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

### What is the minimum share of investments in transitional and enabling activities?

As the Portfolio does not commit to invest any “sustainable investment” within the meaning of the EU Taxonomy, the minimum share of investments in transitional and enabling activities within the meaning of the EU Taxonomy is therefore also set at 0%.

<sup>1</sup>Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Portfolio promotes environmental and social characteristics but does not commit to making any sustainable investments. As a consequence, the Portfolio does not commit to a minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

**What is the minimum share of socially sustainable investments?**

This question is not applicable as the Portfolio does not commit to make socially sustainable investments.

**What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?**

Investments included under "#2 Other" include cash and cash equivalents for liquidity purposes and derivatives (including but not limited to index futures) for efficient portfolio management. These may be used to achieve the investment objective of the Portfolio but neither promote the environmental or social characteristics of the Portfolio, nor qualify as sustainable investments. The percentage shown is expected to be the maximum which may be held in these instruments but the actual percentage may vary from time to time.

These financial instruments are not subject to any minimum environmental or social safeguards.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

Not applicable

**Where can I find more product specific information online?**

More product-specific information can be found on the website:

### Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

| Does this financial product have a sustainable investment objective?                                                                                                                                                                                                                                                                                                                                                           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

## What environmental and/or social characteristics are promoted by this financial product?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The Investment Adviser implements an approach to Environmental, Social and Governance (ESG) considerations into its fundamental investment process which consists of exclusionary screens as set forth below (the "ESG Criteria").

As part of the ESG investment process, the Investment Adviser will avoid investing in companies that are, in the opinion of the Investment Adviser, directly engaged in, and/or deriving significant revenues from the following activities, which, as at the date of the Prospectus, include but are not limited to:

- controversial weapons (including nuclear weapons);
- extraction and/or production of certain fossil fuels (including thermal coal, oil sands, arctic oil and gas);
- tobacco;
- adult entertainment;
- for-profit prisons;
- civilian firearms

Information on the criteria applied when assessing the aforementioned revenues may be found at the following [link](#).

The Portfolio will also seek to exclude from its investment universe companies the Investment Adviser believes to be violating the United Nations Global Compact's ten principles (which are widely recognised corporate sustainability principles that meet fundamental responsibilities in the areas of human rights, labour, environment and anti-corruption). Please refer to the summary of the policy to assess good governance practices below for further detail.

Adherence to these ESG Criteria will be based on thresholds pre-determined by the Investment Adviser in its sole discretion and will be applied to proprietary data and/or data provided by one or more third party vendor(s). The Investment Adviser will rely on third-party data that it believes to be reliable, but it does not guarantee the accuracy of such third-party data. The Investment Adviser, in its sole discretion, retains the right to disapply data provided by third party vendors where it deems the data to be inaccurate or inappropriate. In some cases, data on specific companies may not be available or may be estimated by the Investment Adviser using internal processes or reasonable estimates. Potential omissions from the ESG Criteria may include but are not limited to newly listed companies to which a third party vendor may not yet have data mapped. In the course of gathering data, vendors may make certain value judgements. The Investment Adviser does not verify those judgements, nor quantify their impact upon its analysis. The Investment Adviser in its sole discretion may periodically update its screening process, amend the type of activities that are excluded for investment or revise the thresholds applicable to any such activities.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Portfolio.

***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

The following indicators are used to measure the attainment of the environmental and/or social characteristics promoted by the Portfolio:

- % of companies in the Portfolio deriving significant revenues from:
  - controversial weapons (including nuclear weapons);
  - extraction and/or production of certain fossil fuels (including thermal coal, oil sands, arctic oil and gas);
  - tobacco;
  - adult entertainment;
  - for-profit prisons;
  - civilian firearms

- % of companies in the Portfolio the Investment Adviser believes to be violating the United Nations Global Compact ten principles.

***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

This question is not applicable as the Portfolio does not commit to make sustainable investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

This question is not applicable as the Portfolio does not commit to make sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

***- How have the indicators for adverse impacts on sustainability factors been taken into account?***

Not applicable.

***- How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Not applicable.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

Yes, this Portfolio considers principal adverse impacts on sustainability factors (PAIs) across the environmental and/or social pillars. PAIs are taken into account qualitatively through the application of the binding ESG Criteria outlined above. On a non-binding and materiality basis, PAIs are also considered through firm-wide and investment team specific engagement. Additional information on which PAIs are taken into account are available on our website and will also be available in the Portfolio's annual report pursuant to SFDR Article 11.

☐ No

## What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investments objectives and risk tolerance.

The Investment Adviser implements the ESG Criteria on a binding basis into its investment process, as described above.

In addition to applying the ESG Criteria as set forth above, the Investment Adviser may integrate ESG factors with traditional fundamental factors as part of its fundamental research process to seek to assess overall business quality and valuation, as well as potential risks. Traditional fundamental factors that the Investment Adviser may consider include, but are not limited to, cash flows, balance sheet leverage, return on invested capital, industry dynamics, earnings quality and profitability. ESG factors that the Investment Adviser may consider include, but are not limited to, carbon intensity and emissions profiles, workplace health and safety, community impact, governance practices and stakeholder relations, employee relations, board structure, transparency and management incentives. The identification of a risk related to an ESG factor will not necessarily exclude a particular security and/or sector that, in the Investment Adviser's view, is otherwise suitable for investment. The relevance of specific traditional fundamental factors and ESG factors to the fundamental investment process varies across asset classes, sectors and strategies. The Investment Adviser may utilise data sources provided by third party vendors and/or engage directly with companies when assessing the above factors. The Investment Adviser employs a dynamic fundamental investment process that considers a wide range of factors, and no one factor or consideration is determinative.

Additionally, this Portfolio leverages the Goldman Sachs Asset Management Global Stewardship Team's engagement initiatives. The Goldman Sachs Asset Management Global Stewardship Team focuses on proactive, outcomes-based engagement, in an attempt to promote best practices. Engagement initiatives are continually reviewed, enhanced and monitored to ensure they incorporate current issues and evolving views about key environmental, social, and governance topics. To guide engagement efforts, the Goldman Sachs Asset Management Global Stewardship Team creates an annual Focus List, which reflects the Goldman Sachs Asset Management Global Stewardship Team's thematic priorities and guides voting and engagement efforts.

## *What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?*

- The Portfolio implements the exclusionary screens as set forth in the ESG Criteria, further described above.

## *What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?*

The ESG Criteria is not designed to reduce investments considered prior to the application of this strategy by a committed minimum amount. The exclusionary screens are intended to ensure that issuers engaged in certain activities are entirely excluded from the Portfolio and is expected to remove between 0-5% of the Reference Portfolio/Benchmark.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

***What is the policy to assess good governance practices of the investee companies?***

The Portfolio leverages Goldman Sachs Asset Management's proprietary approach to identifying and evaluating global norms violators and issuers that may be engaged in poor governance practices, in particular with respect to sound management structures, employee relations, remuneration of staff and tax compliance.

This proprietary approach seeks to identify, review, evaluate and monitor companies that are flagged by external data providers as being in violation of, or otherwise not aligned with, the United Nation Global Compact (UNGC) principles, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights as well as companies that have received high controversy scores (including significant governance controversies, severe labour rights controversies and severe tax compliance controversies). Following review of these external data inputs, companies that the Investment Adviser believes to have an ongoing and serious violation and/or are considered to not be following good governance practices with insufficient remediation will be excluded from the Portfolio. This list of companies will be reviewed on at least a semi-annual basis. The Investment Adviser may not be able to readily sell securities that are intended for exclusion from the Portfolio based on this review (for example, due to liquidity issues or for other reasons outside of the Investment Manager's control), however, will seek to divest as soon as possible in an orderly manner and in the best interests of Shareholders.

## What is the asset allocation planned for this financial product?

**Asset allocation** describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

At least 90% of investments will be aligned to the environmental and/or social characteristics promoted by this Portfolio, as noted above. Up to 10% may be held in cash and cash equivalents and derivatives (including but not limited to index futures).

**How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

This question is not applicable

## To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Portfolio does not currently commit to invest in any “sustainable investments” within the meaning of the EU Taxonomy and therefore its alignment with the Taxonomy is 0%. However, the position will be kept under review as the underlying rules are finalised and the availability of reliable data increases over time.

## Does the financial product invest in fossil gas and/or Nuclear energy related activities that comply with the EU Taxonomy?

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

\* For the purpose of these graphs, ‘sovereign bonds’ consist of all sovereign exposures

## What is the minimum share of investments in transitional and enabling activities?

As the Portfolio does not commit to invest any “sustainable investment” within the meaning of the EU Taxonomy, the minimum share of investments in transitional and enabling activities within the meaning of the EU Taxonomy is therefore also set at 0%.

<sup>1</sup>Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Portfolio promotes environmental and social characteristics but does not commit to making any sustainable investments. As a consequence, the Portfolio does not commit to a minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

**What is the minimum share of socially sustainable investments?**

This question is not applicable as the Portfolio does not commit to make socially sustainable investments.

**What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?**

Investments included under “#2 Other” include cash and cash equivalents for liquidity purposes and derivatives (including but not limited to index futures) for efficient portfolio management. These may be used to achieve the investment objective of the Portfolio but neither promote the environmental or social characteristics of the Portfolio, nor qualify as sustainable investments. The percentage shown is expected to be the maximum which may be held in these instruments but the actual percentage may vary from time to time.

These financial instruments are not subject to any minimum environmental or social safeguards.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

An index has not been designated as a reference benchmark to determine whether this financial product is aligned with the environmental or social characteristics that it promotes.

**Where can I find more product specific information online?**

More product-specific information can be found on the website:

### Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

| Does this financial product have a sustainable investment objective?                                                                                                                                                                                                                                                                                                              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

## What environmental and/or social characteristics are promoted by this financial product?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The Investment Adviser implements an approach to Environmental, Social and Governance (ESG) considerations into its fundamental investment process which consists of exclusionary screens as set forth below (the "ESG Criteria").

As part of the ESG investment process, the Investment Adviser will avoid investing in companies that are, in the opinion of the Investment Adviser, directly engaged in, and/or deriving significant revenues from the following activities, which, as at the date of the Prospectus, include but are not limited to:

- controversial weapons (including nuclear weapons);
- extraction and/or production of certain fossil fuels (including thermal coal, oil sands, arctic oil and gas);
- tobacco;
- adult entertainment;
- for-profit prisons;
- civilian firearms

Information on the criteria applied when assessing the aforementioned revenues may be found at the following [link](#).

The Portfolio will also seek to exclude from its investment universe companies the Investment Adviser believes to be violating the United Nations Global Compact's ten principles (which are widely recognised corporate sustainability principles that meet fundamental responsibilities in the areas of human rights, labour, environment and anti-corruption). Please refer to the summary of the policy to assess good governance practices below for further detail.

Adherence to these ESG Criteria will be based on thresholds pre-determined by the Investment Adviser in its sole discretion and will be applied to proprietary data and/or data provided by one or more third party vendor(s). The Investment Adviser will rely on third-party data that it believes to be reliable, but it does not guarantee the accuracy of such third-party data. The Investment Adviser, in its sole discretion, retains the right to disapply data provided by third party vendors where it deems the data to be inaccurate or inappropriate. In some cases, data on specific companies may not be available or may be estimated by the Investment Adviser using internal processes or reasonable estimates. Potential omissions from the ESG Criteria may include but are not limited to newly listed companies to which a third party vendor may not yet have data mapped. In the course of gathering data, vendors may make certain value judgements. The Investment Adviser does not verify those judgements, nor quantify their impact upon its analysis. The Investment Adviser in its sole discretion may periodically update its screening process, amend the type of activities that are excluded for investment or revise the thresholds applicable to any such activities.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Portfolio.

***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

The following indicators are used to measure the attainment of the environmental and/or social characteristics promoted by the Portfolio:

- % of companies in the Portfolio deriving significant revenues from:
  - controversial weapons (including nuclear weapons);
  - extraction and/or production of certain fossil fuels (including thermal coal, oil sands, arctic oil and gas);
  - tobacco;
  - adult entertainment;
  - for-profit prisons;
  - civilian firearms

- % of companies in the Portfolio the Investment Adviser believes to be violating the United Nations Global Compact ten principles.

***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

This question is not applicable as the Portfolio does not commit to making sustainable investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

This question is not applicable as the Portfolio does not commit to making sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

***- How have the indicators for adverse impacts on sustainability factors been taken into account?***

Not applicable.

***- How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Not applicable.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

Yes, this Portfolio considers principal adverse impacts on sustainability factors (PAIs) across the environmental and/or social pillars. PAIs are taken into account qualitatively through the application of the binding ESG Criteria outlined above. On a non-binding and materiality basis, PAIs are also considered through firm-wide and investment team specific engagement. Additional information on which PAIs are taken into account are available on our website and will also be available in the Portfolio's annual report pursuant to SFDR Article 11.

☐ No

## What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investments objectives and risk tolerance.

The Investment Adviser implements the ESG Criteria on a binding basis into its investment process, as described above.

In addition to applying the ESG Criteria as set forth above, the Investment Adviser may integrate ESG factors with traditional fundamental factors as part of its fundamental research process to seek to assess overall business quality and valuation, as well as potential risks. Traditional fundamental factors that the Investment Adviser may consider include, but are not limited to, cash flows, balance sheet leverage, return on invested capital, industry dynamics, earnings quality and profitability. ESG factors that the Investment Adviser may consider include, but are not limited to, carbon intensity and emissions profiles, workplace health and safety, community impact, governance practices and stakeholder relations, employee relations, board structure, transparency and management incentives. The identification of a risk related to an ESG factor will not necessarily exclude a particular security and/or sector that, in the Investment Adviser's view, is otherwise suitable for investment. The relevance of specific traditional fundamental factors and ESG factors to the fundamental investment process varies across asset classes, sectors and strategies. The Investment Adviser may utilise data sources provided by third party vendors and/or engage directly with companies when assessing the above factors. The Investment Adviser employs a dynamic fundamental investment process that considers a wide range of factors, and no one factor or consideration is determinative.

Additionally, this Portfolio leverages the Goldman Sachs Asset Management Global Stewardship Team's engagement initiatives. The Goldman Sachs Asset Management Global Stewardship Team focuses on proactive, outcomes-based engagement, in an attempt to promote best practices. Engagement initiatives are continually reviewed, enhanced and monitored to ensure they incorporate current issues and evolving views about key environmental, social, and governance topics. To guide engagement efforts, the Goldman Sachs Asset Management Global Stewardship Team creates an annual Focus List, which reflects the Goldman Sachs Asset Management Global Stewardship Team's thematic priorities and guides voting and engagement efforts.

## *What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?*

- The Portfolio implements the exclusionary screens as set forth in the ESG Criteria, further described above.

## *What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?*

The ESG Criteria is not designed to reduce investments considered prior to the application of this strategy by a committed minimum amount. The exclusionary screens are intended to ensure that issuers engaged in certain activities are entirely excluded from the Portfolio and is expected to remove between 0-5% of the Reference Portfolio/Benchmark.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

***What is the policy to assess good governance practices of the investee companies?***

The Portfolio leverages Goldman Sachs Asset Management's proprietary approach to identifying and evaluating global norms violators and issuers that may be engaged in poor governance practices, in particular with respect to sound management structures, employee relations, remuneration of staff and tax compliance.

This proprietary approach seeks to identify, review, evaluate and monitor companies that are flagged by external data providers as being in violation of, or otherwise not aligned with, the United Nation Global Compact (UNGC) principles, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights as well as companies that have received high controversy scores (including significant governance controversies, severe labour rights controversies and severe tax compliance controversies). Following review of these external data inputs, companies that the Investment Adviser believes to have an ongoing and serious violation and/or are considered to not be following good governance practices with insufficient remediation will be excluded from the Portfolio. This list of companies will be reviewed on at least a semi-annual basis. The Investment Adviser may not be able to readily sell securities that are intended for exclusion from the Portfolio based on this review (for example, due to liquidity issues or for other reasons outside of the Investment Manager's control), however, will seek to divest as soon as possible in an orderly manner and in the best interests of Shareholders.

## What is the asset allocation planned for this financial product?

**Asset allocation** describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

At least 90% of investments will be aligned to the environmental and/or social characteristics promoted by this Portfolio, as noted above. Up to 10% may be held in cash and cash equivalents and derivatives (including but not limited to index futures).

**How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

This question is not applicable

## To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Portfolio does not currently commit to invest in any “sustainable investments” within the meaning of the EU Taxonomy and therefore its alignment with the Taxonomy is 0%. However, the position will be kept under review as the underlying rules are finalised and the availability of reliable data increases over time.

### Does the financial product invest in fossil gas and/or Nuclear energy related activities that comply with the EU Taxonomy?

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

\* For the purpose of these graphs, ‘sovereign bonds’ consist of all sovereign exposures

### What is the minimum share of investments in transitional and enabling activities?

As the Portfolio does not commit to invest any “sustainable investment” within the meaning of the EU Taxonomy, the minimum share of investments in transitional and enabling activities within the meaning of the EU Taxonomy is therefore also set at 0%.

<sup>1</sup>Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Portfolio promotes environmental and social characteristics but does not commit to making any sustainable investments. As a consequence, the Portfolio does not commit to a minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

**What is the minimum share of socially sustainable investments?**

This question is not applicable as the Portfolio does not commit to make socially sustainable investments.

**What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?**

Investments included under “#2 Other” include cash and cash equivalents for liquidity purposes and derivatives (including but not limited to index futures) for efficient portfolio management. These may be used to achieve the investment objective of the Portfolio but neither promote the environmental or social characteristics of the Portfolio, nor qualify as sustainable investments. The percentage shown is expected to be the maximum which may be held in these instruments but the actual percentage may vary from time to time.

These financial instruments are not subject to any minimum environmental or social safeguards.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

Not applicable

**Where can I find more product specific information online?**

More product-specific information can be found on the website:

### Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

| Does this financial product have a sustainable investment objective?                                                                                                                                                                                                                                                                                                                                                           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

## What environmental and/or social characteristics are promoted by this financial product?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The Investment Adviser implements an approach to Environmental, Social and Governance (ESG) considerations into its fundamental investment process by investing in renewable energy companies that contribute to the decarbonisation of the economy by generating, producing, transmitting, and/or distributing renewable energy (the "ESG Criteria"). Renewable energy companies refers to companies that are either:

- classified by the Nomenclature of Economic Activities ("NACE") as Electricity, Gas, Steam and Air Conditioning Supply;
- in the S&P Global Clean Energy Index, the Eagle Global Renewables Infrastructure Index, the Eagle North American Renewables Infrastructure Index or
- have 50% of their assets committed to or derived from income, earnings, sales or profits of renewable energy electricity generation (wind, solar, hydrogen, geothermal, biomass, etc.), renewable storage, electric transmission and distribution, renewable energy equipment development and manufacturing, electrified transport, biofuel production, carbon capture, or energy efficiency solutions (including smart grid).

### ***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

- % of companies in the Portfolio achieving a lower average carbon intensity than the benchmark, as defined as the Energy & Utilities sleeve of the MSCI All Country World Index (ACWI).

For avoidance of doubt, the Portfolio is not managed in view of achieving the long-term global warming objectives of the Paris Agreement.

### ***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

The consideration of investments made by the Portfolio as sustainable investments is determined by reference to the Investment Adviser's Sustainable Investment Framework, which includes an assessment as to whether the investment contributes to an environmental and/or social objective. Under this framework, an investment is considered to be contributing to an environmental and/or social objective via either a product or operational contribution.

Product contribution considers either i) the proportion of an issuer's revenue dedicated to an environmentally and/or socially sustainable impact category, ii) the alignment of a product to an environmental and/or social Sustainable Development Goal (SDG), iii) best-in-class scoring of an issue(r) as against environmental and/or social opportunities themes defined by an external data provider, or iv) the percentage of taxonomy aligned revenue of the issuer. Due to availability of reliable data, the taxonomy aligned revenue route will only be used as data improves.

Operational contribution takes a thematic approach, looking at the promotion of climate transition (environmental) within the operational framework of the issuer, inclusive growth (social) within the operational framework of the issuer, operational alignment to an environmental or social SDG, or the application of a best-in-class proprietary environmental and social score.

This Portfolio does not target a specific category of sustainable investments but assesses all investments made pursuant to its overall investment strategy using the Sustainable Investment Framework. Hence, the sustainable investments made by this Portfolio may contribute to a variety of environmental and/or social objectives.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

Issuers that are classified as contributing to a sustainable investment are also required to meet the do no significant harm (DNSH) criteria of the Investment Adviser's Sustainable Investment Framework. Any issuers that do not meet the DNSH test will not qualify as a sustainable investment. A proprietary quantitative or qualitative threshold for significant harm has been set for all 14 mandatory indicators relating to investee companies for adverse impacts on sustainability factors ("PAIs") set out in the regulatory technical standards supplementing SFDR.

Additionally, all issuers with a very severe controversy are considered to be causing significant harm and excluded from qualifying as a sustainable investment.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

***- How have the indicators for adverse impacts on sustainability factors been taken into account?***

This Portfolio considers principal adverse impacts on sustainability factors across environmental and social pillars. The PAIs are taken into account through the application of the DNSH principle outlined above for the determination of sustainable investments as well as qualitatively through the Portfolio's investment approach.

In regard to the consideration of the PAIs as part of the DNSH assessment of an issuer, as noted above a proprietary quantitative or qualitative threshold for significant harm has been set for all 14 mandatory PAIs relating to investee companies, and is assessed using information from an external data provider. These thresholds for significant harm have been set on a relative or absolute basis against each PAI depending on the Investment Adviser's assessment of the worst performing investments with respect to those PAIs. Where data is not available for a specific PAI a suitable proxy metric has been identified. If both PAI and proxy PAI data (where relevant) is not available and/or applicable to complete the DNSH assessment on an issuer, such issuer is generally excluded from qualifying as a sustainable investment.

Information on how the product considered principal adverse impacts on sustainability factors will be available in the Portfolio's Annual report.

***- How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The Portfolio leverages Goldman Sachs Asset Management's proprietary approach to identifying and evaluating companies which, amongst other factors, are not considered to be aligned with global norms as further described below. Following this assessment, any companies which are considered to be in violation of these global norms (including the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights) will be excluded from qualifying as a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

Yes, this Portfolio considers principal adverse impacts on sustainability factors (PAIs) across the environmental and/or social pillars through the DNSH assessment, as outlined above. PAIs are also taken into account qualitatively through the application of the binding ESG Criteria and on a non-binding and materiality basis they are also considered through firm-wide and investment team specific engagement. Additional information on which PAIs are taken into account are available on our website and will also be available in the Portfolio's annual report pursuant to SFDR Article 11.

☐ No

## What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investments objectives and risk tolerance.

The Investment Adviser implements the ESG Criteria on a binding basis into its investment process, as described above.

In addition to applying the ESG Criteria as set forth above, the Investment Adviser may integrate ESG factors with traditional fundamental factors as part of its fundamental research process to seek to assess overall business quality and valuation, as well as potential risks. Traditional fundamental factors that the Investment Adviser may consider include, but are not limited to, cash flows, balance sheet leverage, return on invested capital, industry dynamics, earnings quality and profitability. ESG factors that the Investment Adviser may consider include, but are not limited to, carbon intensity and emissions profiles, workplace health and safety, community impact, governance practices and stakeholder relations, employee relations, board structure, transparency and management incentives. The identification of a risk related to an ESG factor will not necessarily exclude a particular security and/or sector that, in the Investment Adviser's view, is otherwise suitable for investment. The relevance of specific traditional fundamental factors and ESG factors to the fundamental investment process varies across asset classes, sectors and strategies. The Investment Adviser may utilise data sources provided by third party vendors and/or engage directly with companies when assessing the above factors. The Investment Adviser employs a dynamic fundamental investment process that considers a wide range of factors, and no one factor or consideration is determinative.

The Investment Adviser will rely on third-party data that it believes to be reliable, but it does not guarantee the accuracy of such third-party data. The Investment Adviser, in its sole discretion, retains the right to disapply data provided by third party vendors where it deems the data to be inaccurate or inappropriate. In some cases, data on specific companies may not be available or may be estimated by the Investment Adviser using internal processes or reasonable estimates. Potential omissions from the ESG criteria may include but are not limited to newly listed companies to which a third party vendor may not yet have data mapped. In the course of gathering data, vendors may make certain value judgements. The Investment Adviser does not verify those judgements, nor quantify their impact upon its analysis.

Additionally, this Portfolio leverages the Goldman Sachs Asset Management Global Stewardship Team's engagement initiatives. The Goldman Sachs Asset Management Global Stewardship Team focuses on proactive, outcomes-based engagement, in an attempt to promote best practices. Engagement initiatives are continually reviewed, enhanced and monitored to ensure they incorporate current issues and evolving views about key environmental, social, and governance topics. To guide engagement efforts, the Goldman Sachs Asset Management Global Stewardship Team creates an annual Focus List, which reflects the Goldman Sachs Asset Management Global Stewardship Team's thematic priorities and guides voting and engagement efforts.

## ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

The Portfolio commits to investing in renewable energy companies (as defined above) that contribute to the decarbonisation of the economy by generating, producing, transmitting, and/or distributing renewable energy.

## ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The ESG Criteria is not designed to reduce investments considered prior to the application of this strategy by a committed minimum amount. The exclusionary screens are intended to ensure that issuers engaged in certain activities are entirely excluded from the Portfolio and is expected to remove between ~0-2% (UNGC Only) of the Reference Portfolio/Benchmark.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

***What is the policy to assess good governance practices of the investee companies?***

The Portfolio leverages Goldman Sachs Asset Management's proprietary approach to identifying and evaluating global norms violators and issuers that may be engaged in poor governance practices, in particular with respect to sound management structures, employee relations, remuneration of staff and tax compliance.

This proprietary approach seeks to identify, review, evaluate and monitor companies that are flagged by external data providers as being in violation of, or otherwise not aligned with, the United Nation Global Compact (UNGC) principles, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights as well as companies that have received high controversy scores (including significant governance controversies, severe labour rights controversies and severe tax compliance controversies). Following review of these external data inputs, companies that the Investment Adviser believes to have an ongoing and serious violation and/or are considered to not be following good governance practices with insufficient remediation will be excluded from the Portfolio. This list of companies will be reviewed on at least a semi-annual basis. The Investment Adviser may not be able to readily sell securities that are intended for exclusion from the Portfolio based on this review (for example, due to liquidity issues or for other reasons outside of the Investment Manager's control), however, will seek to divest as soon as possible in an orderly manner and in the best interests of Shareholders.

## What is the asset allocation planned for this financial product?

**Asset allocation** describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

At least 90% of investments will be aligned to the environmental and/or social characteristics promoted by this Portfolio, as noted above. Up to 10% may be held in cash and cash equivalents and derivatives (including but not limited to index futures). This Portfolio also commits to holding a minimum of 35% in sustainable investments.

**How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

This question is not applicable

## To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Whilst this Portfolio intends to make sustainable investments, it does not take into account the EU criteria for environmentally sustainable economic activities within the meaning of the EU Taxonomy and therefore its portfolio alignment with such EU Taxonomy is 0%. However, the position will be kept under review as the underlying rules are finalised and the availability of reliable data increases over time.

As noted above, whether investments made by this product are sustainable investments is determined by reference to the Investment Adviser's Sustainable Investment Framework for assessing the contribution of investments to environmental and/or social objectives. This product does not target one specific category of sustainable investments, but instead assesses all investments made pursuant to its overall investment strategy using the framework.

## Does the financial product invest in fossil gas and/or Nuclear energy related activities that comply with the EU Taxonomy<sup>1</sup>?

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

## What is the minimum share of investments in transitional and enabling activities?

Whilst this Portfolio intends to make sustainable investments, it does not take into account the EU criteria for environmentally sustainable economic activities within the meaning of the EU Taxonomy.

<sup>1</sup>Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The minimum share of investments in transitional and enabling activities within the meaning of the EU Taxonomy is 0%.

**What is the minimum share of socially sustainable investments?**

Whilst this product intends to make sustainable investments, it does not specifically commit to a minimum proportion of socially sustainable investments. Hence, the minimum commitment is 0%.

As noted above, whether investments made by this product are sustainable investments is determined by reference to the Investment Adviser's Sustainable Investment Framework for assessing the contribution of investments to environmental and/or social objectives. This product does not target one specific category of sustainable investments, but instead assesses all investments made pursuant to its overall investment strategy using the framework.

**What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?**

Investments included under “#2 Other” include cash and cash equivalents for liquidity purposes and derivatives (including but not limited to index futures) for efficient portfolio management. These may be used to achieve the investment objective of the Portfolio but neither promote the environmental or social characteristics of the Portfolio, nor qualify as sustainable investments. The percentage shown is expected to be the maximum which may be held in these instruments but the actual percentage may vary from time to time.

These financial instruments are not subject to any minimum environmental or social safeguards.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

Not applicable

**Where can I find more product specific information online?**

## Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name:  
Goldman Sachs Global Infrastructure Equity Portfolio

Legal entity identifier:  
222100ADZQOI2AF5CH32

### Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

| Does this financial product have a sustainable investment objective?                                                                                                                                                                                                                                                                                                              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

## What environmental and/or social characteristics are promoted by this financial product?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The Investment Adviser implements an approach to Environmental, Social and Governance (ESG) considerations into its fundamental investment process which consists of exclusionary screens as set forth below (the "ESG Criteria").

As part of the ESG investment process, the Investment Adviser will avoid investing in companies that are, in the opinion of the Investment Adviser, directly engaged in, and/or deriving significant revenues from the following activities, which, as at the date of the Prospectus, include but are not limited to:

- controversial weapons (including nuclear weapons);
- extraction and/or production of certain fossil fuels (including thermal coal, oil sands, arctic oil and gas);
- tobacco;
- adult entertainment;
- for-profit prisons;
- civilian firearms

Information on the criteria applied when assessing the aforementioned revenues may be found at the following [link](#).

The Portfolio will also seek to exclude from its investment universe companies the Investment Adviser believes to be violating the United Nations Global Compact's ten principles (which are widely recognised corporate sustainability principles that meet fundamental responsibilities in the areas of human rights, labour, environment and anti-corruption). Please refer to the summary of the policy to assess good governance practices below for further detail.

Adherence to these ESG Criteria will be based on thresholds pre-determined by the Investment Adviser in its sole discretion and will be applied to proprietary data and/or data provided by one or more third party vendor(s). The Investment Adviser will rely on third-party data that it believes to be reliable, but it does not guarantee the accuracy of such third-party data. The Investment Adviser, in its sole discretion, retains the right to disapply data provided by third party vendors where it deems the data to be inaccurate or inappropriate. In some cases, data on specific companies may not be available or may be estimated by the Investment Adviser using internal processes or reasonable estimates. Potential omissions from the ESG Criteria may include but are not limited to newly listed companies to which a third party vendor may not yet have data mapped. In the course of gathering data, vendors may make certain value judgements. The Investment Adviser does not verify those judgements, nor quantify their impact upon its analysis. The Investment Adviser in its sole discretion may periodically update its screening process, amend the type of activities that are excluded for investment or revise the thresholds applicable to any such activities.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Portfolio.

***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

The following indicators are used to measure the attainment of the environmental and/or social characteristics promoted by the Portfolio:

- % of companies in the Portfolio deriving significant revenues from:
  - controversial weapons (including nuclear weapons);
  - extraction and/or production of certain fossil fuels (including thermal coal, oil sands, arctic oil and gas);
  - tobacco;
  - adult entertainment;
  - for-profit prisons;
  - civilian firearms

- % of companies in the Portfolio the Investment Adviser believes to be violating the United Nations Global Compact ten principles.

***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

This question is not applicable as the Portfolio does not commit to making sustainable investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

This question is not applicable as the Portfolio does not commit to making sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

***- How have the indicators for adverse impacts on sustainability factors been taken into account?***

Not applicable.

***- How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Not applicable.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

Yes, this Portfolio considers principal adverse impacts on sustainability factors (PAIs) across the environmental and/or social pillars. PAIs are taken into account qualitatively through the application of the binding ESG Criteria outlined above. On a non-binding and materiality basis, PAIs are also considered through firm-wide and investment team specific engagement. Additional information on which PAIs are taken into account are available on our website and will also be available in the Portfolio's annual report pursuant to SFDR Article 11.

☐ No

### **What investment strategy does this financial product follow?**

The investment strategy guides investment decisions based on factors such as investments objectives and risk tolerance.

The Investment Adviser implements the ESG Criteria on a binding basis into its investment process, as described above.

In addition to applying the ESG Criteria as set forth above, the Investment Adviser may integrate ESG factors with traditional fundamental factors as part of its fundamental research process to seek to assess overall business quality and valuation, as well as potential risks. Traditional fundamental factors that the Investment Adviser may consider include, but are not limited to, cash flows, balance sheet leverage, return on invested capital, industry dynamics, earnings quality and profitability. ESG factors that the Investment Adviser may consider include, but are not limited to, carbon intensity and emissions profiles, workplace health and safety, community impact, governance practices and stakeholder relations, employee relations, board structure, transparency and management incentives. The identification of a risk related to an ESG factor will not necessarily exclude a particular security and/or sector that, in the Investment Adviser's view, is otherwise suitable for investment. The relevance of specific traditional fundamental factors and ESG factors to the fundamental investment process varies across asset classes, sectors and strategies. The Investment Adviser may utilise data sources provided by third party vendors and/or engage directly with companies when assessing the above factors. The Investment Adviser employs a dynamic fundamental investment process that considers a wide range of factors, and no one factor or consideration is determinative.

Additionally, this Portfolio leverages the Goldman Sachs Asset Management Global Stewardship Team's engagement initiatives. The Goldman Sachs Asset Management Global Stewardship Team focuses on proactive, outcomes-based engagement, in an attempt to promote best practices. Engagement initiatives are continually reviewed, enhanced and monitored to ensure they incorporate current issues and evolving views about key environmental, social, and governance topics. To guide engagement efforts, the Goldman Sachs Asset Management Global Stewardship Team creates an annual Focus List, which reflects the Goldman Sachs Asset Management Global Stewardship Team's thematic priorities and guides voting and engagement efforts.

### ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

- The Portfolio implements the exclusionary screens as set forth in the ESG Criteria, further described above.

### ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The ESG Criteria is not designed to reduce investments considered prior to the application of this strategy by a committed minimum amount. The exclusionary screens are intended to ensure that issuers engaged in certain activities are entirely excluded from the Portfolio and is expected to remove between 0-5% of the Reference Portfolio/Benchmark.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

***What is the policy to assess good governance practices of the investee companies?***

The Portfolio leverages Goldman Sachs Asset Management's proprietary approach to identifying and evaluating global norms violators and issuers that may be engaged in poor governance practices, in particular with respect to sound management structures, employee relations, remuneration of staff and tax compliance.

This proprietary approach seeks to identify, review, evaluate and monitor companies that are flagged by external data providers as being in violation of, or otherwise not aligned with, the United Nation Global Compact (UNGC) principles, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights as well as companies that have received high controversy scores (including significant governance controversies, severe labour rights controversies and severe tax compliance controversies). Following review of these external data inputs, companies that the Investment Adviser believes to have an ongoing and serious violation and/or are considered to not be following good governance practices with insufficient remediation will be excluded from the Portfolio. This list of companies will be reviewed on at least a semi-annual basis. The Investment Adviser may not be able to readily sell securities that are intended for exclusion from the Portfolio based on this review (for example, due to liquidity issues or for other reasons outside of the Investment Manager's control), however, will seek to divest as soon as possible in an orderly manner and in the best interests of Shareholders.

## What is the asset allocation planned for this financial product?

**Asset allocation** describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

At least 90% of investments will be aligned to the environmental and/or social characteristics promoted by this Portfolio, as noted above. Up to 10% may be held in cash and cash equivalents and derivatives (including but not limited to index futures).

**How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

This question is not applicable

### To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Portfolio does not currently commit to invest in any “sustainable investments” within the meaning of the EU Taxonomy and therefore its alignment with the Taxonomy is 0%. However, the position will be kept under review as the underlying rules are finalised and the availability of reliable data increases over time.

### Does the financial product invest in fossil gas and/or Nuclear energy related activities that comply with the EU Taxonomy<sup>1</sup>?

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

\* For the purpose of these graphs, ‘sovereign bonds’ consist of all sovereign exposures

### What is the minimum share of investments in transitional and enabling activities?

As the Portfolio does not commit to invest any “sustainable investment” within the meaning of the EU Taxonomy, the minimum share of investments in transitional and enabling activities within the meaning of the EU Taxonomy is therefore also set at 0%.

<sup>1</sup>Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Portfolio promotes environmental and social characteristics but does not commit to making any sustainable investments. As a consequence, the Portfolio does not commit to a minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

**What is the minimum share of socially sustainable investments?**

This question is not applicable as the Portfolio does not commit to make socially sustainable investments.

**What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?**

Investments included under "#2 Other" include cash and cash equivalents for liquidity purposes and derivatives (including but not limited to index futures) for efficient portfolio management. These may be used to achieve the investment objective of the Portfolio but neither promote the environmental or social characteristics of the Portfolio, nor qualify as sustainable investments. The percentage shown is expected to be the maximum which may be held in these instruments but the actual percentage may vary from time to time.

These financial instruments are not subject to any minimum environmental or social safeguards.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

Not applicable

**Where can I find more product specific information online?**

More product-specific information can be found on the website:

## Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name:  
Goldman Sachs Global Real Estate Equity Portfolio

Legal entity identifier:  
222100X932LRT37OP014

### Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

| Does this financial product have a sustainable investment objective?                                                                                                                                                                                                                                                                                                              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

## What environmental and/or social characteristics are promoted by this financial product?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The Investment Adviser implements an approach to Environmental, Social and Governance (ESG) considerations into its fundamental investment process which consists of exclusionary screens as set forth below (the "ESG Criteria").

As part of the ESG investment process, the Investment Adviser will avoid investing in companies that are, in the opinion of the Investment Adviser, directly engaged in, and/or deriving significant revenues from the following activities, which, as at the date of the Prospectus, include but are not limited to:

- controversial weapons (including nuclear weapons);
- extraction and/or production of certain fossil fuels (including thermal coal, oil sands, arctic oil and gas);
- tobacco;
- adult entertainment;
- for-profit prisons;
- civilian firearms

Information on the criteria applied when assessing the aforementioned revenues may be found at the following [link](#).

The Portfolio will also seek to exclude from its investment universe companies the Investment Adviser believes to be violating the United Nations Global Compact's ten principles (which are widely recognised corporate sustainability principles that meet fundamental responsibilities in the areas of human rights, labour, environment and anti-corruption). Please refer to the summary of the policy to assess good governance practices below for further detail.

Adherence to these ESG Criteria will be based on thresholds pre-determined by the Investment Adviser in its sole discretion and will be applied to proprietary data and/or data provided by one or more third party vendor(s). The Investment Adviser will rely on third-party data that it believes to be reliable, but it does not guarantee the accuracy of such third-party data. The Investment Adviser, in its sole discretion, retains the right to disapply data provided by third party vendors where it deems the data to be inaccurate or inappropriate. In some cases, data on specific companies may not be available or may be estimated by the Investment Adviser using internal processes or reasonable estimates. Potential omissions from the ESG Criteria may include but are not limited to newly listed companies to which a third party vendor may not yet have data mapped. In the course of gathering data, vendors may make certain value judgements. The Investment Adviser does not verify those judgements, nor quantify their impact upon its analysis. The Investment Adviser in its sole discretion may periodically update its screening process, amend the type of activities that are excluded for investment or revise the thresholds applicable to any such activities.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Portfolio.

***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

The following indicators are used to measure the attainment of the environmental and/or social characteristics promoted by the Portfolio:

- % of companies in the Portfolio deriving significant revenues from:
  - controversial weapons (including nuclear weapons);
  - extraction and/or production of certain fossil fuels (including thermal coal, oil sands, arctic oil and gas);
  - tobacco;
  - adult entertainment;
  - for-profit prisons;
  - civilian firearms

- % of companies in the Portfolio the Investment Adviser believes to be violating the United Nations Global Compact ten principles.

***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

This question is not applicable as the Portfolio does not commit to making sustainable investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

This question is not applicable as the Portfolio does not commit to making sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

***- How have the indicators for adverse impacts on sustainability factors been taken into account?***

Not applicable.

***- How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Not applicable.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

Yes, this Portfolio considers principal adverse impacts on sustainability factors (PAIs) across the environmental and/or social pillars. PAIs are taken into account qualitatively through the application of the binding ESG Criteria outlined above. On a non-binding and materiality basis, PAIs are also considered through firm-wide and investment team specific engagement. Additional information on which PAIs are taken into account are available on our website and will also be available in the Portfolio's annual report pursuant to SFDR Article 11.

☐ No

## What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investments objectives and risk tolerance.

The Investment Adviser implements the ESG Criteria on a binding basis into its investment process, as described above.

In addition to applying the ESG Criteria as set forth above, the Investment Adviser may integrate ESG factors with traditional fundamental factors as part of its fundamental research process to seek to assess overall business quality and valuation, as well as potential risks. Traditional fundamental factors that the Investment Adviser may consider include, but are not limited to, cash flows, balance sheet leverage, return on invested capital, industry dynamics, earnings quality and profitability. ESG factors that the Investment Adviser may consider include, but are not limited to, carbon intensity and emissions profiles, workplace health and safety, community impact, governance practices and stakeholder relations, employee relations, board structure, transparency and management incentives. The identification of a risk related to an ESG factor will not necessarily exclude a particular security and/or sector that, in the Investment Adviser's view, is otherwise suitable for investment. The relevance of specific traditional fundamental factors and ESG factors to the fundamental investment process varies across asset classes, sectors and strategies. The Investment Adviser may utilise data sources provided by third party vendors and/or engage directly with companies when assessing the above factors. The Investment Adviser employs a dynamic fundamental investment process that considers a wide range of factors, and no one factor or consideration is determinative.

Additionally, this Portfolio leverages the Goldman Sachs Asset Management Global Stewardship Team's engagement initiatives. The Goldman Sachs Asset Management Global Stewardship Team focuses on proactive, outcomes-based engagement, in an attempt to promote best practices. Engagement initiatives are continually reviewed, enhanced and monitored to ensure they incorporate current issues and evolving views about key environmental, social, and governance topics. To guide engagement efforts, the Goldman Sachs Asset Management Global Stewardship Team creates an annual Focus List, which reflects the Goldman Sachs Asset Management Global Stewardship Team's thematic priorities and guides voting and engagement efforts.

## *What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?*

- The Portfolio implements the exclusionary screens as set forth in the ESG Criteria, further described above.

## *What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?*

The ESG Criteria is not designed to reduce investments considered prior to the application of this strategy by a committed minimum amount. The exclusionary screens are intended to ensure that issuers engaged in certain activities are entirely excluded from the Portfolio and is expected to remove between 0-5% of the Reference Portfolio/Benchmark.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

***What is the policy to assess good governance practices of the investee companies?***

The Portfolio leverages Goldman Sachs Asset Management's proprietary approach to identifying and evaluating global norms violators and issuers that may be engaged in poor governance practices, in particular with respect to sound management structures, employee relations, remuneration of staff and tax compliance.

This proprietary approach seeks to identify, review, evaluate and monitor companies that are flagged by external data providers as being in violation of, or otherwise not aligned with, the United Nation Global Compact (UNGC) principles, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights as well as companies that have received high controversy scores (including significant governance controversies, severe labour rights controversies and severe tax compliance controversies). Following review of these external data inputs, companies that the Investment Adviser believes to have an ongoing and serious violation and/or are considered to not be following good governance practices with insufficient remediation will be excluded from the Portfolio. This list of companies will be reviewed on at least a semi-annual basis. The Investment Adviser may not be able to readily sell securities that are intended for exclusion from the Portfolio based on this review (for example, due to liquidity issues or for other reasons outside of the Investment Manager's control), however, will seek to divest as soon as possible in an orderly manner and in the best interests of Shareholders.

## What is the asset allocation planned for this financial product?

**Asset allocation** describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

At least 90% of investments will be aligned to the environmental and/or social characteristics promoted by this Portfolio, as noted above. Up to 10% may be held in cash and cash equivalents and derivatives (including but not limited to index futures).

## To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Portfolio does not currently commit to invest in any “sustainable investments” within the meaning of the EU Taxonomy and therefore its alignment with the Taxonomy is 0%. However, the position will be kept under review as the underlying rules are finalised and the availability of reliable data increases over time.

### Does the financial product invest in fossil gas and/or Nuclear energy related activities that comply with the EU Taxonomy?

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

### What is the minimum share of investments in transitional and enabling activities?

As the Portfolio does not commit to invest any “sustainable investment” within the meaning of the EU Taxonomy, the minimum share of investments in transitional and enabling activities within the meaning of the EU Taxonomy is therefore also set at 0%.

<sup>1</sup>Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Portfolio promotes environmental and social characteristics but does not commit to making any sustainable investments. As a consequence, the Portfolio does not commit to a minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

**What is the minimum share of socially sustainable investments?**

This question is not applicable as the Portfolio does not commit to make socially sustainable investments.

**What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?**

Investments included under "#2 Other" include cash and cash equivalents for liquidity purposes and derivatives (including but not limited to index futures) for efficient portfolio management. These may be used to achieve the investment objective of the Portfolio but neither promote the environmental or social characteristics of the Portfolio, nor qualify as sustainable investments. The percentage shown is expected to be the maximum which may be held in these instruments but the actual percentage may vary from time to time.

These financial instruments are not subject to any minimum environmental or social safeguards.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

Not applicable

**Where can I find more product specific information online?**

More product-specific information can be found on the website:

## Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name:  
Goldman Sachs Global Future Real Estate and  
Infrastructure Equity Portfolio

Legal entity identifier:  
549300BOTPTKBHIRUG51

### Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

| Does this financial product have a sustainable investment objective?                                                                                                                                                                                                                                                                                                                                                           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

## What environmental and/or social characteristics are promoted by this financial product?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The Investment Adviser implements an approach to Environmental, Social and Governance (ESG) considerations into its fundamental investment process which consists of exclusionary screens as set forth below (the "ESG Criteria").

As part of the ESG investment process, the Investment Adviser will avoid investing in companies that are, in the opinion of the Investment Adviser, directly engaged in, and/or deriving significant revenues from the following activities, which, as at the date of the Prospectus, include but are not limited to:

- controversial weapons (including nuclear weapons);
- extraction and/or production of certain fossil fuels (including thermal coal, oil sands, arctic oil and gas);
- tobacco;
- adult entertainment;
- for-profit prisons;
- civilian firearms

Information on the criteria applied when assessing the aforementioned revenues may be found at the following [link](#).

The Portfolio will also seek to exclude from its investment universe companies the Investment Adviser believes to be violating the United Nations Global Compact's ten principles (which are widely recognised corporate sustainability principles that meet fundamental responsibilities in the areas of human rights, labour, environment and anti-corruption). Please refer to the summary of the policy to assess good governance practices below for further detail.

Adherence to these ESG Criteria will be based on thresholds pre-determined by the Investment Adviser in its sole discretion and will be applied to proprietary data and/or data provided by one or more third party vendor(s). The Investment Adviser will rely on third-party data that it believes to be reliable, but it does not guarantee the accuracy of such third-party data. The Investment Adviser, in its sole discretion, retains the right to disapply data provided by third party vendors where it deems the data to be inaccurate or inappropriate. In some cases, data on specific companies may not be available or may be estimated by the Investment Adviser using internal processes or reasonable estimates. Potential omissions from the ESG Criteria may include but are not limited to newly listed companies to which a third party vendor may not yet have data mapped. In the course of gathering data, vendors may make certain value judgements. The Investment Adviser does not verify those judgements, nor quantify their impact upon its analysis. The Investment Adviser in its sole discretion may periodically update its screening process, amend the type of activities that are excluded for investment or revise the thresholds applicable to any such activities.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Portfolio.

***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

The following indicators are used to measure the attainment of the environmental and/or social characteristics promoted by the Portfolio:

- % of companies in the Portfolio deriving significant revenues from:
  - controversial weapons (including nuclear weapons);
  - extraction and/or production of certain fossil fuels (including thermal coal, oil sands, arctic oil and gas);
  - tobacco;
  - adult entertainment;
  - for-profit prisons;
  - civilian firearms

- % of companies in the Portfolio the Investment Adviser believes to be violating the United Nations Global Compact ten principles.

***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

This question is not applicable as the Portfolio does not commit to making sustainable investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

This question is not applicable as the Portfolio does not commit to making sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

***- How have the indicators for adverse impacts on sustainability factors been taken into account?***

Not applicable.

***- How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Not applicable.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

Yes, this Portfolio considers principal adverse impacts on sustainability factors (PAIs) across the environmental and/or social pillars. PAIs are taken into account qualitatively through the application of the binding ESG Criteria outlined above. On a non-binding and materiality basis, PAIs are also considered through firm-wide and investment team specific engagement. Additional information on which PAIs are taken into account are available on our website and will also be available in the Portfolio's annual report pursuant to SFDR Article 11.

☐ No

### **What investment strategy does this financial product follow?**

The investment strategy guides investment decisions based on factors such as investments objectives and risk tolerance.

The Investment Adviser implements the ESG Criteria on a binding basis into its investment process, as described above.

In addition to applying the ESG Criteria as set forth above, the Investment Adviser may integrate ESG factors with traditional fundamental factors as part of its fundamental research process to seek to assess overall business quality and valuation, as well as potential risks. Traditional fundamental factors that the Investment Adviser may consider include, but are not limited to, cash flows, balance sheet leverage, return on invested capital, industry dynamics, earnings quality and profitability. ESG factors that the Investment Adviser may consider include, but are not limited to, carbon intensity and emissions profiles, workplace health and safety, community impact, governance practices and stakeholder relations, employee relations, board structure, transparency and management incentives. The identification of a risk related to an ESG factor will not necessarily exclude a particular security and/or sector that, in the Investment Adviser's view, is otherwise suitable for investment. The relevance of specific traditional fundamental factors and ESG factors to the fundamental investment process varies across asset classes, sectors and strategies. The Investment Adviser may utilise data sources provided by third party vendors and/or engage directly with companies when assessing the above factors. The Investment Adviser employs a dynamic fundamental investment process that considers a wide range of factors, and no one factor or consideration is determinative.

The Investment Adviser intends to engage with sovereign issuers in this Portfolio that have a low E-score with the objective to encourage sovereigns to improve their overall environmental performance and to encourage enhanced disclosures of climate related metrics. The Investment Adviser may invest in a sovereign issuer prior to or without engaging with such sovereign issuer.

Additionally, this Portfolio leverages the Goldman Sachs Asset Management Global Stewardship Team's engagement initiatives. The Goldman Sachs Asset Management Global Stewardship Team focuses on proactive, outcomes-based engagement, in an attempt to promote best practices. Engagement initiatives are continually reviewed, enhanced and monitored to ensure they incorporate current issues and evolving views about key environmental, social, and governance topics. To guide engagement efforts, the Goldman Sachs Asset Management Global Stewardship Team creates an annual Focus List, which reflects the Goldman Sachs Asset Management Global Stewardship Team's thematic priorities and guides voting and engagement efforts.

### ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

- The Portfolio implements the exclusionary screens as set forth in the ESG Criteria, further described above.

### ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The ESG Criteria is not designed to reduce investments considered prior to the application of this strategy by a committed minimum amount. The exclusionary screens are intended to ensure that issuers engaged in certain activities are entirely excluded from the Portfolio and is expected to remove between 0-5% of the Reference Portfolio/Benchmark.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

***What is the policy to assess good governance practices of the investee companies?***

The Portfolio leverages Goldman Sachs Asset Management's proprietary approach to identifying and evaluating global norms violators and issuers that may be engaged in poor governance practices, in particular with respect to sound management structures, employee relations, remuneration of staff and tax compliance.

This proprietary approach seeks to identify, review, evaluate and monitor companies that are flagged by external data providers as being in violation of, or otherwise not aligned with, the United Nation Global Compact (UNGC) principles, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights as well as companies that have received high controversy scores (including significant governance controversies, severe labour rights controversies and severe tax compliance controversies). Following review of these external data inputs, companies that the Investment Adviser believes to have an ongoing and serious violation and/or are considered to not be following good governance practices with insufficient remediation will be excluded from the Portfolio. This list of companies will be reviewed on at least a semi-annual basis. The Investment Adviser may not be able to readily sell securities that are intended for exclusion from the Portfolio based on this review (for example, due to liquidity issues or for other reasons outside of the Investment Manager's control), however, will seek to divest as soon as possible in an orderly manner and in the best interests of Shareholders.

## What is the asset allocation planned for this financial product?

**Asset allocation** describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

At least 90% of investments will be aligned to the environmental and/or social characteristics promoted by this Portfolio, as noted above. Up to 10% may be held in cash and cash equivalents and derivatives (including but not limited to index futures).

**How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

This question is not applicable

## To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Portfolio does not currently commit to invest in any “sustainable investments” within the meaning of the EU Taxonomy and therefore its alignment with the Taxonomy is 0%. However, the position will be kept under review as the underlying rules are finalised and the availability of reliable data increases over time.

### Does the financial product invest in fossil gas and/or Nuclear energy related activities that comply with the EU Taxonomy?

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

### What is the minimum share of investments in transitional and enabling activities?

As the Portfolio does not commit to invest any “sustainable investment” within the meaning of the EU Taxonomy, the minimum share of investments in transitional and enabling activities within the meaning of the EU Taxonomy is therefore also set at 0%.

<sup>1</sup>Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Portfolio promotes environmental and social characteristics but does not commit to making any sustainable investments. As a consequence, the Portfolio does not commit to a minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

**What is the minimum share of socially sustainable investments?**

This question is not applicable as the Portfolio does not commit to make socially sustainable investments.

**What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?**

Investments included under "#2 Other" include cash and cash equivalents for liquidity purposes and derivatives (including but not limited to index futures) for efficient portfolio management. These may be used to achieve the investment objective of the Portfolio but neither promote the environmental or social characteristics of the Portfolio, nor qualify as sustainable investments. The percentage shown is expected to be the maximum which may be held in these instruments but the actual percentage may vary from time to time.

These financial instruments are not subject to any minimum environmental or social safeguards.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

Not applicable

**Where can I find more product specific information online?**

### Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

| Does this financial product have a sustainable investment objective?                                                                                                                                                                                                                                                                                                                                                           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <input checked="" type="radio"/> <input type="radio"/> Yes                                                                                                                                                                                                                                                                                                                                                                     | <input type="radio"/> <input checked="" type="radio"/> No                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

## What environmental and/or social characteristics are promoted by this financial product?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The Investment Adviser implements an approach to Environmental, Social and Governance (ESG) considerations into its quantitative investment process as set forth below (the "ESG Criteria"). This consists of: (i) the use of climate metrics to address climate transition risk as set forth below; (ii) exclusionary screens.

The Portfolio seeks to promote a transition to a lower carbon economy by managing climate transition risk relative to the Reference Portfolio/Benchmark via proprietary climate metrics. Where exceptional circumstances exist (including, but not limited to, high market volatility, exceptional market conditions, market disruptions) that result in this target not being achieved, the Investment Adviser will seek to adjust the Portfolio to adhere to the target as soon as reasonably practicable and in the best interests of Shareholders. Please note that the Reference Portfolio/Benchmark is not an ESG benchmark and that the Portfolio is not managed in view of achieving the long-term global warming objectives of the Paris Agreement.

As part of the ESG investment process, the Investment Adviser will avoid investing in companies that are, in the opinion of the Investment Adviser, directly engaged in, and/or deriving significant revenues from the following activities:

- production of and/or involvement in controversial weapons;
- extraction and/or production of certain fossil fuels (including thermal coal or oil sands);
- production of and/or involvement in tobacco products

Information on the criteria applied when assessing the aforementioned revenues may be found at the following [link](#).

The Portfolio will also seek to exclude from its investment universe companies the Investment Adviser believes to be violating the United Nations Global Compact's ten principles (which are widely recognised corporate sustainability principles that meet fundamental responsibilities in the areas of human rights, labour, environment and anti-corruption) using the proprietary approach to assess good governance practices described below as well as data provided by third party vendors.

Adherence to these ESG Criteria will be based on thresholds pre-determined by the Investment Adviser in its sole discretion and will be applied to proprietary data and/or data provided by one or more third party vendor(s). The Investment Adviser will rely on third-party data that it believes to be reliable, but it does not guarantee the accuracy of such third-party data. The Investment Adviser, in its sole discretion, retains the right to disapply data provided by third party vendors where it deems the data to be inaccurate or inappropriate. In some cases, data on specific companies may not be available or may be estimated by the Investment Adviser using internal processes or reasonable estimates. Potential omissions from the ESG Criteria may include but are not limited to newly listed companies to which a third party vendor may not yet have data mapped. In the course of gathering data, vendors may make certain value judgements. The Investment Adviser does not verify those judgements, nor quantify their impact upon its analysis. The Investment Adviser in its sole discretion may periodically update its screening process, amend the type of activities that are excluded for investment or revise the thresholds applicable to any such activities.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Portfolio.

***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

The following indicators are used to measure the attainment of the environmental and/or social characteristics promoted by the Portfolio:

- The level of the climate transition risk of the Portfolio and the Reference Portfolio/Benchmark according to the Investment Advisers' proprietary climate metrics.
- % of companies in the Portfolio deriving significant revenues from:
  - production of and/or involvement in controversial weapons;
  - extraction and/or production of certain fossil fuels (including thermal coal or oil sands);
  - production of and/or involvement in tobacco products
- % of companies in the Portfolio the Investment Adviser believes to be violating the United Nations Global Compact ten principles.

***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

This question is not applicable as the Portfolio does not commit to making sustainable investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

This question is not applicable as the Portfolio does not commit to making sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

***- How have the indicators for adverse impacts on sustainability factors been taken into account?***

Not applicable.

***- How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Not applicable.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

Yes, this Portfolio considers principal adverse impacts on sustainability factors (PAIs) across the environmental and/or social pillars. PAIs are taken into account qualitatively through the application of the binding ESG Criteria outlined above. On a non-binding and materiality basis, PAIs are also considered through firm-wide and investment team specific engagement. Additional information on which PAIs are taken into account are available on our website and will also be available in the Portfolio's annual report pursuant to SFDR Article 11.

☐ No

## What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investments objectives and risk tolerance.

The Investment Adviser implements the ESG Criteria on a binding basis into its investment process, as described above.

In addition to applying the ESG Criteria as set forth above, the Investment Adviser may also assess investee companies against certain social, environmental and governance indicators through its bottom-up stock selection and portfolio construction process. These indicators may include, but are not limited to, environmental impact, labour satisfaction, reputational concerns, governance and management incentives. The Investment Adviser, in its sole discretion, may periodically update the indicators used in the investment decision-making process of the Portfolio. The indicators applied by the Investment Adviser are assessed in reliance on one or a number of third party ESG vendors. The Investment Adviser, in its sole discretion, retains the right to disapply data and/or ratings provided by third party vendors where it deems the data and/or ratings to be inaccurate or inappropriate.

Additionally, this Portfolio leverages the Goldman Sachs Asset Management Global Stewardship Team's engagement initiatives. The Goldman Sachs Asset Management Global Stewardship Team focuses on proactive, outcomes-based engagement, in an attempt to promote best practices. Engagement initiatives are continually reviewed, enhanced and monitored to ensure they incorporate current issues and evolving views about key environmental, social, and governance topics. To guide engagement efforts, the Goldman Sachs Asset Management Global Stewardship Team creates an annual Focus List, which reflects the Goldman Sachs Asset Management Global Stewardship Team's thematic priorities and guides voting and engagement efforts.

### *What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?*

- The Portfolio implements the exclusionary screens as set forth in the ESG Criteria, further described above.
- The Portfolio aims to target a lower climate transition risk relative that is lower or equal to the Reference Portfolio/Benchmark using proprietary climate metrics.

### *What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?*

The ESG Criteria is not designed to reduce investments considered prior to the application of this strategy by a committed minimum amount. The exclusionary screens are intended to ensure that issuers engaged in certain activities are entirely excluded from the Portfolio and is expected to remove between 0-5% of the Reference Portfolio/Benchmark.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

***What is the policy to assess good governance practices of the investee companies?***

The Portfolio leverages Goldman Sachs Asset Management's proprietary approach to identifying and evaluating global norms violators and issuers that may be engaged in poor governance practices, in particular with respect to sound management structures, employee relations, remuneration of staff and tax compliance.

This proprietary approach seeks to identify, review, evaluate and monitor companies that are flagged by external data providers as being in violation of, or otherwise not aligned with, the United Nation Global Compact (UNGC) principles, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights as well as companies that have received high controversy scores (including significant governance controversies, severe labour rights controversies and severe tax compliance controversies). Following review of these external data inputs, companies that the Investment Adviser believes to have an ongoing and serious violation and/or are considered to not be following good governance practices with insufficient remediation will be excluded from the Portfolio. This list of companies will be reviewed on at least a semi-annual basis. The Investment Adviser may not be able to readily sell securities that are intended for exclusion from the Portfolio based on this review (for example, due to liquidity issues or for other reasons outside of the Investment Manager's control), however, will seek to divest as soon as possible in an orderly manner and in the best interests of Shareholders.

## What is the asset allocation planned for this financial product?

**Asset allocation** describes the share of investments in specific assets.

Based on historical data, it is expected on average a minimum of 90% of investments will be aligned to the environmental and/or social characteristics promoted by this Portfolio, as noted above. Based on the daily average over the next calendar year, up to 10% may be held in cash and cash equivalents such as equity index futures, FX spot and FX forwards where applicable. In the event there are significant investments in hedged share classes relative to the unhedged share classes, the proportion of investments aligned with the environmental and/or social characteristics may fall below the threshold set out above as the allocation to cash and/or derivatives may increase.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

### ***How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?***

This question is not applicable

## To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Portfolio does not currently commit to invest in any “sustainable investments” within the meaning of the EU Taxonomy and therefore its alignment with the Taxonomy is 0%. However, the position will be kept under review as the underlying rules are finalised and the availability of reliable data increases over time.

### Does the financial product invest in fossil gas and/or Nuclear energy related activities that comply with the EU Taxonomy?

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

\* For the purpose of these graphs, ‘sovereign bonds’ consist of all sovereign exposures

### What is the minimum share of investments in transitional and enabling activities?

As the Portfolio does not commit to invest any “sustainable investment” within the meaning of the EU Taxonomy, the minimum share of investments in transitional and enabling activities within the meaning of the EU Taxonomy is therefore also set at 0%.

<sup>1</sup>Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Portfolio promotes environmental and social characteristics but does not commit to making any sustainable investments. As a consequence, the Portfolio does not commit to a minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

**What is the minimum share of socially sustainable investments?**

This question is not applicable as the Portfolio does not commit to make socially sustainable investments.

**What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?**

Investments included under “#2 Other” include cash and cash equivalents for liquidity purposes and/or equity index futures, FX spot and forwards for hedging purposes. These may be used to achieve the investment objective of the Portfolio but neither promote the environmental or social characteristics of the Portfolio. The percentage shown is expected to be the daily average over the next calendar year which may be held in these instruments based on historical data but the actual percentage may vary from time to time, in particular, if there is a significant increase in investments in hedged share classes relative to the unhedged share classes in the Portfolio.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

Not applicable

### Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

| Does this financial product have a sustainable investment objective?                                                                                                                                                                                                                                                                                                              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

## What environmental and/or social characteristics are promoted by this financial product?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The Investment Adviser implements an approach to Environmental, Social and Governance (ESG) considerations into its quantitative investment process as set forth below (the "ESG Criteria"). This consists of: (i) the use of climate metrics to address climate transition risk as set forth below; (ii) exclusionary screens.

The Portfolio seeks to promote a transition to a lower carbon economy by managing climate transition risk relative to the Reference Portfolio/Benchmark via proprietary climate metrics. Where exceptional circumstances exist (including, but not limited to, high market volatility, exceptional market conditions, market disruptions) that result in this target not being achieved, the Investment Adviser will seek to adjust the Portfolio to adhere to the target as soon as reasonably practicable and in the best interests of Shareholders. Please note that the Reference Portfolio/Benchmark is not an ESG benchmark and that the Portfolio is not managed in view of achieving the long-term global warming objectives of the Paris Agreement.

As part of the ESG investment process, the Investment Adviser will avoid investing in companies that are, in the opinion of the Investment Adviser, directly engaged in, and/or deriving significant revenues from the following activities:

- production of and/or involvement in controversial weapons;
- extraction and/or production of certain fossil fuels (including thermal coal or oil sands);
- production of and/or involvement in tobacco products

Information on the criteria applied when assessing the aforementioned revenues may be found at the following [link](#).

The Portfolio will also seek to exclude from its investment universe companies the Investment Adviser believes to be violating the United Nations Global Compact's ten principles (which are widely recognised corporate sustainability principles that meet fundamental responsibilities in the areas of human rights, labour, environment and anti-corruption) using the proprietary approach to assess good governance practices described below as well as data provided by third party vendors.

Adherence to these ESG Criteria will be based on thresholds pre-determined by the Investment Adviser in its sole discretion and will be applied to proprietary data and/or data provided by one or more third party vendor(s). The Investment Adviser will rely on third-party data that it believes to be reliable, but it does not guarantee the accuracy of such third-party data. The Investment Adviser, in its sole discretion, retains the right to disapply data provided by third party vendors where it deems the data to be inaccurate or inappropriate. In some cases, data on specific companies may not be available or may be estimated by the Investment Adviser using internal processes or reasonable estimates. Potential omissions from the ESG Criteria may include but are not limited to newly listed companies to which a third party vendor may not yet have data mapped. In the course of gathering data, vendors may make certain value judgements. The Investment Adviser does not verify those judgements, nor quantify their impact upon its analysis. The Investment Adviser in its sole discretion may periodically update its screening process, amend the type of activities that are excluded for investment or revise the thresholds applicable to any such activities.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Portfolio.

***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

The following indicators are used to measure the attainment of the environmental and/or social characteristics promoted by the Portfolio:

- The level of the climate transition risk of the Portfolio and the Reference Portfolio/Benchmark according to the Investment Advisers' proprietary climate metrics.
- % of companies in the Portfolio deriving significant revenues from:
  - production of and/or involvement in controversial weapons;
  - extraction and/or production of certain fossil fuels (including thermal coal or oil sands);
  - production of and/or involvement in tobacco products
- % of companies in the Portfolio the Investment Adviser believes to be violating the United Nations Global Compact ten principles.

***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

This question is not applicable as the Portfolio does not commit to making sustainable investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

This question is not applicable as the Portfolio does not commit to making sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

***- How have the indicators for adverse impacts on sustainability factors been taken into account?***

Not applicable.

***- How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Not applicable.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

Yes, this Portfolio considers principal adverse impacts on sustainability factors (PAIs) across the environmental and/or social pillars. PAIs are taken into account qualitatively through the application of the binding ESG Criteria outlined above. On a non-binding and materiality basis, PAIs are also considered through firm-wide and investment team specific engagement. Additional information on which PAIs are taken into account are available on our website and will also be available in the Portfolio's annual report pursuant to SFDR Article 11.

☐ No

## What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investments objectives and risk tolerance.

The Investment Adviser implements the ESG Criteria on a binding basis into its investment process, as described above.

In addition to applying the ESG Criteria as set forth above, the Investment Adviser may also assess investee companies against certain social, environmental and governance indicators through its bottom-up stock selection and portfolio construction process. These indicators may include, but are not limited to, environmental impact, labour satisfaction, reputational concerns, governance and management incentives. The Investment Adviser, in its sole discretion, may periodically update the indicators used in the investment decision-making process of the Portfolio. The indicators applied by the Investment Adviser are assessed in reliance on one or a number of third party ESG vendors. The Investment Adviser, in its sole discretion, retains the right to disapply data and/or ratings provided by third party vendors where it deems the data and/or ratings to be inaccurate or inappropriate.

Additionally, this Portfolio leverages the Goldman Sachs Asset Management Global Stewardship Team's engagement initiatives. The Goldman Sachs Asset Management Global Stewardship Team focuses on proactive, outcomes-based engagement, in an attempt to promote best practices. Engagement initiatives are continually reviewed, enhanced and monitored to ensure they incorporate current issues and evolving views about key environmental, social, and governance topics. To guide engagement efforts, the Goldman Sachs Asset Management Global Stewardship Team creates an annual Focus List, which reflects the Goldman Sachs Asset Management Global Stewardship Team's thematic priorities and guides voting and engagement efforts.

### *What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?*

- The Portfolio implements the exclusionary screens as set forth in the ESG Criteria, further described above.
- The Portfolio aims to target a lower climate transition risk relative that is lower or equal to the Reference Portfolio/Benchmark using proprietary climate metrics.

### *What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?*

The ESG Criteria is not designed to reduce investments considered prior to the application of this strategy by a committed minimum amount. The exclusionary screens are intended to ensure that issuers engaged in certain activities are entirely excluded from the Portfolio and is expected to remove between 0-5% of the Reference Portfolio/Benchmark.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

***What is the policy to assess good governance practices of the investee companies?***

The Portfolio leverages Goldman Sachs Asset Management's proprietary approach to identifying and evaluating global norms violators and issuers that may be engaged in poor governance practices, in particular with respect to sound management structures, employee relations, remuneration of staff and tax compliance.

This proprietary approach seeks to identify, review, evaluate and monitor companies that are flagged by external data providers as being in violation of, or otherwise not aligned with, the United Nation Global Compact (UNGC) principles, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights as well as companies that have received high controversy scores (including significant governance controversies, severe labour rights controversies and severe tax compliance controversies). Following review of these external data inputs, companies that the Investment Adviser believes to have an ongoing and serious violation and/or are considered to not be following good governance practices with insufficient remediation will be excluded from the Portfolio. This list of companies will be reviewed on at least a semi-annual basis. The Investment Adviser may not be able to readily sell securities that are intended for exclusion from the Portfolio based on this review (for example, due to liquidity issues or for other reasons outside of the Investment Manager's control), however, will seek to divest as soon as possible in an orderly manner and in the best interests of Shareholders.

## What is the asset allocation planned for this financial product?

**Asset allocation** describes the share of investments in specific assets.

Based on historical data, it is expected on average a minimum of 90% of investments will be aligned to the environmental and/or social characteristics promoted by this Portfolio, as noted above. Based on the daily average over the next calendar year, up to 10% may be held in cash and cash equivalents such as equity index futures, FX spot and FX forwards where applicable. In the event there are significant investments in hedged share classes relative to the unhedged share classes, the proportion of investments aligned with the environmental and/or social characteristics may fall below the threshold set out above as the allocation to cash and/or derivatives may increase.

**Taxonomy-aligned activities** are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

### ***How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?***

This question is not applicable

## To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Portfolio does not currently commit to invest in any “sustainable investments” within the meaning of the EU Taxonomy and therefore its alignment with the Taxonomy is 0%. However, the position will be kept under review as the underlying rules are finalised and the availability of reliable data increases over time.

### Does the financial product invest in fossil gas and/or Nuclear energy related activities that comply with the EU Taxonomy?

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

\* For the purpose of these graphs, ‘sovereign bonds’ consist of all sovereign exposures

### What is the minimum share of investments in transitional and enabling activities?

As the Portfolio does not commit to invest any “sustainable investment” within the meaning of the EU Taxonomy, the minimum share of investments in transitional and enabling activities within the meaning of the EU Taxonomy is therefore also set at 0%.

<sup>1</sup>Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Portfolio promotes environmental and social characteristics but does not commit to making any sustainable investments. As a consequence, the Portfolio does not commit to a minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

**What is the minimum share of socially sustainable investments?**

This question is not applicable as the Portfolio does not commit to make socially sustainable investments.

**What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?**

Investments included under “#2 Other” include cash and cash equivalents for liquidity purposes and/or equity index futures, FX spot and forwards for hedging purposes. These may be used to achieve the investment objective of the Portfolio but neither promote the environmental or social characteristics of the Portfolio. The percentage shown is expected to be the daily average over the next calendar year which may be held in these instruments based on historical data but the actual percentage may vary from time to time, in particular, if there is a significant increase in investments in hedged share classes relative to the unhedged share classes in the Portfolio.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

Not applicable

**Where can I find more product specific information online?**

### Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

| Does this financial product have a sustainable investment objective?                                                                                                                                                                                                                                                                                                              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

## What environmental and/or social characteristics are promoted by this financial product?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The Investment Adviser implements an approach to Environmental, Social and Governance (ESG) considerations into its quantitative investment process as set forth below (the "ESG Criteria"). This consists of: (i) the use of climate metrics to address climate transition risk as set forth below; (ii) exclusionary screens.

The Portfolio seeks to promote a transition to a lower carbon economy by managing climate transition risk relative to the Reference Portfolio/Benchmark via proprietary climate metrics. Where exceptional circumstances exist (including, but not limited to, high market volatility, exceptional market conditions, market disruptions) that result in this target not being achieved, the Investment Adviser will seek to adjust the Portfolio to adhere to the target as soon as reasonably practicable and in the best interests of Shareholders. Please note that the Reference Portfolio/Benchmark is not an ESG benchmark and that the Portfolio is not managed in view of achieving the long-term global warming objectives of the Paris Agreement.

As part of the ESG investment process, the Investment Adviser will avoid investing in companies that are, in the opinion of the Investment Adviser, directly engaged in, and/or deriving significant revenues from the following activities:

- production of and/or involvement in controversial weapons;
- extraction and/or production of certain fossil fuels (including thermal coal or oil sands);
- production of and/or involvement in tobacco products

Information on the criteria applied when assessing the aforementioned revenues may be found at the following [link](#).

The Portfolio will also seek to exclude from its investment universe companies the Investment Adviser believes to be violating the United Nations Global Compact's ten principles (which are widely recognised corporate sustainability principles that meet fundamental responsibilities in the areas of human rights, labour, environment and anti-corruption) using the proprietary approach to assess good governance practices described below as well as data provided by third party vendors.

Adherence to these ESG Criteria will be based on thresholds pre-determined by the Investment Adviser in its sole discretion and will be applied to proprietary data and/or data provided by one or more third party vendor(s). The Investment Adviser will rely on third-party data that it believes to be reliable, but it does not guarantee the accuracy of such third-party data. The Investment Adviser, in its sole discretion, retains the right to disapply data provided by third party vendors where it deems the data to be inaccurate or inappropriate. In some cases, data on specific companies may not be available or may be estimated by the Investment Adviser using internal processes or reasonable estimates. Potential omissions from the ESG Criteria may include but are not limited to newly listed companies to which a third party vendor may not yet have data mapped. In the course of gathering data, vendors may make certain value judgements. The Investment Adviser does not verify those judgements, nor quantify their impact upon its analysis. The Investment Adviser in its sole discretion may periodically update its screening process, amend the type of activities that are excluded for investment or revise the thresholds applicable to any such activities.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Portfolio.

***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

The following indicators are used to measure the attainment of the environmental and/or social characteristics promoted by the Portfolio:

- The level of the climate transition risk of the Portfolio and the Reference Portfolio/Benchmark according to the Investment Advisers' proprietary climate metrics.
- % of companies in the Portfolio deriving significant revenues from:
  - production of and/or involvement in controversial weapons;
  - extraction and/or production of certain fossil fuels (including thermal coal or oil sands);
  - production of and/or involvement in tobacco products
- % of companies in the Portfolio the Investment Adviser believes to be violating the United Nations Global Compact ten principles.

***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

This question is not applicable as the Portfolio does not commit to making sustainable investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

This question is not applicable as the Portfolio does not commit to making sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

***- How have the indicators for adverse impacts on sustainability factors been taken into account?***

Not applicable.

***- How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Not applicable.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

Yes, this Portfolio considers principal adverse impacts on sustainability factors (PAIs) across the environmental and/or social pillars. PAIs are taken into account qualitatively through the application of the binding ESG Criteria outlined above. On a non-binding and materiality basis, PAIs are also considered through firm-wide and investment team specific engagement. Additional information on which PAIs are taken into account are available on our website and will also be available in the Portfolio's annual report pursuant to SFDR Article 11.

☐ No

## What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investments objectives and risk tolerance.

The Investment Adviser implements the ESG Criteria on a binding basis into its investment process, as described above.

In addition to applying the ESG Criteria as set forth above, the Investment Adviser may also assess investee companies against certain social, environmental and governance indicators through its bottom-up stock selection and portfolio construction process. These indicators may include, but are not limited to, environmental impact, labour satisfaction, reputational concerns, governance and management incentives. The Investment Adviser, in its sole discretion, may periodically update the indicators used in the investment decision-making process of the Portfolio. The indicators applied by the Investment Adviser are assessed in reliance on one or a number of third party ESG vendors. The Investment Adviser, in its sole discretion, retains the right to disapply data and/or ratings provided by third party vendors where it deems the data and/or ratings to be inaccurate or inappropriate.

Additionally, this Portfolio leverages the Goldman Sachs Asset Management Global Stewardship Team's engagement initiatives. The Goldman Sachs Asset Management Global Stewardship Team focuses on proactive, outcomes-based engagement, in an attempt to promote best practices. Engagement initiatives are continually reviewed, enhanced and monitored to ensure they incorporate current issues and evolving views about key environmental, social, and governance topics. To guide engagement efforts, the Goldman Sachs Asset Management Global Stewardship Team creates an annual Focus List, which reflects the Goldman Sachs Asset Management Global Stewardship Team's thematic priorities and guides voting and engagement efforts.

### *What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?*

- The Portfolio implements the exclusionary screens as set forth in the ESG Criteria, further described above.
- The Portfolio aims to target a lower climate transition risk relative that is lower or equal to the Reference Portfolio/Benchmark using proprietary climate metrics.

### *What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?*

The ESG Criteria is not designed to reduce investments considered prior to the application of this strategy by a committed minimum amount. The exclusionary screens are intended to ensure that issuers engaged in certain activities are entirely excluded from the Portfolio and is expected to remove between 0-5% of the Reference Portfolio/Benchmark.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

***What is the policy to assess good governance practices of the investee companies?***

The Portfolio leverages Goldman Sachs Asset Management's proprietary approach to identifying and evaluating global norms violators and issuers that may be engaged in poor governance practices, in particular with respect to sound management structures, employee relations, remuneration of staff and tax compliance.

This proprietary approach seeks to identify, review, evaluate and monitor companies that are flagged by external data providers as being in violation of, or otherwise not aligned with, the United Nation Global Compact (UNGC) principles, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights as well as companies that have received high controversy scores (including significant governance controversies, severe labour rights controversies and severe tax compliance controversies). Following review of these external data inputs, companies that the Investment Adviser believes to have an ongoing and serious violation and/or are considered to not be following good governance practices with insufficient remediation will be excluded from the Portfolio. This list of companies will be reviewed on at least a semi-annual basis. The Investment Adviser may not be able to readily sell securities that are intended for exclusion from the Portfolio based on this review (for example, due to liquidity issues or for other reasons outside of the Investment Manager's control), however, will seek to divest as soon as possible in an orderly manner and in the best interests of Shareholders.

## What is the asset allocation planned for this financial product?

**Asset allocation** describes the share of investments in specific assets.

Based on historical data, it is expected on average a minimum of 90% of investments will be aligned to the environmental and/or social characteristics promoted by this Portfolio, as noted above. Based on the daily average over the next calendar year, up to 10% may be held in cash and cash equivalents such as equity index futures, FX spot and FX forwards where applicable. In the event there are significant investments in hedged share classes relative to the unhedged share classes, the proportion of investments aligned with the environmental and/or social characteristics may fall below the threshold set out above as the allocation to cash and/or derivatives may increase.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

### ***How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?***

This question is not applicable

## To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Portfolio does not currently commit to invest in any “sustainable investments” within the meaning of the EU Taxonomy and therefore its alignment with the Taxonomy is 0%. However, the position will be kept under review as the underlying rules are finalised and the availability of reliable data increases over time.

### Does the financial product invest in fossil gas and/or Nuclear energy related activities that comply with the EU Taxonomy?

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

\* For the purpose of these graphs, ‘sovereign bonds’ consist of all sovereign exposures

### What is the minimum share of investments in transitional and enabling activities?

As the Portfolio does not commit to invest any “sustainable investment” within the meaning of the EU Taxonomy, the minimum share of investments in transitional and enabling activities within the meaning of the EU Taxonomy is therefore also set at 0%.

<sup>1</sup>Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Portfolio promotes environmental and social characteristics but does not commit to making any sustainable investments. As a consequence, the Portfolio does not commit to a minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

**What is the minimum share of socially sustainable investments?**

This question is not applicable as the Portfolio does not commit to make socially sustainable investments.

**What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?**

Investments included under “#2 Other” include cash and cash equivalents for liquidity purposes and/or equity index futures, FX spot and forwards for hedging purposes. These may be used to achieve the investment objective of the Portfolio but neither promote the environmental or social characteristics of the Portfolio. The percentage shown is expected to be the daily average over the next calendar year which may be held in these instruments based on historical data but the actual percentage may vary from time to time, in particular, if there is a significant increase in investments in hedged share classes relative to the unhedged share classes in the Portfolio.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

Not applicable

**Where can I find more product specific information online?**

Product name:  
Goldman Sachs Eurozone CORE® Equity Portfolio

Legal entity identifier:  
549300MUETWVGSNZ6O68

### Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

| Does this financial product have a sustainable investment objective?                                                                                                                                                                                                                                                                                                              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

## What environmental and/or social characteristics are promoted by this financial product?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The Investment Adviser implements an approach to Environmental, Social and Governance (ESG) considerations into its quantitative investment process as set forth below (the "ESG Criteria"). This consists of: (i) the use of climate metrics to address climate transition risk as set forth below; (ii) exclusionary screens.

The Portfolio seeks to promote a transition to a lower carbon economy by managing climate transition risk relative to the Reference Portfolio/Benchmark via proprietary climate metrics. Where exceptional circumstances exist (including, but not limited to, high market volatility, exceptional market conditions, market disruptions) that result in this target not being achieved, the Investment Adviser will seek to adjust the Portfolio to adhere to the target as soon as reasonably practicable and in the best interests of Shareholders. Please note that the Reference Portfolio/Benchmark is not an ESG benchmark and that the Portfolio is not managed in view of achieving the long-term global warming objectives of the Paris Agreement.

As part of the ESG investment process, the Investment Adviser will avoid investing in companies that are, in the opinion of the Investment Adviser, directly engaged in, and/or deriving significant revenues from the following activities:

- production of and/or involvement in controversial weapons;
- extraction and/or production of certain fossil fuels (including thermal coal or oil sands);
- production of and/or involvement in tobacco products

Information on the criteria applied when assessing the aforementioned revenues may be found at the following [link](#).

The Portfolio will also seek to exclude from its investment universe companies the Investment Adviser believes to be violating the United Nations Global Compact's ten principles (which are widely recognised corporate sustainability principles that meet fundamental responsibilities in the areas of human rights, labour, environment and anti-corruption) using the proprietary approach to assess good governance practices described below as well as data provided by third party vendors.

Adherence to these ESG Criteria will be based on thresholds pre-determined by the Investment Adviser in its sole discretion and will be applied to proprietary data and/or data provided by one or more third party vendor(s). The Investment Adviser will rely on third-party data that it believes to be reliable, but it does not guarantee the accuracy of such third-party data. The Investment Adviser, in its sole discretion, retains the right to disapply data provided by third party vendors where it deems the data to be inaccurate or inappropriate. In some cases, data on specific companies may not be available or may be estimated by the Investment Adviser using internal processes or reasonable estimates. Potential omissions from the ESG Criteria may include but are not limited to newly listed companies to which a third party vendor may not yet have data mapped. In the course of gathering data, vendors may make certain value judgements. The Investment Adviser does not verify those judgements, nor quantify their impact upon its analysis. The Investment Adviser in its sole discretion may periodically update its screening process, amend the type of activities that are excluded for investment or revise the thresholds applicable to any such activities.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Portfolio.

***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

The following indicators are used to measure the attainment of the environmental and/or social characteristics promoted by the Portfolio:

- The level of the climate transition risk of the Portfolio and the Reference Portfolio/Benchmark according to the Investment Advisers' proprietary climate metrics.
- % of companies in the Portfolio deriving significant revenues from:
  - production of and/or involvement in controversial weapons;
  - extraction and/or production of certain fossil fuels (including thermal coal or oil sands);
  - production of and/or involvement in tobacco products
- % of companies in the Portfolio the Investment Adviser believes to be violating the United Nations Global Compact ten principles.

***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

This question is not applicable as the Portfolio does not commit to making sustainable investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

This question is not applicable as the Portfolio does not commit to making sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

***- How have the indicators for adverse impacts on sustainability factors been taken into account?***

Not applicable.

***- How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Not applicable.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

Yes, this Portfolio considers principal adverse impacts on sustainability factors (PAIs) across the environmental and/or social pillars. PAIs are taken into account qualitatively through the application of the binding ESG Criteria outlined above. On a non-binding and materiality basis, PAIs are also considered through firm-wide and investment team specific engagement. Additional information on which PAIs are taken into account are available on our website and will also be available in the Portfolio's annual report pursuant to SFDR Article 11.

☐ No

## What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investments objectives and risk tolerance.

The Investment Adviser implements the ESG Criteria on a binding basis into its investment process, as described above.

In addition to applying the ESG Criteria as set forth above, the Investment Adviser may also assess investee companies against certain social, environmental and governance indicators through its bottom-up stock selection and portfolio construction process. These indicators may include, but are not limited to, environmental impact, labour satisfaction, reputational concerns, governance and management incentives. The Investment Adviser, in its sole discretion, may periodically update the indicators used in the investment decision-making process of the Portfolio. The indicators applied by the Investment Adviser are assessed in reliance on one or a number of third party ESG vendors. The Investment Adviser, in its sole discretion, retains the right to disapply data and/or ratings provided by third party vendors where it deems the data and/or ratings to be inaccurate or inappropriate.

Additionally, this Portfolio leverages the Goldman Sachs Asset Management Global Stewardship Team's engagement initiatives. The Goldman Sachs Asset Management Global Stewardship Team focuses on proactive, outcomes-based engagement, in an attempt to promote best practices. Engagement initiatives are continually reviewed, enhanced and monitored to ensure they incorporate current issues and evolving views about key environmental, social, and governance topics. To guide engagement efforts, the Goldman Sachs Asset Management Global Stewardship Team creates an annual Focus List, which reflects the Goldman Sachs Asset Management Global Stewardship Team's thematic priorities and guides voting and engagement efforts.

### ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

- The Portfolio implements the exclusionary screens as set forth in the ESG Criteria, further described above.
- The Portfolio aims to target a lower climate transition risk relative that is lower or equal to the Reference Portfolio/Benchmark using proprietary climate metrics.

### ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The ESG Criteria is not designed to reduce investments considered prior to the application of this strategy by a committed minimum amount. The exclusionary screens are intended to ensure that issuers engaged in certain activities are entirely excluded from the Portfolio and is expected to remove between 0-5% of the Reference Portfolio/Benchmark.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

***What is the policy to assess good governance practices of the investee companies?***

The Portfolio leverages Goldman Sachs Asset Management's proprietary approach to identifying and evaluating global norms violators and issuers that may be engaged in poor governance practices, in particular with respect to sound management structures, employee relations, remuneration of staff and tax compliance.

This proprietary approach seeks to identify, review, evaluate and monitor companies that are flagged by external data providers as being in violation of, or otherwise not aligned with, the United Nation Global Compact (UNGC) principles, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights as well as companies that have received high controversy scores (including significant governance controversies, severe labour rights controversies and severe tax compliance controversies). Following review of these external data inputs, companies that the Investment Adviser believes to have an ongoing and serious violation and/or are considered to not be following good governance practices with insufficient remediation will be excluded from the Portfolio. This list of companies will be reviewed on at least a semi-annual basis. The Investment Adviser may not be able to readily sell securities that are intended for exclusion from the Portfolio based on this review (for example, due to liquidity issues or for other reasons outside of the Investment Manager's control), however, will seek to divest as soon as possible in an orderly manner and in the best interests of Shareholders.

## What is the asset allocation planned for this financial product?

**Asset allocation** describes the share of investments in specific assets.

Based on historical data, it is expected on average a minimum of 90% of investments will be aligned to the environmental and/or social characteristics promoted by this Portfolio, as noted above. Based on the daily average over the next calendar year, up to 10% may be held in cash and cash equivalents such as equity index futures, FX spot and FX forwards where applicable. In the event there are significant investments in hedged share classes relative to the unhedged share classes, the proportion of investments aligned with the environmental and/or social characteristics may fall below the threshold set out above as the allocation to cash and/or derivatives may increase.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

### ***How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?***

This question is not applicable

## To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Portfolio does not currently commit to invest in any “sustainable investments” within the meaning of the EU Taxonomy and therefore its alignment with the Taxonomy is 0%. However, the position will be kept under review as the underlying rules are finalised and the availability of reliable data increases over time.

## Does the financial product invest in fossil gas and/or Nuclear energy related activities that comply with the EU Taxonomy?

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

\* For the purpose of these graphs, ‘sovereign bonds’ consist of all sovereign exposures

## What is the minimum share of investments in transitional and enabling activities?

As the Portfolio does not commit to invest any “sustainable investment” within the meaning of the EU Taxonomy, the minimum share of investments in transitional and enabling activities within the meaning of the EU Taxonomy is therefore also set at 0%.

<sup>1</sup>Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Portfolio promotes environmental and social characteristics but does not commit to making any sustainable investments. As a consequence, the Portfolio does not commit to a minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

**What is the minimum share of socially sustainable investments?**

This question is not applicable as the Portfolio does not commit to make socially sustainable investments.

**What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?**

Investments included under “#2 Other” include cash and cash equivalents for liquidity purposes and/or equity index futures, FX spot and forwards for hedging purposes. These may be used to achieve the investment objective of the Portfolio but neither promote the environmental or social characteristics of the Portfolio. The percentage shown is expected to be the daily average over the next calendar year which may be held in these instruments based on historical data but the actual percentage may vary from time to time, in particular, if there is a significant increase in investments in hedged share classes relative to the unhedged share classes in the Portfolio.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

Not applicable

**Where can I find more product specific information online?**

More product-specific information can be found on the website:

### Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

| Does this financial product have a sustainable investment objective?                                                                                                                                                                                                                                                                                                              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

## What environmental and/or social characteristics are promoted by this financial product?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The Investment Adviser implements an approach to Environmental, Social and Governance (ESG) considerations into its quantitative investment process as set forth below (the "ESG Criteria"). This consists of: (i) the use of climate metrics to address climate transition risk as set forth below; (ii) exclusionary screens.

The Portfolio seeks to promote a transition to a lower carbon economy by managing climate transition risk relative to the Reference Portfolio/Benchmark via proprietary climate metrics. Where exceptional circumstances exist (including, but not limited to, high market volatility, exceptional market conditions, market disruptions) that result in this target not being achieved, the Investment Adviser will seek to adjust the Portfolio to adhere to the target as soon as reasonably practicable and in the best interests of Shareholders. Please note that the Reference Portfolio/Benchmark is not an ESG benchmark and that the Portfolio is not managed in view of achieving the long-term global warming objectives of the Paris Agreement.

As part of the ESG investment process, the Investment Adviser will avoid investing in companies that are, in the opinion of the Investment Adviser, directly engaged in, and/or deriving significant revenues from the following activities:

- production of and/or involvement in controversial weapons;
- extraction and/or production of certain fossil fuels (including thermal coal or oil sands);
- production of and/or involvement in tobacco products

Information on the criteria applied when assessing the aforementioned revenues may be found at the following [link](#).

The Portfolio will also seek to exclude from its investment universe companies the Investment Adviser believes to be violating the United Nations Global Compact's ten principles (which are widely recognised corporate sustainability principles that meet fundamental responsibilities in the areas of human rights, labour, environment and anti-corruption) using the proprietary approach to assess good governance practices described below as well as data provided by third party vendors.

Adherence to these ESG Criteria will be based on thresholds pre-determined by the Investment Adviser in its sole discretion and will be applied to proprietary data and/or data provided by one or more third party vendor(s). The Investment Adviser will rely on third-party data that it believes to be reliable, but it does not guarantee the accuracy of such third-party data. The Investment Adviser, in its sole discretion, retains the right to disapply data provided by third party vendors where it deems the data to be inaccurate or inappropriate. In some cases, data on specific companies may not be available or may be estimated by the Investment Adviser using internal processes or reasonable estimates. Potential omissions from the ESG Criteria may include but are not limited to newly listed companies to which a third party vendor may not yet have data mapped. In the course of gathering data, vendors may make certain value judgements. The Investment Adviser does not verify those judgements, nor quantify their impact upon its analysis. The Investment Adviser in its sole discretion may periodically update its screening process, amend the type of activities that are excluded for investment or revise the thresholds applicable to any such activities.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Portfolio.

***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

The following indicators are used to measure the attainment of the environmental and/or social characteristics promoted by the Portfolio:

- The level of the climate transition risk of the Portfolio and the Reference Portfolio/Benchmark according to the Investment Advisers' proprietary climate metrics.
- % of companies in the Portfolio deriving significant revenues from:
  - production of and/or involvement in controversial weapons;
  - extraction and/or production of certain fossil fuels (including thermal coal or oil sands);
  - production of and/or involvement in tobacco products
- % of companies in the Portfolio the Investment Adviser believes to be violating the United Nations Global Compact ten principles.

***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

This question is not applicable as the Portfolio does not commit to making sustainable investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

This question is not applicable as the Portfolio does not commit to making sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

***- How have the indicators for adverse impacts on sustainability factors been taken into account?***

Not applicable.

***- How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Not applicable.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

Yes, this Portfolio considers principal adverse impacts on sustainability factors (PAIs) across the environmental and/or social pillars. PAIs are taken into account qualitatively through the application of the binding ESG Criteria outlined above. On a non-binding and materiality basis, PAIs are also considered through firm-wide and investment team specific engagement. Additional information on which PAIs are taken into account are available on our website and will also be available in the Portfolio's annual report pursuant to SFDR Article 11.

☐ No

## What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investments objectives and risk tolerance.

The Investment Adviser implements the ESG Criteria on a binding basis into its investment process, as described above.

In addition to applying the ESG Criteria as set forth above, the Investment Adviser may also assess investee companies against certain social, environmental and governance indicators through its bottom-up stock selection and portfolio construction process. These indicators may include, but are not limited to, environmental impact, labour satisfaction, reputational concerns, governance and management incentives. The Investment Adviser, in its sole discretion, may periodically update the indicators used in the investment decision-making process of the Portfolio. The indicators applied by the Investment Adviser are assessed in reliance on one or a number of third party ESG vendors. The Investment Adviser, in its sole discretion, retains the right to disapply data and/or ratings provided by third party vendors where it deems the data and/or ratings to be inaccurate or inappropriate.

Additionally, this Portfolio leverages the Goldman Sachs Asset Management Global Stewardship Team's engagement initiatives. The Goldman Sachs Asset Management Global Stewardship Team focuses on proactive, outcomes-based engagement, in an attempt to promote best practices. Engagement initiatives are continually reviewed, enhanced and monitored to ensure they incorporate current issues and evolving views about key environmental, social, and governance topics. To guide engagement efforts, the Goldman Sachs Asset Management Global Stewardship Team creates an annual Focus List, which reflects the Goldman Sachs Asset Management Global Stewardship Team's thematic priorities and guides voting and engagement efforts.

### *What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?*

- The Portfolio implements the exclusionary screens as set forth in the ESG Criteria, further described above.
- The Portfolio aims to target a lower climate transition risk relative that is lower or equal to the Reference Portfolio/Benchmark using proprietary climate metrics.

### *What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?*

The ESG Criteria is not designed to reduce investments considered prior to the application of this strategy by a committed minimum amount. The exclusionary screens are intended to ensure that issuers engaged in certain activities are entirely excluded from the Portfolio and is expected to remove between 0-5% of the Reference Portfolio/Benchmark.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

***What is the policy to assess good governance practices of the investee companies?***

The Portfolio leverages Goldman Sachs Asset Management's proprietary approach to identifying and evaluating global norms violators and issuers that may be engaged in poor governance practices, in particular with respect to sound management structures, employee relations, remuneration of staff and tax compliance.

This proprietary approach seeks to identify, review, evaluate and monitor companies that are flagged by external data providers as being in violation of, or otherwise not aligned with, the United Nation Global Compact (UNGC) principles, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights as well as companies that have received high controversy scores (including significant governance controversies, severe labour rights controversies and severe tax compliance controversies). Following review of these external data inputs, companies that the Investment Adviser believes to have an ongoing and serious violation and/or are considered to not be following good governance practices with insufficient remediation will be excluded from the Portfolio. This list of companies will be reviewed on at least a semi-annual basis. The Investment Adviser may not be able to readily sell securities that are intended for exclusion from the Portfolio based on this review (for example, due to liquidity issues or for other reasons outside of the Investment Manager's control), however, will seek to divest as soon as possible in an orderly manner and in the best interests of Shareholders.

## What is the asset allocation planned for this financial product?

**Asset allocation** describes the share of investments in specific assets.

Based on historical data, it is expected on average a minimum of 90% of investments will be aligned to the environmental and/or social characteristics promoted by this Portfolio, as noted above. Based on the daily average over the next calendar year, up to 10% may be held in cash and cash equivalents such as equity index futures, FX spot and FX forwards where applicable. In the event there are significant investments in hedged share classes relative to the unhedged share classes, the proportion of investments aligned with the environmental and/or social characteristics may fall below the threshold set out above as the allocation to cash and/or derivatives may increase.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

### ***How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?***

This question is not applicable

## To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Portfolio does not currently commit to invest in any “sustainable investments” within the meaning of the EU Taxonomy and therefore its alignment with the Taxonomy is 0%. However, the position will be kept under review as the underlying rules are finalised and the availability of reliable data increases over time.

## Does the financial product invest in fossil gas and/or Nuclear energy related activities that comply with the EU Taxonomy?

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

\* For the purpose of these graphs, ‘sovereign bonds’ consist of all sovereign exposures

## What is the minimum share of investments in transitional and enabling activities?

As the Portfolio does not commit to invest any “sustainable investment” within the meaning of the EU Taxonomy, the minimum share of investments in transitional and enabling activities within the meaning of the EU Taxonomy is therefore also set at 0%.

<sup>1</sup>Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Portfolio promotes environmental and social characteristics but does not commit to making any sustainable investments. As a consequence, the Portfolio does not commit to a minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

**What is the minimum share of socially sustainable investments?**

This question is not applicable as the Portfolio does not commit to make socially sustainable investments.

**What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?**

Investments included under “#2 Other” include cash and cash equivalents for liquidity purposes and/or equity index futures, FX spot and forwards for hedging purposes. These may be used to achieve the investment objective of the Portfolio but neither promote the environmental or social characteristics of the Portfolio. The percentage shown is expected to be the daily average over the next calendar year which may be held in these instruments based on historical data but the actual percentage may vary from time to time, in particular, if there is a significant increase in investments in hedged share classes relative to the unhedged share classes in the Portfolio.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

Not applicable

**Where can I find more product specific information online?**

More product-specific information can be found on the website:

### Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

| Does this financial product have a sustainable investment objective?                                                                                                                                                                                                                                                                                                              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

## What environmental and/or social characteristics are promoted by this financial product?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The Investment Adviser implements an approach to Environmental, Social and Governance (ESG) considerations into its quantitative investment process as set forth below (the "ESG Criteria"). This consists of: (i) the use of climate metrics to address climate transition risk as set forth below; (ii) exclusionary screens.

The Portfolio seeks to promote a transition to a lower carbon economy by managing climate transition risk relative to the Reference Portfolio/Benchmark via proprietary climate metrics. Where exceptional circumstances exist (including, but not limited to, high market volatility, exceptional market conditions, market disruptions) that result in this target not being achieved, the Investment Adviser will seek to adjust the Portfolio to adhere to the target as soon as reasonably practicable and in the best interests of Shareholders. Please note that the Reference Portfolio/Benchmark is not an ESG benchmark and that the Portfolio is not managed in view of achieving the long-term global warming objectives of the Paris Agreement.

As part of the ESG investment process, the Investment Adviser will avoid investing in companies that are, in the opinion of the Investment Adviser, directly engaged in, and/or deriving significant revenues from the following activities:

- production of and/or involvement in controversial weapons;
- extraction and/or production of certain fossil fuels (including thermal coal or oil sands);
- production of and/or involvement in tobacco products

Information on the criteria applied when assessing the aforementioned revenues may be found at the following [link](#).

The Portfolio will also seek to exclude from its investment universe companies the Investment Adviser believes to be violating the United Nations Global Compact's ten principles (which are widely recognised corporate sustainability principles that meet fundamental responsibilities in the areas of human rights, labour, environment and anti-corruption) using the proprietary approach to assess good governance practices described below as well as data provided by third party vendors.

Adherence to these ESG Criteria will be based on thresholds pre-determined by the Investment Adviser in its sole discretion and will be applied to proprietary data and/or data provided by one or more third party vendor(s). The Investment Adviser will rely on third-party data that it believes to be reliable, but it does not guarantee the accuracy of such third-party data. The Investment Adviser, in its sole discretion, retains the right to disapply data provided by third party vendors where it deems the data to be inaccurate or inappropriate. In some cases, data on specific companies may not be available or may be estimated by the Investment Adviser using internal processes or reasonable estimates. Potential omissions from the ESG Criteria may include but are not limited to newly listed companies to which a third party vendor may not yet have data mapped. In the course of gathering data, vendors may make certain value judgements. The Investment Adviser does not verify those judgements, nor quantify their impact upon its analysis. The Investment Adviser in its sole discretion may periodically update its screening process, amend the type of activities that are excluded for investment or revise the thresholds applicable to any such activities.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Portfolio.

***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

The following indicators are used to measure the attainment of the environmental and/or social characteristics promoted by the Portfolio:

- The level of the climate transition risk of the Portfolio and the Reference Portfolio/Benchmark according to the Investment Advisers' proprietary climate metrics.
- % of companies in the Portfolio deriving significant revenues from:
  - production of and/or involvement in controversial weapons;
  - extraction and/or production of certain fossil fuels (including thermal coal or oil sands);
  - production of and/or involvement in tobacco products
- % of companies in the Portfolio the Investment Adviser believes to be violating the United Nations Global Compact ten principles.

***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

This question is not applicable as the Portfolio does not commit to making sustainable investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

This question is not applicable as the Portfolio does not commit to making sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

***- How have the indicators for adverse impacts on sustainability factors been taken into account?***

Not applicable.

***- How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Not applicable.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

Yes, this Portfolio considers principal adverse impacts on sustainability factors (PAIs) across the environmental and/or social pillars. PAIs are taken into account qualitatively through the application of the binding ESG Criteria outlined above. On a non-binding and materiality basis, PAIs are also considered through firm-wide and investment team specific engagement. Additional information on which PAIs are taken into account are available on our website and will also be available in the Portfolio's annual report pursuant to SFDR Article 11.

☐ No

## What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investments objectives and risk tolerance.

The Investment Adviser implements the ESG Criteria on a binding basis into its investment process, as described above.

In addition to applying the ESG Criteria as set forth above, the Investment Adviser may also assess investee companies against certain social, environmental and governance indicators through its bottom-up stock selection and portfolio construction process. These indicators may include, but are not limited to, environmental impact, labour satisfaction, reputational concerns, governance and management incentives. The Investment Adviser, in its sole discretion, may periodically update the indicators used in the investment decision-making process of the Portfolio. The indicators applied by the Investment Adviser are assessed in reliance on one or a number of third party ESG vendors. The Investment Adviser, in its sole discretion, retains the right to disapply data and/or ratings provided by third party vendors where it deems the data and/or ratings to be inaccurate or inappropriate.

Additionally, this Portfolio leverages the Goldman Sachs Asset Management Global Stewardship Team's engagement initiatives. The Goldman Sachs Asset Management Global Stewardship Team focuses on proactive, outcomes-based engagement, in an attempt to promote best practices. Engagement initiatives are continually reviewed, enhanced and monitored to ensure they incorporate current issues and evolving views about key environmental, social, and governance topics. To guide engagement efforts, the Goldman Sachs Asset Management Global Stewardship Team creates an annual Focus List, which reflects the Goldman Sachs Asset Management Global Stewardship Team's thematic priorities and guides voting and engagement efforts.

### ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

- The Portfolio implements the exclusionary screens as set forth in the ESG Criteria, further described above.
- The Portfolio aims to target a lower climate transition risk relative that is lower or equal to the Reference Portfolio/Benchmark using proprietary climate metrics.

### ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The ESG Criteria is not designed to reduce investments considered prior to the application of this strategy by a committed minimum amount. The exclusionary screens are intended to ensure that issuers engaged in certain activities are entirely excluded from the Portfolio and is expected to remove between 0-5% of the Reference Portfolio/Benchmark.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

***What is the policy to assess good governance practices of the investee companies?***

The Portfolio leverages Goldman Sachs Asset Management's proprietary approach to identifying and evaluating global norms violators and issuers that may be engaged in poor governance practices, in particular with respect to sound management structures, employee relations, remuneration of staff and tax compliance.

This proprietary approach seeks to identify, review, evaluate and monitor companies that are flagged by external data providers as being in violation of, or otherwise not aligned with, the United Nation Global Compact (UNGC) principles, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights as well as companies that have received high controversy scores (including significant governance controversies, severe labour rights controversies and severe tax compliance controversies). Following review of these external data inputs, companies that the Investment Adviser believes to have an ongoing and serious violation and/or are considered to not be following good governance practices with insufficient remediation will be excluded from the Portfolio. This list of companies will be reviewed on at least a semi-annual basis. The Investment Adviser may not be able to readily sell securities that are intended for exclusion from the Portfolio based on this review (for example, due to liquidity issues or for other reasons outside of the Investment Manager's control), however, will seek to divest as soon as possible in an orderly manner and in the best interests of Shareholders.

## What is the asset allocation planned for this financial product?

**Asset allocation** describes the share of investments in specific assets.

Based on historical data, it is expected on average a minimum of 90% of investments will be aligned to the environmental and/or social characteristics promoted by this Portfolio, as noted above. Based on the daily average over the next calendar year, up to 10% may be held in cash and cash equivalents such as equity index futures, FX spot and FX forwards where applicable. In the event there are significant investments in hedged share classes relative to the unhedged share classes, the proportion of investments aligned with the environmental and/or social characteristics may fall below the threshold set out above as the allocation to cash and/or derivatives may increase.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

### ***How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?***

This question is not applicable

## To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Portfolio does not currently commit to invest in any “sustainable investments” within the meaning of the EU Taxonomy and therefore its alignment with the Taxonomy is 0%. However, the position will be kept under review as the underlying rules are finalised and the availability of reliable data increases over time.

### Does the financial product invest in fossil gas and/or Nuclear energy related activities that comply with the EU Taxonomy?

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

\* For the purpose of these graphs, ‘sovereign bonds’ consist of all sovereign exposures

### What is the minimum share of investments in transitional and enabling activities?

As the Portfolio does not commit to invest any “sustainable investment” within the meaning of the EU Taxonomy, the minimum share of investments in transitional and enabling activities within the meaning of the EU Taxonomy is therefore also set at 0%.

<sup>1</sup>Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Portfolio promotes environmental and social characteristics but does not commit to making any sustainable investments. As a consequence, the Portfolio does not commit to a minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

**What is the minimum share of socially sustainable investments?**

This question is not applicable as the Portfolio does not commit to make socially sustainable investments.

**What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?**

Investments included under “#2 Other” include cash and cash equivalents for liquidity purposes and/or equity index futures, FX spot and forwards for hedging purposes. These may be used to achieve the investment objective of the Portfolio but neither promote the environmental or social characteristics of the Portfolio. The percentage shown is expected to be the daily average over the next calendar year which may be held in these instruments based on historical data but the actual percentage may vary from time to time, in particular, if there is a significant increase in investments in hedged share classes relative to the unhedged share classes in the Portfolio.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

Not applicable

### Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

| Does this financial product have a sustainable investment objective?                                                                                                                                                                                                                                                                                                              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

## What environmental and/or social characteristics are promoted by this financial product?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The Investment Adviser implements an approach to Environmental, Social and Governance (ESG) considerations into its quantitative investment process as set forth below (the "ESG Criteria"). This consists of: (i) the use of climate metrics to address climate transition risk as set forth below; (ii) exclusionary screens.

The Portfolio seeks to promote a transition to a lower carbon economy by managing climate transition risk relative to the Reference Portfolio/Benchmark via proprietary climate metrics. Where exceptional circumstances exist (including, but not limited to, high market volatility, exceptional market conditions, market disruptions) that result in this target not being achieved, the Investment Adviser will seek to adjust the Portfolio to adhere to the target as soon as reasonably practicable and in the best interests of Shareholders. Please note that the Reference Portfolio/Benchmark is not an ESG benchmark and that the Portfolio is not managed in view of achieving the long-term global warming objectives of the Paris Agreement.

As part of the ESG investment process, the Investment Adviser will avoid investing in companies that are, in the opinion of the Investment Adviser, directly engaged in, and/or deriving significant revenues from the following activities:

- production of and/or involvement in controversial weapons;
- extraction and/or production of certain fossil fuels (including thermal coal or oil sands);
- production of and/or involvement in tobacco products

Information on the criteria applied when assessing the aforementioned revenues may be found at the following [link](#).

The Portfolio will also seek to exclude from its investment universe companies the Investment Adviser believes to be violating the United Nations Global Compact's ten principles (which are widely recognised corporate sustainability principles that meet fundamental responsibilities in the areas of human rights, labour, environment and anti-corruption) using the proprietary approach to assess good governance practices described below as well as data provided by third party vendors.

Adherence to these ESG Criteria will be based on thresholds pre-determined by the Investment Adviser in its sole discretion and will be applied to proprietary data and/or data provided by one or more third party vendor(s). The Investment Adviser will rely on third-party data that it believes to be reliable, but it does not guarantee the accuracy of such third-party data. The Investment Adviser, in its sole discretion, retains the right to disapply data provided by third party vendors where it deems the data to be inaccurate or inappropriate. In some cases, data on specific companies may not be available or may be estimated by the Investment Adviser using internal processes or reasonable estimates. Potential omissions from the ESG Criteria may include but are not limited to newly listed companies to which a third party vendor may not yet have data mapped. In the course of gathering data, vendors may make certain value judgements. The Investment Adviser does not verify those judgements, nor quantify their impact upon its analysis. The Investment Adviser in its sole discretion may periodically update its screening process, amend the type of activities that are excluded for investment or revise the thresholds applicable to any such activities.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Portfolio.

***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

The following indicators are used to measure the attainment of the environmental and/or social characteristics promoted by the Portfolio:

- The level of the climate transition risk of the Portfolio and the Reference Portfolio/Benchmark according to the Investment Advisers' proprietary climate metrics.
- % of companies in the Portfolio deriving significant revenues from:
  - production of and/or involvement in controversial weapons;
  - extraction and/or production of certain fossil fuels (including thermal coal or oil sands);
  - production of and/or involvement in tobacco products
- % of companies in the Portfolio the Investment Adviser believes to be violating the United Nations Global Compact ten principles.

***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

This question is not applicable as the Portfolio does not commit to making sustainable investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

This question is not applicable as the Portfolio does not commit to making sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

***- How have the indicators for adverse impacts on sustainability factors been taken into account?***

Not applicable.

***- How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Not applicable.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

Yes, this Portfolio considers principal adverse impacts on sustainability factors (PAIs) across the environmental and/or social pillars. PAIs are taken into account qualitatively through the application of the binding ESG Criteria outlined above. On a non-binding and materiality basis, PAIs are also considered through firm-wide and investment team specific engagement. Additional information on which PAIs are taken into account are available on our website and will also be available in the Portfolio's annual report pursuant to SFDR Article 11.

☐ No

## What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investments objectives and risk tolerance.

The Investment Adviser implements the ESG Criteria on a binding basis into its investment process, as described above.

In addition to applying the ESG Criteria as set forth above, the Investment Adviser may also assess investee companies against certain social, environmental and governance indicators through its bottom-up stock selection and portfolio construction process. These indicators may include, but are not limited to, environmental impact, labour satisfaction, reputational concerns, governance and management incentives. The Investment Adviser, in its sole discretion, may periodically update the indicators used in the investment decision-making process of the Portfolio. The indicators applied by the Investment Adviser are assessed in reliance on one or a number of third party ESG vendors. The Investment Adviser, in its sole discretion, retains the right to disapply data and/or ratings provided by third party vendors where it deems the data and/or ratings to be inaccurate or inappropriate.

Additionally, this Portfolio leverages the Goldman Sachs Asset Management Global Stewardship Team's engagement initiatives. The Goldman Sachs Asset Management Global Stewardship Team focuses on proactive, outcomes-based engagement, in an attempt to promote best practices. Engagement initiatives are continually reviewed, enhanced and monitored to ensure they incorporate current issues and evolving views about key environmental, social, and governance topics. To guide engagement efforts, the Goldman Sachs Asset Management Global Stewardship Team creates an annual Focus List, which reflects the Goldman Sachs Asset Management Global Stewardship Team's thematic priorities and guides voting and engagement efforts.

### *What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?*

- The Portfolio implements the exclusionary screens as set forth in the ESG Criteria, further described above.
- The Portfolio aims to target a lower climate transition risk relative that is lower or equal to the Reference Portfolio/Benchmark using proprietary climate metrics.

### *What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?*

The ESG Criteria is not designed to reduce investments considered prior to the application of this strategy by a committed minimum amount. The exclusionary screens are intended to ensure that issuers engaged in certain activities are entirely excluded from the Portfolio and is expected to remove between 0-5% of the Reference Portfolio/Benchmark.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

***What is the policy to assess good governance practices of the investee companies?***

The Portfolio leverages Goldman Sachs Asset Management's proprietary approach to identifying and evaluating global norms violators and issuers that may be engaged in poor governance practices, in particular with respect to sound management structures, employee relations, remuneration of staff and tax compliance.

This proprietary approach seeks to identify, review, evaluate and monitor companies that are flagged by external data providers as being in violation of, or otherwise not aligned with, the United Nation Global Compact (UNGC) principles, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights as well as companies that have received high controversy scores (including significant governance controversies, severe labour rights controversies and severe tax compliance controversies). Following review of these external data inputs, companies that the Investment Adviser believes to have an ongoing and serious violation and/or are considered to not be following good governance practices with insufficient remediation will be excluded from the Portfolio. This list of companies will be reviewed on at least a semi-annual basis. The Investment Adviser may not be able to readily sell securities that are intended for exclusion from the Portfolio based on this review (for example, due to liquidity issues or for other reasons outside of the Investment Manager's control), however, will seek to divest as soon as possible in an orderly manner and in the best interests of Shareholders.

## What is the asset allocation planned for this financial product?

**Asset allocation** describes the share of investments in specific assets.

Based on historical data, it is expected on average a minimum of 90% of investments will be aligned to the environmental and/or social characteristics promoted by this Portfolio, as noted above. Based on the daily average over the next calendar year, up to 10% may be held in cash and cash equivalents such as equity index futures, FX spot and FX forwards where applicable. In the event there are significant investments in hedged share classes relative to the unhedged share classes, the proportion of investments aligned with the environmental and/or social characteristics may fall below the threshold set out above as the allocation to cash and/or derivatives may increase.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

**How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

This question is not applicable

## To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Portfolio does not currently commit to invest in any “sustainable investments” within the meaning of the EU Taxonomy and therefore its alignment with the Taxonomy is 0%. However, the position will be kept under review as the underlying rules are finalised and the availability of reliable data increases over time.

### Does the financial product invest in fossil gas and/or Nuclear energy related activities that comply with the EU Taxonomy?

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

\* For the purpose of these graphs, ‘sovereign bonds’ consist of all sovereign exposures

### What is the minimum share of investments in transitional and enabling activities?

As the Portfolio does not commit to invest any “sustainable investment” within the meaning of the EU Taxonomy, the minimum share of investments in transitional and enabling activities within the meaning of the EU Taxonomy is therefore also set at 0%.

<sup>1</sup>Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Portfolio promotes environmental and social characteristics but does not commit to making any sustainable investments. As a consequence, the Portfolio does not commit to a minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

**What is the minimum share of socially sustainable investments?**

This question is not applicable as the Portfolio does not commit to make socially sustainable investments.

**What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?**

Investments included under "#2 Other" include cash and cash equivalents for liquidity purposes and/or equity index futures, FX spot and forwards for hedging purposes. These may be used to achieve the investment objective of the Portfolio but neither promote the environmental or social characteristics of the Portfolio. The percentage shown is expected to be the daily average over the next calendar year which may be held in these instruments based on historical data but the actual percentage may vary from time to time, in particular, if there is a significant increase in investments in hedged share classes relative to the unhedged share classes in the Portfolio.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

Not applicable

## What environmental and/or social characteristics are promoted by this financial product?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The Investment Adviser implements an approach to Environmental, Social and Governance (ESG) considerations into its quantitative investment process as set forth below (the "ESG Criteria"). This consists of: (i) the use of climate metrics to address climate transition risk as set forth below; (ii) exclusionary screens.

The Portfolio seeks to promote a transition to a lower carbon economy by managing climate transition risk relative to the Reference Portfolio/Benchmark via proprietary climate metrics. Where exceptional circumstances exist (including, but not limited to, high market volatility, exceptional market conditions, market disruptions) that result in this target not being achieved, the Investment Adviser will seek to adjust the Portfolio to adhere to the target as soon as reasonably practicable and in the best interests of Shareholders. Please note that the Reference Portfolio/Benchmark is not an ESG benchmark and that the Portfolio is not managed in view of achieving the long-term global warming objectives of the Paris Agreement.

As part of the ESG investment process, the Investment Adviser will avoid investing in companies that are, in the opinion of the Investment Adviser, directly engaged in, and/or deriving significant revenues from the following activities:

- production of and/or involvement in controversial weapons;
- extraction and/or production of certain fossil fuels (including thermal coal or oil sands);
- production of and/or involvement in tobacco products

Information on the criteria applied when assessing the aforementioned revenues may be found at the following [link](#).

The Portfolio will also seek to exclude from its investment universe companies the Investment Adviser believes to be violating the United Nations Global Compact's ten principles (which are widely recognised corporate sustainability principles that meet fundamental responsibilities in the areas of human rights, labour, environment and anti-corruption) using the proprietary approach to assess good governance practices described below as well as data provided by third party vendors.

Adherence to these ESG Criteria will be based on thresholds pre-determined by the Investment Adviser in its sole discretion and will be applied to proprietary data and/or data provided by one or more third party vendor(s). The Investment Adviser will rely on third-party data that it believes to be reliable, but it does not guarantee the accuracy of such third-party data. The Investment Adviser, in its sole discretion, retains the right to disapply data provided by third party vendors where it deems the data to be inaccurate or inappropriate. In some cases, data on specific companies may not be available or may be estimated by the Investment Adviser using internal processes or reasonable estimates. Potential omissions from the ESG Criteria may include but are not limited to newly listed companies to which a third party vendor may not yet have data mapped. In the course of gathering data, vendors may make certain value judgements. The Investment Adviser does not verify those judgements, nor quantify their impact upon its analysis. The Investment Adviser in its sole discretion may periodically update its screening process, amend the type of activities that are excluded for investment or revise the thresholds applicable to any such activities.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Portfolio.

***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

The following indicators are used to measure the attainment of the environmental and/or social characteristics promoted by the Portfolio:

- The level of the climate transition risk of the Portfolio and the Reference Portfolio/Benchmark according to the Investment Advisers' proprietary climate metrics.
- % of companies in the Portfolio deriving significant revenues from:
  - production of and/or involvement in controversial weapons;
  - extraction and/or production of certain fossil fuels (including thermal coal or oil sands);
  - production of and/or involvement in tobacco products
- % of companies in the Portfolio the Investment Adviser believes to be violating the United Nations Global Compact ten principles.

***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

This question is not applicable as the Portfolio does not commit to making sustainable investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

This question is not applicable as the Portfolio does not commit to making sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

***- How have the indicators for adverse impacts on sustainability factors been taken into account?***

Not applicable.

***- How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Not applicable.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

Yes, this Portfolio considers principal adverse impacts on sustainability factors (PAIs) across the environmental and/or social pillars. PAIs are taken into account qualitatively through the application of the binding ESG Criteria outlined above. On a non-binding and materiality basis, PAIs are also considered through firm-wide and investment team specific engagement. Additional information on which PAIs are taken into account are available on our website and will also be available in the Portfolio's annual report pursuant to SFDR Article 11.

☐ No

## What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investments objectives and risk tolerance.

The Investment Adviser implements the ESG Criteria on a binding basis into its investment process, as described above.

In addition to applying the ESG Criteria as set forth above, the Investment Adviser may also assess investee companies against certain social, environmental and governance indicators through its bottom-up stock selection and portfolio construction process. These indicators may include, but are not limited to, environmental impact, labour satisfaction, reputational concerns, governance and management incentives. The Investment Adviser, in its sole discretion, may periodically update the indicators used in the investment decision-making process of the Portfolio. The indicators applied by the Investment Adviser are assessed in reliance on one or a number of third party ESG vendors. The Investment Adviser, in its sole discretion, retains the right to disapply data and/or ratings provided by third party vendors where it deems the data and/or ratings to be inaccurate or inappropriate.

Additionally, this Portfolio leverages the Goldman Sachs Asset Management Global Stewardship Team's engagement initiatives. The Goldman Sachs Asset Management Global Stewardship Team focuses on proactive, outcomes-based engagement, in an attempt to promote best practices. Engagement initiatives are continually reviewed, enhanced and monitored to ensure they incorporate current issues and evolving views about key environmental, social, and governance topics. To guide engagement efforts, the Goldman Sachs Asset Management Global Stewardship Team creates an annual Focus List, which reflects the Goldman Sachs Asset Management Global Stewardship Team's thematic priorities and guides voting and engagement efforts.

### *What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?*

- The Portfolio implements the exclusionary screens as set forth in the ESG Criteria, further described above.
- The Portfolio aims to target a lower climate transition risk relative that is lower or equal to the Reference Portfolio/Benchmark using proprietary climate metrics.

### *What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?*

The ESG Criteria is not designed to reduce investments considered prior to the application of this strategy by a committed minimum amount. The exclusionary screens are intended to ensure that issuers engaged in certain activities are entirely excluded from the Portfolio and is expected to remove between 0-5% of the Reference Portfolio/Benchmark.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

***What is the policy to assess good governance practices of the investee companies?***

The Portfolio leverages Goldman Sachs Asset Management's proprietary approach to identifying and evaluating global norms violators and issuers that may be engaged in poor governance practices, in particular with respect to sound management structures, employee relations, remuneration of staff and tax compliance.

This proprietary approach seeks to identify, review, evaluate and monitor companies that are flagged by external data providers as being in violation of, or otherwise not aligned with, the United Nation Global Compact (UNGC) principles, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights as well as companies that have received high controversy scores (including significant governance controversies, severe labour rights controversies and severe tax compliance controversies). Following review of these external data inputs, companies that the Investment Adviser believes to have an ongoing and serious violation and/or are considered to not be following good governance practices with insufficient remediation will be excluded from the Portfolio. This list of companies will be reviewed on at least a semi-annual basis. The Investment Adviser may not be able to readily sell securities that are intended for exclusion from the Portfolio based on this review (for example, due to liquidity issues or for other reasons outside of the Investment Manager's control), however, will seek to divest as soon as possible in an orderly manner and in the best interests of Shareholders.

## What is the asset allocation planned for this financial product?

**Asset allocation** describes the share of investments in specific assets.

Based on historical data, it is expected on average a minimum of 90% of investments will be aligned to the environmental and/or social characteristics promoted by this Portfolio, as noted above. Based on the daily average over the next calendar year, up to 10% may be held in cash and cash equivalents such as equity index futures, FX spot and FX forwards where applicable. In the event there are significant investments in hedged share classes relative to the unhedged share classes, the proportion of investments aligned with the environmental and/or social characteristics may fall below the threshold set out above as the allocation to cash and/or derivatives may increase.

**Taxonomy-aligned activities** are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

### ***How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?***

This question is not applicable

## To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Portfolio does not currently commit to invest in any “sustainable investments” within the meaning of the EU Taxonomy and therefore its alignment with the Taxonomy is 0%. However, the position will be kept under review as the underlying rules are finalised and the availability of reliable data increases over time.

### Does the financial product invest in fossil gas and/or Nuclear energy related activities that comply with the EU Taxonomy?

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

\* For the purpose of these graphs, ‘sovereign bonds’ consist of all sovereign exposures

### What is the minimum share of investments in transitional and enabling activities?

As the Portfolio does not commit to invest any “sustainable investment” within the meaning of the EU Taxonomy, the minimum share of investments in transitional and enabling activities within the meaning of the EU Taxonomy is therefore also set at 0%.

<sup>1</sup>Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Portfolio promotes environmental and social characteristics but does not commit to making any sustainable investments. As a consequence, the Portfolio does not commit to a minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

**What is the minimum share of socially sustainable investments?**

This question is not applicable as the Portfolio does not commit to make socially sustainable investments.

**What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?**

Investments included under “#2 Other” include cash and cash equivalents for liquidity purposes and/or equity index futures, FX spot and forwards for hedging purposes. These may be used to achieve the investment objective of the Portfolio but neither promote the environmental or social characteristics of the Portfolio. The percentage shown is expected to be the daily average over the next calendar year which may be held in these instruments based on historical data but the actual percentage may vary from time to time, in particular, if there is a significant increase in investments in hedged share classes relative to the unhedged share classes in the Portfolio.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

Not applicable

**Where can I find more product specific information online?**

## Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name:  
Goldman Sachs Asia High Yield Bond Portfolio

Legal entity identifier:  
549300SUEM9L9HYECB41

### Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

| Does this financial product have a sustainable investment objective?                                                                                                                                                                                                                                                                                                              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

## What environmental and/or social characteristics are promoted by this financial product?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The Investment Adviser implements an approach to Environmental, Social and Governance (ESG) considerations into its fundamental investment process which consists of exclusions based on proprietary ESG ratings as set forth below (the "ESG Criteria").

The screening process for the Portfolio generally excludes corporate issuers that have the lowest category of ESG ratings according to the Investment Adviser's proprietary internal scoring system provided, however, that the Portfolio may have exposure of up to 10% in such corporate issuers. The Portfolio may invest in a corporate issuer prior to such issuer receiving an internal ESG rating. There are instances where an internal ESG rating may not be available, which include but are not limited to, in-kind transfers, corporate actions, new issues, holdings that are soon to reach their maturity date, and/or certain short-term holdings.

The Investment Adviser in its sole discretion may periodically update its screening process, or revise the thresholds applicable to any such activities. There may be instances where existing issuers in the Portfolio that were not in the lowest category of ESG ratings or otherwise excluded pursuant to the ESG Criteria above at the time of purchase are subsequently determined by the Investment Adviser to either fall into the lowest ESG category or otherwise become eligible for exclusion based on the ESG Criteria above. The Investment Adviser will not be required to sell such securities and may not be able to sell such securities, for example, where they are not readily disposable due to liquidity issues or other reasons.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Portfolio.

***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

The following indicators are used to measure the attainment of the environmental and/or social characteristics promoted by the Portfolio:

- % of corporate issuers with an ESG rating according to the Investment Adviser's proprietary internal scoring system of less than or equal to 1.

***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

This question is not applicable as the Portfolio does not commit to making sustainable investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

This question is not applicable as the Portfolio does not commit to making sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

***- How have the indicators for adverse impacts on sustainability factors been taken into account?***

Not applicable.

***- How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Not applicable.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

Yes, this Portfolio considers principal adverse impacts on sustainability factors (PAIs) across the environmental and/or social pillars. PAIs are taken into account qualitatively through the application of the binding ESG Criteria outlined above. On a non-binding and materiality basis, PAIs are also considered through firm-wide and investment team specific engagement. Additional information on which PAIs are taken into account are available on our website and will also be available in the Portfolio's annual report pursuant to SFDR Article 11.

☐ No

## What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investments objectives and risk tolerance.

The Investment Adviser implements the ESG Criteria on a binding basis into its investment process, as described above.

In addition to applying the ESG Criteria as set forth above the Investment Adviser may integrate ESG factors with traditional fundamental factors as part of its fundamental research process to seek to: (i) determine whether a particular fixed income security and/or sector is suitable and attractively priced for investment and (ii) assess their potential impact on the credit quality and spreads of a particular fixed income security. Traditional fundamental factors that the Investment Adviser may consider on a non-binding basis include, but are not limited to, leverage, earnings, enterprise value, industry trends and macroeconomic factors. ESG factors that the Investment Adviser may consider include, but are not limited to, carbon intensity and emissions profiles, workplace health and safety and cyber risk, stakeholder relations, employee relations, management incentives, governance structure and practices, environmental issues, physical climate risk exposure, loan servicer governance and controversies and labour practices. The identification of a risk related to an ESG factor will not necessarily exclude a particular fixed income security and/or sector that, in the Investment Adviser's view, is otherwise suitable and attractively priced for investment. The relevance of specific traditional fundamental factors and ESG factors to the fundamental investment process varies across asset classes, sectors and strategies. The Investment Adviser may utilise data sources provided by third party vendors and/or engage directly with issuers when assessing the above factors. The Investment Adviser employs a dynamic fundamental investment process that considers a wide range of factors, and no one factor or consideration is determinative.

The Investment Adviser intends to engage with corporate issuers in this Portfolio that the Investment Adviser believes to have low ESG credentials, with the objective to encourage issuers to improve their ESG practices relative to peers. The Investment Adviser may invest in a corporate issuer prior to or without engaging with such corporate issuer.

### ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

- The Portfolio excludes corporate issuers that have the lowest category of ESG ratings according to the Investment Adviser's proprietary internal scoring system at the time of purchasing, however, that the Portfolio may have exposure of up to 10% in such corporate issuers.

### ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

Not applicable

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

***What is the policy to assess good governance practices of the investee companies?***

The Portfolio leverages Goldman Sachs Asset Management's proprietary approach to identifying and evaluating global norms violators and issuers that may be engaged in poor governance practices, in particular with respect to sound management structures, employee relations, remuneration of staff and tax compliance.

This proprietary approach seeks to identify, review, evaluate and monitor companies that are flagged by external data providers as being in violation of, or otherwise not aligned with, the United Nation Global Compact (UNGC) principles, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights as well as companies that have received high controversy scores (including significant governance controversies, severe labour rights controversies and severe tax compliance controversies). Following review of these external data inputs, companies that the Investment Adviser believes to have an ongoing and serious violation and/or are considered to not be following good governance practices with insufficient remediation will be excluded from the Portfolio. This list of companies will be reviewed on at least a semi-annual basis. The Investment Adviser may not be able to readily sell securities that are intended for exclusion from the Portfolio based on this review (for example, due to liquidity issues or for other reasons outside of the Investment Manager's control), however, will seek to divest as soon as possible in an orderly manner and in the best interests of Shareholders.

## What is the asset allocation planned for this financial product?

**Asset allocation** describes the share of investments in specific assets.

At least 80% of investments will be aligned to the environmental and/or social characteristics promoted by this Portfolio, as noted above. Up to 20% may be held in cash, mutual funds, ETFs and derivatives and issuers for which data is lacking and issuers which fall into the lowest ESG category or otherwise become eligible for exclusion after purchase but cannot be readily disposed of.

**Taxonomy-aligned activities** are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

**How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

This question is not applicable

## To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Portfolio does not currently commit to invest in any “sustainable investments” within the meaning of the EU Taxonomy and therefore its alignment with the Taxonomy is 0%. However, the position will be kept under review as the underlying rules are finalised and the availability of reliable data increases over time.

## Does the financial product invest in fossil gas and/or Nuclear energy related activities that comply with the EU Taxonomy?

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

## What is the minimum share of investments in transitional and enabling activities?

As the Portfolio does not commit to invest any “sustainable investment” within the meaning of the EU Taxonomy, the minimum share of investments in transitional and enabling activities within the meaning of the EU Taxonomy is therefore also set at 0%.

<sup>1</sup>Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Portfolio promotes environmental and social characteristics but does not commit to making any sustainable investments. As a consequence, the Portfolio does not commit to a minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

**What is the minimum share of socially sustainable investments?**

This question is not applicable as the Portfolio does not commit to make socially sustainable investments.

**What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?**

Investments included under “#2 Other” include cash, mutual funds and ETFs for liquidity purposes, derivatives for efficient portfolio management and issuers for which data is lacking or which fall into the lowest ESG category or otherwise become eligible for exclusion after purchase but cannot be readily disposed of. These may be used to achieve the investment objective of the Portfolio but neither promote the environmental or social characteristics of the Portfolio, nor qualify as sustainable investments. The percentage shown is expected to be the maximum which may be held in these instruments but the actual percentage may vary from time to time.

These financial instruments are not subject to any minimum environmental or social safeguards.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

Not applicable

**Where can I find more product specific information online?**

More product-specific information can be found on the website:

### Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

| Does this financial product have a sustainable investment objective?                                                                                                                                                                                                                                                                                                              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

## What environmental and/or social characteristics are promoted by this financial product?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The Investment Adviser implements an approach to Environmental, Social and Governance (ESG) considerations into its fundamental investment process as set forth below (the "ESG Criteria"). This consists of: (i) exclusionary screens; (ii) exclusions based on proprietary ESG ratings as set forth below.

As part of the ESG investment process, the Investment Adviser will adhere to the ESG Criteria by avoiding investment in debt securities issued by corporate and sovereign issuers that are, in the opinion of the Investment Adviser, directly engaged in, and/or deriving significant revenues from the following activities:

- production of, and/or involvement in controversial weapons (including nuclear weapons);
- extraction and/or production of certain fossil fuels (including thermal coal and oil sands);
- production or sale of tobacco;
- production or sale of civilian firearms

Information on the criteria applied when assessing the aforementioned revenues may be found at the following [link](#).

The Portfolio will also seek to exclude from its investment universe companies the Investment Adviser believes to be violating the United Nations Global Compact's ten principles (which are widely recognised corporate sustainability principles that meet fundamental responsibilities in the areas of human rights, labour, environment and anti-corruption) using the proprietary approach to assess good governance practices described below as well as data provided by third party vendors.

Adherence to these ESG Criteria will be based on thresholds pre-determined by the Investment Adviser in its sole discretion and will be applied to proprietary data and/or data provided by one or more third party vendor(s). The Investment Adviser will rely on third-party data that it believes to be reliable, but it does not guarantee the accuracy of such third-party data. The Investment Adviser, in its sole discretion, retains the right to disapply data provided by third party vendors where it deems the data to be inaccurate or inappropriate. In some cases, data on specific companies may not be available or may be estimated by the Investment Adviser using internal processes or reasonable estimates. Potential omissions from the ESG Criteria may include but are not limited to newly listed companies to which a third party vendor may not yet have data mapped. In the course of gathering data, vendors may make certain value judgements. The Investment Adviser does not verify those judgements, nor quantify their impact upon its analysis. The Investment Adviser in its sole discretion may periodically update its screening process, amend the type of activities that are excluded for investment or revise the thresholds applicable to any such activities.

Additionally, the screening process for the Portfolio generally excludes government and corporate issuers that have the lowest category of ESG ratings according to the Investment Adviser's proprietary internal scoring system. The government and corporate issuers with the lowest ESG ratings according to the Investment Adviser's proprietary internal scoring system generally account for less than 10% of the issuers for which the Investment Adviser has assigned an internal ESG rating. The Portfolio may invest in a government or corporate issuer prior to such issuer receiving an internal ESG rating. There are instances where an internal ESG rating may not be available, which include but are not limited to, in-kind transfers, corporate actions, new issues, holdings that are soon to reach their maturity date, and/or certain short-term holdings.

The Investment Adviser in its sole discretion may periodically update its screening process, or revise the thresholds applicable to any such activities. There may be instances where existing issuers in the Portfolio that were not in the lowest category of ESG ratings or otherwise excluded pursuant to the ESG Criteria above at the time of purchase are subsequently determined by the Investment Adviser to either fall into the lowest ESG category or otherwise become eligible for exclusion based on the ESG Criteria above. The Investment Adviser will not be required to sell such securities and may not be able to sell such securities, for example, where they are not readily disposable due to liquidity issues or other reasons.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Portfolio.

***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

The following indicators are used to measure the attainment of the environmental and/or social characteristics promoted by the Portfolio:

- % of companies in the Portfolio deriving significant revenues from:
  - production of, and/or involvement in controversial weapons (including nuclear weapons);
  - extraction and/or production of certain fossil fuels (including thermal coal and oil sands);
  - production or sale of tobacco;
  - production or sale of civilian firearms
- % of companies in the Portfolio the Investment Adviser believes to be violating the United Nations Global Compact ten principles.
- % of government and corporate issuers in the Portfolio with an ESG rating according to the Investment Adviser's proprietary internal scoring system of >1.

***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

This question is not applicable as the Portfolio does not commit to make sustainable investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

This question is not applicable as the Portfolio does not commit to make sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

***- How have the indicators for adverse impacts on sustainability factors been taken into account?***

Not applicable.

***- How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Not applicable.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

Yes, this Portfolio considers principal adverse impacts on sustainability factors (PAIs) across the environmental and/or social pillars. PAIs are taken into account qualitatively through the application of the binding ESG Criteria outlined above. On a non-binding and materiality basis, PAIs are also considered through firm-wide and investment team specific engagement. Additional information on which PAIs are taken into account are available on our website and will also be available in the Portfolio's annual report pursuant to SFDR Article 11.

☐ No

## What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investments objectives and risk tolerance.

The Investment Adviser implements the ESG Criteria on a binding basis into its investment process, as described above.

In addition to applying the ESG Criteria as set forth above the Investment Adviser may integrate ESG factors with traditional fundamental factors as part of its fundamental research process to seek to: (i) determine whether a particular fixed income security and/or sector is suitable and attractively priced for investment and (ii) assess their potential impact on the credit quality and spreads of a particular fixed income security. Traditional fundamental factors that the Investment Adviser may consider on a non-binding basis include, but are not limited to, leverage, earnings, enterprise value, industry trends and macroeconomic factors. ESG factors that the Investment Adviser may consider include, but are not limited to, carbon intensity and emissions profiles, workplace health and safety and cyber risk, stakeholder relations, employee relations, management incentives, governance structure and practices, environmental issues, physical climate risk exposure, loan servicer governance and controversies and labour practices. The identification of a risk related to an ESG factor will not necessarily exclude a particular fixed income security and/or sector that, in the Investment Adviser's view, is otherwise suitable and attractively priced for investment. The relevance of specific traditional fundamental factors and ESG factors to the fundamental investment process varies across asset classes, sectors and strategies. The Investment Adviser may utilise data sources provided by third party vendors and/or engage directly with issuers when assessing the above factors. The Investment Adviser employs a dynamic fundamental investment process that considers a wide range of factors, and no one factor or consideration is determinative.

The Investment Adviser intends to engage with corporate issuers in this Portfolio that the Investment Adviser believes to have low ESG credentials, with the objective to encourage issuers to improve their ESG practices relative to peers. The Investment Adviser may invest in a corporate issuer prior to or without engaging with such corporate issuer.

### ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

- The Portfolio implements the exclusionary screens as set forth in the ESG Criteria, further described above.
- The Portfolio excludes government and corporate issuers that have the lowest category of ESG ratings according to the Investment Adviser's proprietary internal scoring system at the time of purchasing, however, that the Portfolio may account for less than 10% in such issuers.

### ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The ESG Criteria is not designed to reduce investments considered prior to the application of this strategy by a committed minimum amount. The exclusionary screens are intended to ensure that issuers engaged in certain activities are entirely excluded from the Portfolio and is expected to remove between 0-10% of the Reference Portfolio/Benchmark.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

***What is the policy to assess good governance practices of the investee companies?***

The Portfolio leverages Goldman Sachs Asset Management's proprietary approach to identifying and evaluating global norms violators and issuers that may be engaged in poor governance practices, in particular with respect to sound management structures, employee relations, remuneration of staff and tax compliance.

This proprietary approach seeks to identify, review, evaluate and monitor companies that are flagged by external data providers as being in violation of, or otherwise not aligned with, the United Nation Global Compact (UNGC) principles, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights as well as companies that have received high controversy scores (including significant governance controversies, severe labour rights controversies and severe tax compliance controversies). Following review of these external data inputs, companies that the Investment Adviser believes to have an ongoing and serious violation and/or are considered to not be following good governance practices with insufficient remediation will be excluded from the Portfolio. This list of companies will be reviewed on at least a semi-annual basis. The Investment Adviser may not be able to readily sell securities that are intended for exclusion from the Portfolio based on this review (for example, due to liquidity issues or for other reasons outside of the Investment Manager's control), however, will seek to divest as soon as possible in an orderly manner and in the best interests of Shareholders.

## What is the asset allocation planned for this financial product?

**Asset allocation** describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

At least 75% of investments will be aligned to the environmental and/or social characteristics promoted by this Portfolio, as noted above. Up to 25% may be held in cash, derivatives and issuers for which data is lacking and issuers which fall into the lowest ESG category or breach the ESG Criteria after purchased.

**How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

This question is not applicable

## To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Portfolio does not currently commit to invest in any “sustainable investments” within the meaning of the EU Taxonomy and therefore its alignment with the Taxonomy is 0%. However, the position will be kept under review as the underlying rules are finalised and the availability of reliable data increases over time.

### Does the financial product invest in fossil gas and/or Nuclear energy related activities that comply with the EU Taxonomy?

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

\* For the purpose of these graphs, ‘sovereign bonds’ consist of all sovereign exposures

### What is the minimum share of investments in transitional and enabling activities?

As the Portfolio does not commit to invest any “sustainable investment” within the meaning of the EU Taxonomy, the minimum share of investments in transitional and enabling activities within the meaning of the EU Taxonomy is therefore also set at 0%.

<sup>1</sup>Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Portfolio promotes environmental and social characteristics but does not commit to making any sustainable investments. As a consequence, the Portfolio does not commit to a minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

**What is the minimum share of socially sustainable investments?**

This question is not applicable as the Portfolio does not commit to make socially sustainable investments.

**What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?**

Investments included under “#2 Other” include cash for liquidity purposes, derivatives for efficient portfolio management and issuers for which data is lacking and which fall into the lowest ESG category or breach the ESG Criteria after purchased. These may be used to achieve the investment objective of the Portfolio but neither promote the environmental or social characteristics of the Portfolio, nor qualify as sustainable investments. The percentage shown is expected to be the maximum which may be held in these instruments but the actual percentage may vary from time to time.

These financial instruments are not subject to any minimum environmental or social safeguards.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

An index has not been designated as a reference benchmark to determine whether this financial product is aligned with the environmental or social characteristics that it promotes.

**Where can I find more product specific information online?**

More product-specific information can be found on the website:

### Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

| Does this financial product have a sustainable investment objective?                                                                                                                                                                                                                                                                                                                                                           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <input checked="" type="radio"/> <input type="radio"/> Yes                                                                                                                                                                                                                                                                                                                                                                     | <input type="radio"/> <input checked="" type="radio"/> No                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

## What environmental and/or social characteristics are promoted by this financial product?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The Investment Adviser implements an approach to Environmental, Social and Governance (ESG) considerations into its fundamental investment process which consists of exclusions based on proprietary ESG ratings as set forth below (the "ESG Criteria").

The screening process for the Portfolio generally excludes corporate issuers that have the lowest category of ESG ratings according to the Investment Adviser's proprietary internal scoring system provided, however, that the Portfolio may have exposure of up to 10% in such corporate issuers. The Portfolio may invest in a corporate issuer prior to such issuer receiving an internal ESG rating. There are instances where an internal ESG rating may not be available, which include but are not limited to, in-kind transfers, corporate actions, new issues, holdings that are soon to reach their maturity date, and/or certain short-term holdings.

The Investment Adviser in its sole discretion may periodically update its screening process, or revise the thresholds applicable to any such activities. There may be instances where existing issuers in the Portfolio that were not in the lowest category of ESG ratings or otherwise excluded pursuant to the ESG Criteria above at the time of purchase are subsequently determined by the Investment Adviser to either fall into the lowest ESG category or otherwise become eligible for exclusion based on the ESG Criteria above. The Investment Adviser will not be required to sell such securities and may not be able to sell such securities, for example, where they are not readily disposable due to liquidity issues or other reasons.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Portfolio.

***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

The following indicators are used to measure the attainment of the environmental and/or social characteristics promoted by the Portfolio:

- % of corporate issuers with an ESG rating according to the Investment Adviser's proprietary internal scoring system of less than or equal to 1.

***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

This question is not applicable as the Portfolio does not commit to making sustainable investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

This question is not applicable as the Portfolio does not commit to making sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

***- How have the indicators for adverse impacts on sustainability factors been taken into account?***

Not applicable.

***- How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Not applicable.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

Yes, this Portfolio considers principal adverse impacts on sustainability factors (PAIs) across the environmental and/or social pillars. PAIs are taken into account qualitatively through the application of the binding ESG Criteria outlined above. On a non-binding and materiality basis, PAIs are also considered through firm-wide and investment team specific engagement. Additional information on which PAIs are taken into account are available on our website and will also be available in the Portfolio's annual report pursuant to SFDR Article 11.

☐ No

## What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investments objectives and risk tolerance.

The Investment Adviser implements the ESG Criteria on a binding basis into its investment process, as described above.

In addition to applying the ESG Criteria as set forth above the Investment Adviser may integrate ESG factors with traditional fundamental factors as part of its fundamental research process to seek to: (i) determine whether a particular fixed income security and/or sector is suitable and attractively priced for investment and (ii) assess their potential impact on the credit quality and spreads of a particular fixed income security. Traditional fundamental factors that the Investment Adviser may consider on a non-binding basis include, but are not limited to, leverage, earnings, enterprise value, industry trends and macroeconomic factors. ESG factors that the Investment Adviser may consider include, but are not limited to, carbon intensity and emissions profiles, workplace health and safety and cyber risk, stakeholder relations, employee relations, management incentives, governance structure and practices, environmental issues, physical climate risk exposure, loan servicer governance and controversies and labour practices. The identification of a risk related to an ESG factor will not necessarily exclude a particular fixed income security and/or sector that, in the Investment Adviser's view, is otherwise suitable and attractively priced for investment. The relevance of specific traditional fundamental factors and ESG factors to the fundamental investment process varies across asset classes, sectors and strategies. The Investment Adviser may utilise data sources provided by third party vendors and/or engage directly with issuers when assessing the above factors. The Investment Adviser employs a dynamic fundamental investment process that considers a wide range of factors, and no one factor or consideration is determinative.

The Investment Adviser intends to engage with corporate issuers in this Portfolio that the Investment Adviser believes to have low ESG credentials, with the objective to encourage issuers to improve their ESG practices relative to peers. The Investment Adviser may invest in a corporate issuer prior to or without engaging with such corporate issuer.

### ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

- The Portfolio excludes corporate issuers that have the lowest category of ESG ratings according to the Investment Adviser's proprietary internal scoring system at the time of purchasing, however, that the Portfolio may have exposure of up to 10% in such corporate issuers.

### ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

Not applicable

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

***What is the policy to assess good governance practices of the investee companies?***

The Portfolio leverages Goldman Sachs Asset Management's proprietary approach to identifying and evaluating global norms violators and issuers that may be engaged in poor governance practices, in particular with respect to sound management structures, employee relations, remuneration of staff and tax compliance.

This proprietary approach seeks to identify, review, evaluate and monitor companies that are flagged by external data providers as being in violation of, or otherwise not aligned with, the United Nation Global Compact (UNGC) principles, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights as well as companies that have received high controversy scores (including significant governance controversies, severe labour rights controversies and severe tax compliance controversies). Following review of these external data inputs, companies that the Investment Adviser believes to have an ongoing and serious violation and/or are considered to not be following good governance practices with insufficient remediation will be excluded from the Portfolio. This list of companies will be reviewed on at least a semi-annual basis. The Investment Adviser may not be able to readily sell securities that are intended for exclusion from the Portfolio based on this review (for example, due to liquidity issues or for other reasons outside of the Investment Manager's control), however, will seek to divest as soon as possible in an orderly manner and in the best interests of Shareholders.

## What is the asset allocation planned for this financial product?

**Asset allocation** describes the share of investments in specific assets.

At least 75% of investments will be aligned to the environmental and/or social characteristics promoted by this Portfolio, as noted above. Up to 25% may be held in cash, derivatives, mutual funds and collateralised securities, and issuers for which data is lacking and which fall into the lowest ESG category or otherwise become eligible for exclusion after purchase but cannot be readily disposed of.

**Taxonomy-aligned activities** are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

**How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

This question is not applicable

## To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Portfolio does not currently commit to invest in any “sustainable investments” within the meaning of the EU Taxonomy and therefore its alignment with the Taxonomy is 0%. However, the position will be kept under review as the underlying rules are finalised and the availability of reliable data increases over time.

## Does the financial product invest in fossil gas and/or Nuclear energy related activities that comply with the EU Taxonomy?

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

## What is the minimum share of investments in transitional and enabling activities?

As the Portfolio does not commit to invest any “sustainable investment” within the meaning of the EU Taxonomy, the minimum share of investments in transitional and enabling activities within the meaning of the EU Taxonomy is therefore also set at 0%.

<sup>1</sup>Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Portfolio promotes environmental and social characteristics but does not commit to making any sustainable investments. As a consequence, the Portfolio does not commit to a minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

**What is the minimum share of socially sustainable investments?**

This question is not applicable as the Portfolio does not commit to make socially sustainable investments.

**What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?**

Investments included under “#2 Other” include cash for liquidity purposes, derivatives, mutual funds and collateralised securities for efficient portfolio management, and issuers for which data is lacking or which fall into the lowest ESG category or otherwise become eligible for exclusion after purchase but cannot be readily disposed of. These may be used to achieve the investment objective of the Portfolio but neither promote the environmental or social characteristics of the Portfolio, nor qualify as sustainable investments. The percentage shown is expected to be the maximum which may be held in these instruments but the actual percentage may vary from time to time.

These financial instruments are not subject to any minimum environmental or social safeguards.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

Not applicable

### Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

| Does this financial product have a sustainable investment objective?                                                                                                                                                                                                                                                                                                              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

## What environmental and/or social characteristics are promoted by this financial product?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The Investment Adviser implements an approach to Environmental, Social and Governance (ESG) considerations into its fundamental investment process as set forth below (the "ESG Criteria"). This consists of: (i) exclusions based on proprietary ESG ratings; (ii) portfolio level targets as set forth below.

The screening process for the Portfolio generally excludes corporate issuers that have the lowest category of ESG ratings according to the Investment Adviser's proprietary internal scoring system provided, however, that the Portfolio may have exposure of up to 10% in such corporate issuers. The Portfolio may invest in a corporate issuer prior to such issuer receiving an internal ESG rating. There are instances where an internal ESG rating may not be available, which include but are not limited to, in-kind transfers, corporate actions, new issues, holdings that are soon to reach their maturity date, and/or certain short-term holdings.

The Investment Adviser in its sole discretion may periodically update its screening process, or revise the thresholds applicable to any such activities. There may be instances where existing issuers in the Portfolio that were not in the lowest category of ESG ratings or otherwise excluded pursuant to the ESG Criteria above at the time of purchase are subsequently determined by the Investment Adviser to either fall into the lowest ESG category or otherwise become eligible for exclusion based on the ESG Criteria above. The Investment Adviser will not be required to sell such securities and may not be able to sell such securities, for example, where they are not readily disposable due to liquidity issues or other reasons.

The Portfolio aims to target a higher environmental score (E-score) relative to the Reference Portfolio/Benchmark. The Investment Adviser aims to measure an E-score for each sovereign issuer in the Portfolio and in the Reference Portfolio/Benchmark according to its proprietary ESG scoring system, which amongst other factors may consider Air Quality, Water Scarcity, Climate & Energy, Biodiversity & Habitat. Where exceptional circumstances exist (including, but not limited to, high market volatility, exceptional market conditions, market disruptions) that result in this target not being achieved, the Investment Adviser will seek to adjust the Portfolio to adhere to the target as soon as reasonably practicable and in the best interests of Shareholders. However, there may be instances where an internal E-score may not be available for a particular sovereign issuer, which include but are not limited to in kind transfers, new issues, holdings that are soon to reach their maturity date, and/or certain short-term holdings. If an issuer does not have an E-score it will be excluded when calculating the E-score of the Portfolio or Reference Portfolio/Benchmark, as applicable.

Although the Portfolio aims to target a better environmental score relative to the Reference Portfolio/Benchmark, please note that the relevant reference benchmark is not an ESG benchmark.

The Investment Adviser will monitor these targets on an ongoing basis and seek to adjust the Portfolio on at least a quarterly basis to adhere to the targets.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Portfolio.

***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

The following indicators are used to measure the attainment of the environmental and/or social characteristics promoted by the Portfolio:

- % of corporate issuers with an ESG rating according to the Investment Adviser's proprietary internal scoring system of less than or equal to 1.
- The difference in the E-score of the Portfolio according to the Investment Adviser's proprietary ESG scoring system for each sovereign issuer and the E-score of the Reference Portfolio/Benchmark.

***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

This question is not applicable as the Portfolio does not commit to making sustainable investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

This question is not applicable as the Portfolio does not commit to making sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

***- How have the indicators for adverse impacts on sustainability factors been taken into account?***

Not applicable.

***- How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Not applicable.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

Yes, this Portfolio considers principal adverse impacts on sustainability factors (PAIs) across the environmental and/or social pillars. PAIs are taken into account qualitatively through the application of the binding ESG Criteria outlined above. On a non-binding and materiality basis, PAIs are also considered through firm-wide and investment team specific engagement. Additional information on which PAIs are taken into account are available on our website and will also be available in the Portfolio's annual report pursuant to SFDR Article 11.

☐ No

### What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investments objectives and risk tolerance.

The Investment Adviser implements the ESG Criteria on a binding basis into its investment process, as described above.

In addition to applying the ESG Criteria as set forth above the Investment Adviser may integrate ESG factors with traditional fundamental factors as part of its fundamental research process to seek to: (i) determine whether a particular fixed income security and/or sector is suitable and attractively priced for investment and (ii) assess their potential impact on the credit quality and spreads of a particular fixed income security. Traditional fundamental factors that the Investment Adviser may consider on a non-binding basis include, but are not limited to, leverage, earnings, enterprise value, industry trends and macroeconomic factors. ESG factors that the Investment Adviser may consider include, but are not limited to, carbon intensity and emissions profiles, workplace health and safety and cyber risk, stakeholder relations, employee relations, management incentives, governance structure and practices, environmental issues, physical climate risk exposure, loan servicer governance and controversies and labour practices. The identification of a risk related to an ESG factor will not necessarily exclude a particular fixed income security and/or sector that, in the Investment Adviser's view, is otherwise suitable and attractively priced for investment. The relevance of specific traditional fundamental factors and ESG factors to the fundamental investment process varies across asset classes, sectors and strategies. The Investment Adviser may utilise data sources provided by third party vendors and/or engage directly with issuers when assessing the above factors. The Investment Adviser employs a dynamic fundamental investment process that considers a wide range of factors, and no one factor or consideration is determinative.

The Investment Adviser intends to engage with corporate issuers in this Portfolio that the Investment Adviser believes to have low ESG credentials, with the objective to encourage issuers to improve their ESG practices relative to peers. The Investment Adviser may invest in a corporate issuer prior to or without engaging with such corporate issuer.

The Investment Adviser intends to engage with sovereign issuers in this Portfolio that have a low E-score with the objective to encourage sovereigns to improve their overall environmental performance and to encourage enhanced disclosures of climate related metrics. The Investment Adviser may invest in a sovereign issuer prior to or without engaging with such sovereign issuer.

### ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

- The Portfolio excludes corporate issuers that have the lowest category of ESG ratings according to the Investment Adviser's proprietary internal scoring system at the time of purchasing, however, that the Portfolio may have exposure of up to 10% in such corporate issuers.
- The Portfolio aims to target a higher environmental score (E-score) relative to the Reference Portfolio/Benchmark.

### ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

Not applicable

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

***What is the policy to assess good governance practices of the investee companies?***

The Portfolio leverages Goldman Sachs Asset Management's proprietary approach to identifying and evaluating global norms violators and issuers that may be engaged in poor governance practices, in particular with respect to sound management structures, employee relations, remuneration of staff and tax compliance.

This proprietary approach seeks to identify, review, evaluate and monitor companies that are flagged by external data providers as being in violation of, or otherwise not aligned with, the United Nation Global Compact (UNGC) principles, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights as well as companies that have received high controversy scores (including significant governance controversies, severe labour rights controversies and severe tax compliance controversies). Following review of these external data inputs, companies that the Investment Adviser believes to have an ongoing and serious violation and/or are considered to not be following good governance practices with insufficient remediation will be excluded from the Portfolio. This list of companies will be reviewed on at least a semi-annual basis. The Investment Adviser may not be able to readily sell securities that are intended for exclusion from the Portfolio based on this review (for example, due to liquidity issues or for other reasons outside of the Investment Manager's control), however, will seek to divest as soon as possible in an orderly manner and in the best interests of Shareholders.

## What is the asset allocation planned for this financial product?

**Asset allocation** describes the share of investments in specific assets.

At least 75% of investments will be aligned to the environmental and/or social characteristics promoted by this Portfolio, as noted above. Up to 25% may be held in cash, derivatives, mutual funds and collateralised securities, and issuers for which data is lacking and which fall into the lowest ESG category or otherwise become eligible for exclusion after purchase but cannot be readily disposed of.

**Taxonomy-aligned activities** are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

**How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

This question is not applicable

## To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Portfolio does not currently commit to invest in any “sustainable investments” within the meaning of the EU Taxonomy and therefore its alignment with the Taxonomy is 0%. However, the position will be kept under review as the underlying rules are finalised and the availability of reliable data increases over time.

## Does the financial product invest in fossil gas and/or Nuclear energy related activities that comply with the EU Taxonomy?

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

## What is the minimum share of investments in transitional and enabling activities?

As the Portfolio does not commit to invest any “sustainable investment” within the meaning of the EU Taxonomy, the minimum share of investments in transitional and enabling activities within the meaning of the EU Taxonomy is therefore also set at 0%.

<sup>1</sup>Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Portfolio promotes environmental and social characteristics but does not commit to making any sustainable investments. As a consequence, the Portfolio does not commit to a minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

**What is the minimum share of socially sustainable investments?**

This question is not applicable as the Portfolio does not commit to make socially sustainable investments.

**What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?**

Investments included under “#2 Other” include cash for liquidity purposes, derivatives, mutual funds and collateralised securities for efficient portfolio management, and issuers for which data is lacking or which fall into the lowest ESG category or otherwise become eligible for exclusion after purchase but cannot be readily disposed of. These may be used to achieve the investment objective of the Portfolio but neither promote the environmental or social characteristics of the Portfolio, nor qualify as sustainable investments. The percentage shown is expected to be the maximum which may be held in these instruments but the actual percentage may vary from time to time.

These financial instruments are not subject to any minimum environmental or social safeguards.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

Not applicable

### Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

| Does this financial product have a sustainable investment objective?                                                                                                                                                                                                                                                                                                                                                           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

## What environmental and/or social characteristics are promoted by this financial product?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The Investment Adviser implements an approach to Environmental, Social and Governance (ESG) considerations into its fundamental investment process which consists of portfolio level targets as set forth below (the "ESG Criteria").

The Portfolio aims to target a higher environmental score (E-score) relative to the Reference Portfolio/Benchmark. The Investment Adviser aims to measure an E-score for each sovereign issuer in the Portfolio and in the Reference Portfolio/Benchmark according to its proprietary ESG scoring system, which amongst other factors may consider Air Quality, Water Scarcity, Climate & Energy, Biodiversity & Habitat. Where exceptional circumstances exist (including, but not limited to, high market volatility, exceptional market conditions, market disruptions) that result in this target not being achieved, the Investment Adviser will seek to adjust the Portfolio to adhere to the target as soon as reasonably practicable and in the best interests of Shareholders. However, there may be instances where an internal E-score may not be available for a particular sovereign issuer, which include but are not limited to in kind transfers, new issues, holdings that are soon to reach their maturity date, and/or certain short-term holdings. If an issuer does not have an E-score it will be excluded when calculating the E-score of the Portfolio or Reference Portfolio/Benchmark, as applicable.

Although the Portfolio aims to target a better environmental score relative to the Reference Portfolio/Benchmark, please note that the relevant reference benchmark is not an ESG benchmark.

The Investment Adviser will monitor these targets on an ongoing basis and seek to adjust the Portfolio on at least a quarterly basis to adhere to the targets.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Portfolio.

***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

The following indicators are used to measure the attainment of the environmental and/or social characteristics promoted by the Portfolio:

- The difference in the E-score of the Portfolio according to the Investment Adviser's proprietary ESG scoring system for each sovereign issuer and the E-score of the Reference Portfolio/Benchmark.

***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

This question is not applicable as the Portfolio does not commit to making sustainable investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

This question is not applicable as the Portfolio does not commit to making sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

***- How have the indicators for adverse impacts on sustainability factors been taken into account?***

Not applicable.

***- How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Not applicable.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

Yes, this Portfolio considers principal adverse impacts on sustainability factors (PAIs) across the environmental and/or social pillars. PAIs are taken into account qualitatively through the application of the binding ESG Criteria outlined above. On a non-binding and materiality basis, PAIs are also considered through firm-wide and investment team specific engagement. Additional information on which PAIs are taken into account are available on our website and will also be available in the Portfolio's annual report pursuant to SFDR Article 11.

☐ No

### What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investments objectives and risk tolerance.

The Investment Adviser implements the ESG Criteria on a binding basis into its investment process, as described above.

In addition to applying the ESG Criteria as set forth above the Investment Adviser may integrate ESG factors with traditional fundamental factors as part of its fundamental research process to seek to: (i) determine whether a particular fixed income security and/or sector is suitable and attractively priced for investment and (ii) assess their potential impact on the credit quality and spreads of a particular fixed income security. Traditional fundamental factors that the Investment Adviser may consider on a non-binding basis include, but are not limited to, leverage, earnings, enterprise value, industry trends and macroeconomic factors. ESG factors that the Investment Adviser may consider include, but are not limited to, carbon intensity and emissions profiles, workplace health and safety and cyber risk, stakeholder relations, employee relations, management incentives, governance structure and practices, environmental issues, physical climate risk exposure, loan servicer governance and controversies and labour practices. The identification of a risk related to an ESG factor will not necessarily exclude a particular fixed income security and/or sector that, in the Investment Adviser's view, is otherwise suitable and attractively priced for investment. The relevance of specific traditional fundamental factors and ESG factors to the fundamental investment process varies across asset classes, sectors and strategies. The Investment Adviser may utilise data sources provided by third party vendors and/or engage directly with issuers when assessing the above factors. The Investment Adviser employs a dynamic fundamental investment process that considers a wide range of factors, and no one factor or consideration is determinative.

The Investment Adviser intends to engage with corporate issuers in this Portfolio that the Investment Adviser believes to have low ESG credentials, with the objective to encourage issuers to improve their ESG practices relative to peers. The Investment Adviser may invest in a corporate issuer prior to or without engaging with such corporate issuer.

The Investment Adviser intends to engage with sovereign issuers in this Portfolio that have a low E-score with the objective to encourage sovereigns to improve their overall environmental performance and to encourage enhanced disclosures of climate related metrics. The Investment Adviser may invest in a sovereign issuer prior to or without engaging with such sovereign issuer.

### ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

- The Portfolio aims to target a higher environmental score (E-score) relative to the Reference Portfolio/Benchmark.

### ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

Not applicable

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

***What is the policy to assess good governance practices of the investee companies?***

The Portfolio leverages Goldman Sachs Asset Management's proprietary approach to identifying and evaluating global norms violators and issuers that may be engaged in poor governance practices, in particular with respect to sound management structures, employee relations, remuneration of staff and tax compliance.

This proprietary approach seeks to identify, review, evaluate and monitor companies that are flagged by external data providers as being in violation of, or otherwise not aligned with, the United Nation Global Compact (UNGC) principles, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights as well as companies that have received high controversy scores (including significant governance controversies, severe labour rights controversies and severe tax compliance controversies). Following review of these external data inputs, companies that the Investment Adviser believes to have an ongoing and serious violation and/or are considered to not be following good governance practices with insufficient remediation will be excluded from the Portfolio. This list of companies will be reviewed on at least a semi-annual basis. The Investment Adviser may not be able to readily sell securities that are intended for exclusion from the Portfolio based on this review (for example, due to liquidity issues or for other reasons outside of the Investment Manager's control), however, will seek to divest as soon as possible in an orderly manner and in the best interests of Shareholders.

## What is the asset allocation planned for this financial product?

**Asset allocation** describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

At least 75% of investments will be aligned to the environmental and/or social characteristics promoted by this Portfolio, as noted above. Up to 25% may be held in cash, derivatives, mutual funds, collateralised securities, fixed income securities and issuers for which data is lacking.

**How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

This question is not applicable

## To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Portfolio does not currently commit to invest in any “sustainable investments” within the meaning of the EU Taxonomy and therefore its alignment with the Taxonomy is 0%. However, the position will be kept under review as the underlying rules are finalised and the availability of reliable data increases over time.

### Does the financial product invest in fossil gas and/or Nuclear energy related activities that comply with the EU Taxonomy?

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

\* For the purpose of these graphs, ‘sovereign bonds’ consist of all sovereign exposures

### What is the minimum share of investments in transitional and enabling activities?

As the Portfolio does not commit to invest any “sustainable investment” within the meaning of the EU Taxonomy, the minimum share of investments in transitional and enabling activities within the meaning of the EU Taxonomy is therefore also set at 0%.

<sup>1</sup>Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Portfolio promotes environmental and social characteristics but does not commit to making any sustainable investments. As a consequence, the Portfolio does not commit to a minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

**What is the minimum share of socially sustainable investments?**

This question is not applicable as the Portfolio does not commit to make socially sustainable investments.

**What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?**

Investments included under “#2 Other” include cash for liquidity purposes, derivatives, mutual funds, collateralised securities and fixed income securities issued by companies for efficient portfolio management purposes and issuers for which data is lacking. These may be used to achieve the investment objective of the Portfolio but neither promote the environmental or social characteristics of the Portfolio, nor qualify as sustainable investments. The percentage shown is expected to be the maximum which may be held in these instruments but the actual percentage may vary from time to time.

These financial instruments are not subject to any minimum environmental or social safeguards.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

Not applicable

**Where can I find more product specific information online?**

More product-specific information can be found on the website:

### Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

| Does this financial product have a sustainable investment objective?                                                                                                                                                                                                                                                                                                              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

## What environmental and/or social characteristics are promoted by this financial product?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The Investment Adviser implements an approach to Environmental, Social and Governance (ESG) considerations into its fundamental investment process which consists of portfolio level targets as set forth below (the "ESG Criteria").

The Portfolio aims to target a higher environmental score (E-score) relative to the Reference Portfolio/Benchmark. The Investment Adviser aims to measure an E-score for each sovereign issuer in the Portfolio and in the Reference Portfolio/Benchmark according to its proprietary ESG scoring system, which amongst other factors may consider Air Quality, Water Scarcity, Climate & Energy, Biodiversity & Habitat. Where exceptional circumstances exist (including, but not limited to, high market volatility, exceptional market conditions, market disruptions) that result in this target not being achieved, the Investment Adviser will seek to adjust the Portfolio to adhere to the target as soon as reasonably practicable and in the best interests of Shareholders. However, there may be instances where an internal E-score may not be available for a particular sovereign issuer, which include but are not limited to in kind transfers, new issues, holdings that are soon to reach their maturity date, and/or certain short-term holdings. If an issuer does not have an E-score it will be excluded when calculating the E-score of the Portfolio or Reference Portfolio/Benchmark, as applicable.

Although the Portfolio aims to target a better environmental score relative to the Reference Portfolio/Benchmark, please note that the relevant reference benchmark is not an ESG benchmark.

The Investment Adviser will monitor these targets on an ongoing basis and seek to adjust the Portfolio on at least a quarterly basis to adhere to the targets.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Portfolio.

***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

The following indicators are used to measure the attainment of the environmental and/or social characteristics promoted by the Portfolio:

- The difference in the E-score of the Portfolio according to the Investment Adviser's proprietary ESG scoring system for each sovereign issuer and the E-score of the Reference Portfolio/Benchmark.

***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

This question is not applicable as the Portfolio does not commit to making sustainable investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

This question is not applicable as the Portfolio does not commit to making sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

***- How have the indicators for adverse impacts on sustainability factors been taken into account?***

Not applicable.

***- How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Not applicable.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

Yes, this Portfolio considers principal adverse impacts on sustainability factors (PAIs) across the environmental and/or social pillars. PAIs are taken into account qualitatively through the application of the binding ESG Criteria outlined above. On a non-binding and materiality basis, PAIs are also considered through firm-wide and investment team specific engagement. Additional information on which PAIs are taken into account are available on our website and will also be available in the Portfolio's annual report pursuant to SFDR Article 11.

☐ No

## What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investments objectives and risk tolerance.

The Investment Adviser implements the ESG Criteria on a binding basis into its investment process, as described above.

In addition to applying the ESG Criteria as set forth above the Investment Adviser may integrate ESG factors with traditional fundamental factors as part of its fundamental research process to seek to: (i) determine whether a particular fixed income security and/or sector is suitable and attractively priced for investment and (ii) assess their potential impact on the credit quality and spreads of a particular fixed income security. Traditional fundamental factors that the Investment Adviser may consider on a non-binding basis include, but are not limited to, leverage, earnings, enterprise value, industry trends and macroeconomic factors. ESG factors that the Investment Adviser may consider include, but are not limited to, carbon intensity and emissions profiles, workplace health and safety and cyber risk, stakeholder relations, employee relations, management incentives, governance structure and practices, environmental issues, physical climate risk exposure, loan servicer governance and controversies and labour practices. The identification of a risk related to an ESG factor will not necessarily exclude a particular fixed income security and/or sector that, in the Investment Adviser's view, is otherwise suitable and attractively priced for investment. The relevance of specific traditional fundamental factors and ESG factors to the fundamental investment process varies across asset classes, sectors and strategies. The Investment Adviser may utilise data sources provided by third party vendors and/or engage directly with issuers when assessing the above factors. The Investment Adviser employs a dynamic fundamental investment process that considers a wide range of factors, and no one factor or consideration is determinative.

The Investment Adviser intends to engage with corporate issuers in this Portfolio that the Investment Adviser believes to have low ESG credentials, with the objective to encourage issuers to improve their ESG practices relative to peers. The Investment Adviser may invest in a corporate issuer prior to or without engaging with such corporate issuer.

The Investment Adviser intends to engage with sovereign issuers in this Portfolio that have a low E-score with the objective to encourage sovereigns to improve their overall environmental performance and to encourage enhanced disclosures of climate related metrics. The Investment Adviser may invest in a sovereign issuer prior to or without engaging with such sovereign issuer.

## ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

- The Portfolio aims to target a higher environmental score (E-score) relative to the Reference Portfolio/Benchmark.

## ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

Not applicable

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

***What is the policy to assess good governance practices of the investee companies?***

The Portfolio leverages Goldman Sachs Asset Management's proprietary approach to identifying and evaluating global norms violators and issuers that may be engaged in poor governance practices, in particular with respect to sound management structures, employee relations, remuneration of staff and tax compliance.

This proprietary approach seeks to identify, review, evaluate and monitor companies that are flagged by external data providers as being in violation of, or otherwise not aligned with, the United Nation Global Compact (UNGC) principles, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights as well as companies that have received high controversy scores (including significant governance controversies, severe labour rights controversies and severe tax compliance controversies). Following review of these external data inputs, companies that the Investment Adviser believes to have an ongoing and serious violation and/or are considered to not be following good governance practices with insufficient remediation will be excluded from the Portfolio. This list of companies will be reviewed on at least a semi-annual basis. The Investment Adviser may not be able to readily sell securities that are intended for exclusion from the Portfolio based on this review (for example, due to liquidity issues or for other reasons outside of the Investment Manager's control), however, will seek to divest as soon as possible in an orderly manner and in the best interests of Shareholders.

## What is the asset allocation planned for this financial product?

**Asset allocation** describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

At least 75% of investments will be aligned to the environmental and/or social characteristics promoted by this Portfolio, as noted above. Up to 25% may be held in cash and/or derivatives, mutual funds, collateralised securities, fixed income securities issued by companies and and issuers for which data is lacking

**How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

This question is not applicable

## To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Portfolio does not currently commit to invest in any “sustainable investments” within the meaning of the EU Taxonomy and therefore its alignment with the Taxonomy is 0%. However, the position will be kept under review as the underlying rules are finalised and the availability of reliable data increases over time.

### Does the financial product invest in fossil gas and/or Nuclear energy related activities that comply with the EU Taxonomy?

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

\* For the purpose of these graphs, ‘sovereign bonds’ consist of all sovereign exposures

### What is the minimum share of investments in transitional and enabling activities?

As the Portfolio does not commit to invest any “sustainable investment” within the meaning of the EU Taxonomy, the minimum share of investments in transitional and enabling activities within the meaning of the EU Taxonomy is therefore also set at 0%.

<sup>1</sup>Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Portfolio promotes environmental and social characteristics but does not commit to making any sustainable investments. As a consequence, the Portfolio does not commit to a minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

**What is the minimum share of socially sustainable investments?**

This question is not applicable as the Portfolio does not commit to make socially sustainable investments.

**What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?**

Investments included under “#2 Other” include cash for liquidity purposes, derivatives, mutual funds, collateralised securities and fixed income securities issued by companies for efficient portfolio management purposes and issuers for which data is lacking. These may be used to achieve the investment objective of the Portfolio but neither promote the environmental or social characteristics of the Portfolio, nor qualify as sustainable investments. The percentage shown is expected to be the maximum which may be held in these instruments but the actual percentage may vary from time to time.

These financial instruments are not subject to any minimum environmental or social safeguards.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

Not applicable

**Where can I find more product specific information online?**

More product-specific information can be found on the website:

### Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

| Does this financial product have a sustainable investment objective?                                                                                                                                                                                                                                                                                                              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

## What environmental and/or social characteristics are promoted by this financial product?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The Investment Adviser implements an approach to Environmental, Social and Governance (ESG) considerations into its fundamental investment process as set forth below (the "ESG Criteria"). This consists of: (i) exclusionary screens; (ii) exclusions based on proprietary ESG ratings; (iii) portfolio level targets set forth below.

As part of the ESG investment process, the Investment Adviser will adhere to the ESG Criteria by avoiding investment in debt securities issued by corporate and sovereign issuers that are, in the opinion of the Investment Adviser, directly engaged in, and/or deriving significant revenues from the following activities:

- production of, and/or involvement in controversial weapons (including nuclear weapons);
- extraction and/or production of certain fossil fuels (including thermal coal and oil sands);
- production or sale of tobacco;
- production or sale of civilian firearms

Information on the criteria applied when assessing the aforementioned revenues may be found at the following [link](#).

The Portfolio will also seek to exclude from its investment universe companies the Investment Adviser believes to be violating the United Nations Global Compact's ten principles (which are widely recognised corporate sustainability principles that meet fundamental responsibilities in the areas of human rights, labour, environment and anti-corruption) using the proprietary approach to assess good governance practices described below as well as data provided by third party vendors.

Adherence to these ESG Criteria will be based on thresholds pre-determined by the Investment Adviser in its sole discretion and will be applied to proprietary data and/or data provided by one or more third party vendor(s). The Investment Adviser will rely on third-party data that it believes to be reliable, but it does not guarantee the accuracy of such third-party data. The Investment Adviser, in its sole discretion, retains the right to disapply data provided by third party vendors where it deems the data to be inaccurate or inappropriate. In some cases, data on specific companies may not be available or may be estimated by the Investment Adviser using internal processes or reasonable estimates. Potential omissions from the ESG Criteria may include but are not limited to newly listed companies to which a third party vendor may not yet have data mapped. In the course of gathering data, vendors may make certain value judgements. The Investment Adviser does not verify those judgements, nor quantify their impact upon its analysis. The Investment Adviser in its sole discretion may periodically update its screening process, amend the type of activities that are excluded for investment or revise the thresholds applicable to any such activities.

Additionally, the screening process for the Portfolio generally excludes government and corporate issuers that have the lowest category of ESG ratings according to the Investment Adviser's proprietary internal scoring system. The government and corporate issuers with the lowest ESG ratings according to the Investment Adviser's proprietary internal scoring system generally account for less than 10% of the issuers for which the Investment Adviser has assigned an internal ESG rating. The Portfolio may invest in a government or corporate issuer prior to such issuer receiving an internal ESG rating. There are instances where an internal ESG rating may not be available, which include but are not limited to, in-kind transfers, corporate actions, new issues, holdings that are soon to reach their maturity date, and/or certain short-term holdings.

The Investment Adviser in its sole discretion may periodically update its screening process, or revise the thresholds applicable to any such activities. There may be instances where existing issuers in the Portfolio that were not in the lowest category of ESG ratings or otherwise excluded pursuant to the ESG Criteria above at the time of purchase are subsequently determined by the Investment Adviser to either fall into the lowest ESG category or otherwise become eligible for exclusion based on the ESG Criteria above. The Investment Adviser will not be required to sell such securities and may not be able to sell such securities, for example, where they are not readily disposable due to liquidity issues or other reasons.

The Portfolio aims to target a lower exposure, relative to the 50% JPMorgan EMBI Global Diversified 1-3Yr & 50% JPMorgan CEMBI Broad Diversified 1-3Yr, to companies with certain pre-defined thresholds for diversity on company boards as measured by percentage of women directors on the company's board of directors. The current pre-defined threshold has been set by the Investment Adviser for the Portfolio to hold less than the 50% JPMorgan EMBI Global Diversified 1-3Yr & 50% JPMorgan CEMBI Broad Diversified 1-3Yr weight in issuers that have less than 10% women on board (i.e. boards with fewer than 10% of their members being women fall below the threshold), but may be changed at discretion of the Investment Adviser without prior notice to Shareholders (who may obtain details of the current threshold at any point from the Investment Adviser ).

The Portfolio aims to target a lower weighted average carbon intensity relative to the 50% JPMorgan EMBI Global Diversified 1-3Yr & 50% JPMorgan CEMBI Broad Diversified 1-3Yr. Weighted average carbon intensity is a measure of the Scope 1 and 2 carbon emissions of a corporate issuer weighted by average portfolio weight. This measure is calculated by the Investment Adviser, using third party data. Scope 1 emissions include all direct Greenhouse Gas emissions from sources owned or controlled by the company. Scope 2 emissions include indirect GHG emissions from consumption of purchased electricity, heat, or steam, and the transmission and distribution (T&D) losses associated with some purchased utilities. There may be instances where Scope 1 and Scope 2 carbon emissions data may not be available for a particular corporate issuer.

The Investment Adviser will monitor these targets on an ongoing basis and seek to adjust the Portfolio on at least a quarterly basis to adhere to the targets. Please note that the 50% JPMorgan EMBI Global Diversified 1-3Yr & 50% JPMorgan CEMBI Broad Diversified 1-3Yr is not an ESG benchmark and that the Portfolio is not managed in view of achieving the long-term global warming objectives of the Paris Agreement.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Portfolio.

***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

The following indicators are used to measure the attainment of the environmental and/or social characteristics promoted by the Portfolio:

- % of companies in the Portfolio deriving significant revenues from:
  - production of, and/or involvement in controversial weapons (including nuclear weapons);
  - extraction and/or production of certain fossil fuels (including thermal coal and oil sands);
  - production or sale of tobacco;
  - production or sale of civilian firearms
- % of companies in the Portfolio the Investment Adviser believes to be violating the United Nations Global Compact ten principles.
- % of government and corporate issuers in the Portfolio with an ESG rating according to the Investment Adviser's proprietary internal scoring system of less than or equal to 1.
- The difference between the weighted average scope 1 and 2 carbon intensity of all the corporate issuers (where available) in the portfolio and weighted average scope 1 and 2 carbon intensity relative to the 50% JPMorgan EMBI Global Diversified 1-3Yr & 50% JPMorgan CEMBI Broad Diversified 1-3Yr.
- The difference between the exposure to companies with less than 10% of women on the company's board of directors of the Portfolio and the 50% JPMorgan EMBI Global Diversified 1-3Yr & 50% JPMorgan CEMBI Broad Diversified 1-3Yr.

***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

This question is not applicable as the Portfolio does not commit to making sustainable investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

This question is not applicable as the Portfolio does not commit to making sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

***- How have the indicators for adverse impacts on sustainability factors been taken into account?***

Not applicable.

***- How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Not applicable.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

Yes, this Portfolio considers principal adverse impacts on sustainability factors (PAIs) across the environmental and/or social pillars. PAIs are taken into account qualitatively through the application of the binding ESG Criteria outlined above. On a non-binding and materiality basis, PAIs are also considered through firm-wide and investment team specific engagement. Additional information on which PAIs are taken into account are available on our website and will also be available in the Portfolio's annual report pursuant to SFDR Article 11.

☐ No

## What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investments objectives and risk tolerance.

The Investment Adviser implements the ESG Criteria on a binding basis into its investment process, as described above.

In addition to applying the ESG Criteria as set forth above the Investment Adviser may integrate ESG factors with traditional fundamental factors as part of its fundamental research process to seek to: (i) determine whether a particular fixed income security and/or sector is suitable and attractively priced for investment and (ii) assess their potential impact on the credit quality and spreads of a particular fixed income security. Traditional fundamental factors that the Investment Adviser may consider on a non-binding basis include, but are not limited to, leverage, earnings, enterprise value, industry trends and macroeconomic factors. ESG factors that the Investment Adviser may consider include, but are not limited to, carbon intensity and emissions profiles, workplace health and safety and cyber risk, stakeholder relations, employee relations, management incentives, governance structure and practices, environmental issues, physical climate risk exposure, loan servicer governance and controversies and labour practices. The identification of a risk related to an ESG factor will not necessarily exclude a particular fixed income security and/or sector that, in the Investment Adviser's view, is otherwise suitable and attractively priced for investment. The relevance of specific traditional fundamental factors and ESG factors to the fundamental investment process varies across asset classes, sectors and strategies. The Investment Adviser may utilise data sources provided by third party vendors and/or engage directly with issuers when assessing the above factors. The Investment Adviser employs a dynamic fundamental investment process that considers a wide range of factors, and no one factor or consideration is determinative.

The Investment Adviser intends to engage with corporate issuers in this Portfolio that the Investment Adviser believes have an under-representation of women on their board of directors. The threshold for engagement on this topic is currently set at 10% (i.e. boards with fewer than 10% of their members being women fall below the threshold), but may be changed at discretion of the Investment Adviser without prior notice to Shareholders (who may obtain details of the current threshold at any point from the Investment Adviser). The Investment Adviser may invest in a corporate issuer prior to or without engaging with such corporate issuer.

The Investment Adviser intends to engage with corporate issuers in this Portfolio that the Investment Adviser believes to have low ESG credentials, with the objective to encourage issuers to improve their ESG practices relative to peers. The Investment Adviser may invest in a corporate issuer prior to or without engaging with such corporate issuer.

## ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

- The Portfolio implements the exclusionary screens as set forth in the ESG Criteria, further described above.
- The Portfolio excludes government and corporate issuers that have the lowest category of ESG ratings according to the Investment Adviser's proprietary internal scoring system at the time of purchasing, however, that the Portfolio may account for less than 10% in such issuers.
- The Portfolio aims to target a lower weighted average carbon intensity relative to the 50% JPMorgan EMBI Global Diversified 1-3Yr & 50% JPMorgan CEMBI Broad Diversified 1-3Yr benchmark.
- The Portfolio aims to target a lower exposure relative to the 50% JPMorgan EMBI Global Diversified 1-3Yr & 50% JPMorgan CEMBI Broad Diversified 1-3Yr, to companies with less than 10% of women on the company's board of directors.

***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The ESG Criteria is not designed to reduce investments considered prior to the application of this strategy by a committed minimum amount. The exclusionary screens are intended to ensure that issuers engaged in certain activities are entirely excluded from the Portfolio and is expected to remove between 0-10% of the Reference Portfolio/Benchmark.

***What is the policy to assess good governance practices of the investee companies?***

The Portfolio leverages Goldman Sachs Asset Management's proprietary approach to identifying and evaluating global norms violators and issuers that may be engaged in poor governance practices, in particular with respect to sound management structures, employee relations, remuneration of staff and tax compliance.

This proprietary approach seeks to identify, review, evaluate and monitor companies that are flagged by external data providers as being in violation of, or otherwise not aligned with, the United Nation Global Compact (UNGC) principles, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights as well as companies that have received high controversy scores (including significant governance controversies, severe labour rights controversies and severe tax compliance controversies). Following review of these external data inputs, companies that the Investment Adviser believes to have an ongoing and serious violation and/or are considered to not be following good governance practices with insufficient remediation will be excluded from the Portfolio. This list of companies will be reviewed on at least a semi-annual basis. The Investment Adviser may not be able to readily sell securities that are intended for exclusion from the Portfolio based on this review (for example, due to liquidity issues or for other reasons outside of the Investment Manager's control), however, will seek to divest as soon as possible in an orderly manner and in the best interests of Shareholders.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

## What is the asset allocation planned for this financial product?

**Asset allocation** describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

At least 80% of investments will be aligned to the environmental and/or social characteristics promoted by this Portfolio, as noted above. Up to 20% may be held in cash, derivatives and issuers for which data is lacking and which fall into the lowest ESG category or otherwise become eligible for exclusion after purchase but cannot be readily disposed of.

**How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

This question is not applicable

## To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Portfolio does not currently commit to invest in any “sustainable investments” within the meaning of the EU Taxonomy and therefore its alignment with the Taxonomy is 0%. However, the position will be kept under review as the underlying rules are finalised and the availability of reliable data increases over time.

## Does the financial product invest in fossil gas and/or Nuclear energy related activities that comply with the EU Taxonomy?

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

## What is the minimum share of investments in transitional and enabling activities?

As the Portfolio does not commit to invest any “sustainable investment” within the meaning of the EU Taxonomy, the minimum share of investments in transitional and enabling activities within the meaning of the EU Taxonomy is therefore also set at 0%.

<sup>1</sup>Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Portfolio promotes environmental and social characteristics but does not commit to making any sustainable investments. As a consequence, the Portfolio does not commit to a minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

**What is the minimum share of socially sustainable investments?**

This question is not applicable as the Portfolio does not commit to make socially sustainable investments.

**What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?**

Investments included under “#2 Other” include cash for liquidity purposes, derivatives for efficient portfolio management and issuers for which data is lacking or which fall into the lowest ESG category or otherwise become eligible for exclusion after purchase but cannot be readily disposed of. These may be used to achieve the investment objective of the Portfolio but neither promote the environmental or social characteristics of the Portfolio, nor qualify as sustainable investments. The percentage shown is expected to be the maximum which may be held in these instruments but the actual percentage may vary from time to time.

These financial instruments are not subject to any minimum environmental or social safeguards.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

Not applicable

**Where can I find more product specific information online?**

### Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

| Does this financial product have a sustainable investment objective?                                                                                                                                                                                                                                                                                                                                                           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <input checked="" type="radio"/> <input type="radio"/> Yes                                                                                                                                                                                                                                                                                                                                                                     | <input type="radio"/> <input checked="" type="radio"/> No                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

## What environmental and/or social characteristics are promoted by this financial product?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The Investment Adviser implements an approach to Environmental, Social and Governance (ESG) considerations into its fundamental investment process as set forth below (the "ESG Criteria"). This consists of: (i) exclusionary screens; (ii) exclusions based on proprietary ESG ratings; (iii) portfolio level targets set forth below.

As part of the ESG investment process, the Investment Adviser will adhere to the ESG Criteria by avoiding investment in debt securities issued by corporate and sovereign issuers that are, in the opinion of the Investment Adviser, directly engaged in, and/or deriving significant revenues from the following activities:

- production of, and/or involvement in controversial weapons (including nuclear weapons);
- extraction and/or production of certain fossil fuels (including thermal coal and oil sands);
- production or sale of tobacco;
- production or sale of civilian firearms

Information on the criteria applied when assessing the aforementioned revenues may be found at the following [link](#).

The Portfolio will also seek to exclude from its investment universe companies the Investment Adviser believes to be violating the United Nations Global Compact's ten principles (which are widely recognised corporate sustainability principles that meet fundamental responsibilities in the areas of human rights, labour, environment and anti-corruption) using the proprietary approach to assess good governance practices described below as well as data provided by third party vendors.

Adherence to these ESG Criteria will be based on thresholds pre-determined by the Investment Adviser in its sole discretion and will be applied to proprietary data and/or data provided by one or more third party vendor(s). The Investment Adviser will rely on third-party data that it believes to be reliable, but it does not guarantee the accuracy of such third-party data. The Investment Adviser, in its sole discretion, retains the right to disapply data provided by third party vendors where it deems the data to be inaccurate or inappropriate. In some cases, data on specific companies may not be available or may be estimated by the Investment Adviser using internal processes or reasonable estimates. Potential omissions from the ESG Criteria may include but are not limited to newly listed companies to which a third party vendor may not yet have data mapped. In the course of gathering data, vendors may make certain value judgements. The Investment Adviser does not verify those judgements, nor quantify their impact upon its analysis. The Investment Adviser in its sole discretion may periodically update its screening process, amend the type of activities that are excluded for investment or revise the thresholds applicable to any such activities.

Additionally, the screening process for the Portfolio generally excludes government and corporate issuers that have the lowest category of ESG ratings according to the Investment Adviser's proprietary internal scoring system. The government and corporate issuers with the lowest ESG ratings according to the Investment Adviser's proprietary internal scoring system generally account for less than 10% of the issuers for which the Investment Adviser has assigned an internal ESG rating. The Portfolio may invest in a government or corporate issuer prior to such issuer receiving an internal ESG rating. There are instances where an internal ESG rating may not be available, which include but are not limited to, in-kind transfers, corporate actions, new issues, holdings that are soon to reach their maturity date, and/or certain short-term holdings.

The Investment Adviser in its sole discretion may periodically update its screening process, or revise the thresholds applicable to any such activities. There may be instances where existing issuers in the Portfolio that were not in the lowest category of ESG ratings or otherwise excluded pursuant to the ESG Criteria above at the time of purchase are subsequently determined by the Investment Adviser to either fall into the lowest ESG category or otherwise become eligible for exclusion based on the ESG Criteria above. The Investment Adviser will not be required to sell such securities and may not be able to sell such securities, for example, where they are not readily disposable due to liquidity issues or other reasons.

The Portfolio aims to target a lower exposure, relative to the Reference Portfolio/Benchmark noted below, to companies with certain pre-defined thresholds for diversity on company boards as measured by percentage of women on the company's board of directors. The current pre-defined threshold has been set by the Investment Adviser for the Portfolio to hold less than reference benchmark weight in issuers that have less than 10% women on board (i.e. boards with fewer than 10% of their members being women fall below the threshold), but may be changed at discretion of the Investment Adviser without prior notice to Shareholders (who may obtain details of the current threshold at any point from the Investment Adviser).

The Portfolio aims to target a lower weighted average carbon intensity relative to the Reference Portfolio/Benchmark noted below. Weighted average carbon intensity is a measure of the Scope 1 and 2 carbon emissions of a corporate issuer weighted by average portfolio weight. This measure is calculated by the Investment Adviser, using third party data. Scope 1 emissions include all direct Greenhouse Gas emissions from sources owned or controlled by the company. Scope 2 emissions include indirect GHG emissions from consumption of purchased electricity, heat, or steam, and the transmission and distribution (T&D) losses associated with some purchased utilities. There may be instances where Scope 1 and Scope 2 carbon emissions data may not be available for a particular corporate issuer.

The Investment Adviser will monitor these targets on an ongoing basis and seek to adjust the Portfolio on at least a quarterly basis to adhere to the targets.

Please note that the Reference Portfolio/Benchmark is not an ESG benchmark and that the Portfolio is not managed in view of achieving the long-term global warming objectives of the Paris Agreement. No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Portfolio.

***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

The following indicators are used to measure the attainment of the environmental and/or social characteristics promoted by the Portfolio:

- % of companies in the Portfolio deriving significant revenues from:
  - production of, and/or involvement in controversial weapons (including nuclear weapons);
  - extraction and/or production of certain fossil fuels (including thermal coal and oil sands);
  - production or sale of tobacco;
  - production or sale of civilian firearms
- % of companies in the Portfolio the Investment Adviser believes to be violating the United Nations Global Compact ten principles.
- % of government and corporate issuers in the Portfolio with an ESG rating according to the Investment Adviser's proprietary internal scoring system of less than or equal to 1.
- The difference between the exposure to companies with less than 10% of women on the company's board of directors of the Portfolio and the Reference/Portfolio Benchmark.
- The difference between the weighted average scope 1 and 2 carbon intensity of all the corporate issuers (where available) in the portfolio and weighted average scope 1 and 2 carbon intensity of the Reference Portfolio/Benchmark.

***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

This question is not applicable as the Portfolio does not commit to making sustainable investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

This question is not applicable as the Portfolio does not commit to making sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

***- How have the indicators for adverse impacts on sustainability factors been taken into account?***

Not applicable.

***- How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Not applicable.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

Yes, this Portfolio considers principal adverse impacts on sustainability factors (PAIs) across the environmental and/or social pillars. PAIs are taken into account qualitatively through the application of the binding ESG Criteria outlined above. On a non-binding and materiality basis, PAIs are also considered through firm-wide and investment team specific engagement. Additional information on which PAIs are taken into account are available on our website and will also be available in the Portfolio's annual report pursuant to SFDR Article 11.

☐ No

## What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investments objectives and risk tolerance.

The Investment Adviser implements the ESG Criteria on a binding basis into its investment process, as described above.

In addition to applying the ESG Criteria as set forth above the Investment Adviser may integrate ESG factors with traditional fundamental factors as part of its fundamental research process to seek to: (i) determine whether a particular fixed income security and/or sector is suitable and attractively priced for investment and (ii) assess their potential impact on the credit quality and spreads of a particular fixed income security. Traditional fundamental factors that the Investment Adviser may consider on a non-binding basis include, but are not limited to, leverage, earnings, enterprise value, industry trends and macroeconomic factors. ESG factors that the Investment Adviser may consider include, but are not limited to, carbon intensity and emissions profiles, workplace health and safety and cyber risk, stakeholder relations, employee relations, management incentives, governance structure and practices, environmental issues, physical climate risk exposure, loan servicer governance and controversies and labour practices. The identification of a risk related to an ESG factor will not necessarily exclude a particular fixed income security and/or sector that, in the Investment Adviser's view, is otherwise suitable and attractively priced for investment. The relevance of specific traditional fundamental factors and ESG factors to the fundamental investment process varies across asset classes, sectors and strategies. The Investment Adviser may utilise data sources provided by third party vendors and/or engage directly with issuers when assessing the above factors. The Investment Adviser employs a dynamic fundamental investment process that considers a wide range of factors, and no one factor or consideration is determinative.

The Investment Adviser intends to engage with corporate issuers in this Portfolio that the Investment Adviser believes have an under-representation of women on their board of directors. The threshold for engagement on this topic is currently set at 10% (i.e. boards with fewer than 10% of their members being women fall below the threshold), but may be changed at discretion of the Investment Adviser without prior notice to Shareholders (who may obtain details of the current threshold at any point from the Investment Adviser). The Investment Adviser may invest in a corporate issuer prior to or without engaging with such corporate issuer.

The Investment Adviser intends to engage with corporate and sovereign issuers in this Portfolio that the Investment Adviser believes to have low ESG credentials, with the objective to encourage corporate issuers to improve their ESG practices relative to peers and to encourage sovereigns to improve their overall environmental performance and to encourage enhanced disclosures of climate related metrics. The Investment Adviser may invest in an issuer prior to or without engaging with such issuer.

## ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

- The Portfolio implements the exclusionary screens as set forth in the ESG Criteria, further described above.
- The Portfolio excludes government and corporate issuers that have the lowest category of ESG ratings according to the Investment Adviser's proprietary internal scoring system at the time of purchasing, however, that the Portfolio may account for less than 10% in such issuers.
- The Portfolio aims to target a lower exposure, relative to the Reference Portfolio/Benchmark, to companies with less than 10% of women on the company's board of directors.
- The Portfolio aims to target a lower weighted average carbon intensity relative to the Reference Portfolio/Benchmark.

***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The ESG Criteria is not designed to reduce investments considered prior to the application of this strategy by a committed minimum amount. The exclusionary screens are intended to ensure that issuers engaged in certain activities are entirely excluded from the Portfolio and is expected to remove between 0-10% of the Reference Portfolio/Benchmark.

***What is the policy to assess good governance practices of the investee companies?***

The Portfolio leverages Goldman Sachs Asset Management's proprietary approach to identifying and evaluating global norms violators and issuers that may be engaged in poor governance practices, in particular with respect to sound management structures, employee relations, remuneration of staff and tax compliance.

This proprietary approach seeks to identify, review, evaluate and monitor companies that are flagged by external data providers as being in violation of, or otherwise not aligned with, the United Nation Global Compact (UNGC) principles, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights as well as companies that have received high controversy scores (including significant governance controversies, severe labour rights controversies and severe tax compliance controversies). Following review of these external data inputs, companies that the Investment Adviser believes to have an ongoing and serious violation and/or are considered to not be following good governance practices with insufficient remediation will be excluded from the Portfolio. This list of companies will be reviewed on at least a semi-annual basis. The Investment Adviser may not be able to readily sell securities that are intended for exclusion from the Portfolio based on this review (for example, due to liquidity issues or for other reasons outside of the Investment Manager's control), however, will seek to divest as soon as possible in an orderly manner and in the best interests of Shareholders.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

## What is the asset allocation planned for this financial product?

**Asset allocation** describes the share of investments in specific assets.

At least 50% of investments will be aligned to the environmental and/or social characteristics promoted by this Portfolio, as noted above. Up to 50% may be held in cash at custodian account level, derivatives and issuers for which data is lacking and issuers which fall into the lowest ESG category or otherwise become eligible for exclusion after purchase but cannot be readily disposed of.

**Taxonomy-aligned activities** are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

**How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

This question is not applicable

## To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Portfolio does not currently commit to invest in any “sustainable investments” within the meaning of the EU Taxonomy and therefore its alignment with the Taxonomy is 0%. However, the position will be kept under review as the underlying rules are finalised and the availability of reliable data increases over time.

## Does the financial product invest in fossil gas and/or Nuclear energy related activities that comply with the EU Taxonomy?

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

\* For the purpose of these graphs, ‘sovereign bonds’ consist of all sovereign exposures

## What is the minimum share of investments in transitional and enabling activities?

As the Portfolio does not commit to invest any “sustainable investment” within the meaning of the EU Taxonomy, the minimum share of investments in transitional and enabling activities within the meaning of the EU Taxonomy is therefore also set at 0%.

<sup>1</sup>Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Portfolio promotes environmental and social characteristics but does not commit to making any sustainable investments. As a consequence, the Portfolio does not commit to a minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

**What is the minimum share of socially sustainable investments?**

This question is not applicable as the Portfolio does not commit to make socially sustainable investments.

**What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?**

Investments included under “#2 Other” include cash at custodian account level, derivatives for efficient portfolio management and issuers for which data is lacking or which fall into the lowest ESG category or otherwise become eligible for exclusion after purchase but cannot be readily disposed of. When establishing the alignment of any securitisations or asset-backed commercial paper held in the Fund or repurchase agreements in which it may invest with the E/S characteristics promoted by the Fund, the counterparty/issuer is assessed against the ESG Criteria described above and not the underlying collateral. These may be used to achieve the investment objective of the Portfolio but neither promote the environmental or social characteristics of the Portfolio, nor qualify as sustainable investments. The percentage shown is expected to be the maximum which may be held in these instruments but the actual percentage may vary from time to time.

These financial instruments are not subject to any minimum environmental or social safeguards.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

Not applicable

**Where can I find more product specific information online?**

More product-specific information can be found on the website:

## Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name:  
Goldman Sachs Europe High Yield Bond Portfolio

Legal entity identifier:  
549300LJPZ8FPFQBHO96

### Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

| Does this financial product have a sustainable investment objective?                                                                                                                                                                                                                                                                                                                                                           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <input checked="" type="radio"/> <input type="radio"/> Yes                                                                                                                                                                                                                                                                                                                                                                     | <input type="radio"/> <input checked="" type="radio"/> No                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

## What environmental and/or social characteristics are promoted by this financial product?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The Investment Adviser implements an approach to Environmental, Social and Governance (ESG) considerations into its fundamental investment process as set forth below (the "ESG Criteria"). This consists of: (i) exclusionary screens; (ii) exclusions based on proprietary ESG ratings; (iii) portfolio level targets set forth below.

As part of the ESG investment process, the Investment Adviser will adhere to the ESG Criteria by avoiding investment in debt securities issued by corporate and sovereign issuers that are, in the opinion of the Investment Adviser, directly engaged in, and/or deriving significant revenues from the following activities:

- production of, and/or involvement in controversial weapons (including nuclear weapons);
- extraction and/or production of certain fossil fuels (including thermal coal and oil sands);
- production or sale of tobacco;
- production or sale of civilian firearms

Information on the criteria applied when assessing the aforementioned revenues may be found at the following [link](#).

The Portfolio will also seek to exclude from its investment universe companies the Investment Adviser believes to be violating the United Nations Global Compact's ten principles (which are widely recognised corporate sustainability principles that meet fundamental responsibilities in the areas of human rights, labour, environment and anti-corruption) using the proprietary approach to assess good governance practices described below as well as data provided by third party vendors.

Adherence to these ESG Criteria will be based on thresholds pre-determined by the Investment Adviser in its sole discretion and will be applied to proprietary data and/or data provided by one or more third party vendor(s). The Investment Adviser will rely on third-party data that it believes to be reliable, but it does not guarantee the accuracy of such third-party data. The Investment Adviser, in its sole discretion, retains the right to disapply data provided by third party vendors where it deems the data to be inaccurate or inappropriate. In some cases, data on specific companies may not be available or may be estimated by the Investment Adviser using internal processes or reasonable estimates. Potential omissions from the ESG Criteria may include but are not limited to newly listed companies to which a third party vendor may not yet have data mapped. In the course of gathering data, vendors may make certain value judgements. The Investment Adviser does not verify those judgements, nor quantify their impact upon its analysis. The Investment Adviser in its sole discretion may periodically update its screening process, amend the type of activities that are excluded for investment or revise the thresholds applicable to any such activities.

Additionally, the screening process for the Portfolio generally excludes government and corporate issuers that have the lowest category of ESG ratings according to the Investment Adviser's proprietary internal scoring system. The government and corporate issuers with the lowest ESG ratings according to the Investment Adviser's proprietary internal scoring system generally account for less than 10% of the issuers for which the Investment Adviser has assigned an internal ESG rating. The Portfolio may invest in a government or corporate issuer prior to such issuer receiving an internal ESG rating. There are instances where an internal ESG rating may not be available, which include but are not limited to, in-kind transfers, corporate actions, new issues, holdings that are soon to reach their maturity date, and/or certain short-term holdings.

The Investment Adviser in its sole discretion may periodically update its screening process, or revise the thresholds applicable to any such activities. There may be instances where existing issuers in the Portfolio that were not in the lowest category of ESG ratings or otherwise excluded pursuant to the ESG Criteria above at the time of purchase are subsequently determined by the Investment Adviser to either fall into the lowest ESG category or otherwise become eligible for exclusion based on the ESG Criteria above. The Investment Adviser will not be required to sell such securities and may not be able to sell such securities, for example, where they are not readily disposable due to liquidity issues or other reasons.

The Portfolio aims to target a lower exposure, relative to the Reference Portfolio/Benchmark noted below, to companies with certain pre-defined thresholds for diversity on company boards as measured by percentage of women on the company's board of directors. The current pre-defined threshold has been set by the Investment Adviser for the Portfolio to hold less than reference benchmark weight in issuers that have less than 10% women on board (i.e. boards with fewer than 10% of their members being women fall below the threshold), but may be changed at discretion of the Investment Adviser without prior notice to Shareholders (who may obtain details of the current threshold at any point from the Investment Adviser).

The Portfolio aims to target a lower weighted average carbon intensity relative to the Reference Portfolio/Benchmark noted below. Weighted average carbon intensity is a measure of the Scope 1 and 2 carbon emissions of a corporate issuer weighted by average portfolio weight. This measure is calculated by the Investment Adviser, using third party data. Scope 1 emissions include all direct Greenhouse Gas emissions from sources owned or controlled by the company. Scope 2 emissions include indirect GHG emissions from consumption of purchased electricity, heat, or steam, and the transmission and distribution (T&D) losses associated with some purchased utilities. There may be instances where Scope 1 and Scope 2 carbon emissions data may not be available for a particular corporate issuer.

The Investment Adviser will monitor these targets on an ongoing basis and seek to adjust the Portfolio on at least a quarterly basis to adhere to the targets.

Please note that the Reference Portfolio/Benchmark is not an ESG benchmark and that the Portfolio is not managed in view of achieving the long-term global warming objectives of the Paris Agreement. No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Portfolio.

***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

The following indicators are used to measure the attainment of the environmental and/or social characteristics promoted by the Portfolio:

- % of companies in the Portfolio deriving significant revenues from:
  - production of, and/or involvement in controversial weapons (including nuclear weapons);
  - extraction and/or production of certain fossil fuels (including thermal coal and oil sands);
  - production or sale of tobacco;
  - production or sale of civilian firearms
- % of companies in the Portfolio the Investment Adviser believes to be violating the United Nations Global Compact ten principles.
- % of government and corporate issuers in the Portfolio with an ESG rating according to the Investment Adviser's proprietary internal scoring system of less than or equal to 1.
- The difference between the exposure to companies with less than 10% of women on the company's board of directors of the Portfolio and the Reference/Portfolio Benchmark.
- The difference between the weighted average scope 1 and 2 carbon intensity of all the corporate issuers (where available) in the portfolio and weighted average scope 1 and 2 carbon intensity of the Reference Portfolio/Benchmark.

***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

This question is not applicable as the Portfolio does not commit to making sustainable investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

This question is not applicable as the Portfolio does not commit to making sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

***- How have the indicators for adverse impacts on sustainability factors been taken into account?***

Not applicable.

***- How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Not applicable.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

Yes, this Portfolio considers principal adverse impacts on sustainability factors (PAIs) across the environmental and/or social pillars. PAIs are taken into account qualitatively through the application of the binding ESG Criteria outlined above. On a non-binding and materiality basis, PAIs are also considered through firm-wide and investment team specific engagement. Additional information on which PAIs are taken into account are available on our website and will also be available in the Portfolio's annual report pursuant to SFDR Article 11.

☐ No

## What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investments objectives and risk tolerance.

The Investment Adviser implements the ESG Criteria on a binding basis into its investment process, as described above.

In addition to applying the ESG Criteria as set forth above the Investment Adviser may integrate ESG factors with traditional fundamental factors as part of its fundamental research process to seek to: (i) determine whether a particular fixed income security and/or sector is suitable and attractively priced for investment and (ii) assess their potential impact on the credit quality and spreads of a particular fixed income security. Traditional fundamental factors that the Investment Adviser may consider on a non-binding basis include, but are not limited to, leverage, earnings, enterprise value, industry trends and macroeconomic factors. ESG factors that the Investment Adviser may consider include, but are not limited to, carbon intensity and emissions profiles, workplace health and safety and cyber risk, stakeholder relations, employee relations, management incentives, governance structure and practices, environmental issues, physical climate risk exposure, loan servicer governance and controversies and labour practices. The identification of a risk related to an ESG factor will not necessarily exclude a particular fixed income security and/or sector that, in the Investment Adviser's view, is otherwise suitable and attractively priced for investment. The relevance of specific traditional fundamental factors and ESG factors to the fundamental investment process varies across asset classes, sectors and strategies. The Investment Adviser may utilise data sources provided by third party vendors and/or engage directly with issuers when assessing the above factors. The Investment Adviser employs a dynamic fundamental investment process that considers a wide range of factors, and no one factor or consideration is determinative.

The Investment Adviser intends to engage with corporate issuers in this Portfolio that the Investment Adviser believes have an under-representation of women on their board of directors. The threshold for engagement on this topic is currently set at 10% (i.e. boards with fewer than 10% of their members being women fall below the threshold), but may be changed at discretion of the Investment Adviser without prior notice to Shareholders (who may obtain details of the current threshold at any point from the Investment Adviser). The Investment Adviser may invest in a corporate issuer prior to or without engaging with such corporate issuer.

The Investment Adviser intends to engage with corporate issuers in this Portfolio that the Investment Adviser believes to have low ESG credentials, with the objective to encourage issuers to improve their ESG practices relative to peers. The Investment Adviser may invest in a corporate issuer prior to or without engaging with such corporate issuer.

## ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

- The Portfolio implements the exclusionary screens as set forth in the ESG Criteria, further described above.
- The Portfolio excludes government and corporate issuers that have the lowest category of ESG ratings according to the Investment Adviser's proprietary internal scoring system at the time of purchasing, however, that the Portfolio may account for less than 10% in such issuers.
- The Portfolio aims to target a lower exposure, relative to the Reference Portfolio/Benchmark, to companies with less than 10% of women on the company's board of directors.
- The Portfolio aims to target a lower weighted average carbon intensity relative to the Reference Portfolio/Benchmark.

***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The ESG Criteria is not designed to reduce investments considered prior to the application of this strategy by a committed minimum amount. The exclusionary screens are intended to ensure that issuers engaged in certain activities are entirely excluded from the Portfolio and is expected to remove between 0-10% of the Reference Portfolio/Benchmark.

***What is the policy to assess good governance practices of the investee companies?***

The Portfolio leverages Goldman Sachs Asset Management's proprietary approach to identifying and evaluating global norms violators and issuers that may be engaged in poor governance practices, in particular with respect to sound management structures, employee relations, remuneration of staff and tax compliance.

This proprietary approach seeks to identify, review, evaluate and monitor companies that are flagged by external data providers as being in violation of, or otherwise not aligned with, the United Nation Global Compact (UNGC) principles, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights as well as companies that have received high controversy scores (including significant governance controversies, severe labour rights controversies and severe tax compliance controversies). Following review of these external data inputs, companies that the Investment Adviser believes to have an ongoing and serious violation and/or are considered to not be following good governance practices with insufficient remediation will be excluded from the Portfolio. This list of companies will be reviewed on at least a semi-annual basis. The Investment Adviser may not be able to readily sell securities that are intended for exclusion from the Portfolio based on this review (for example, due to liquidity issues or for other reasons outside of the Investment Manager's control), however, will seek to divest as soon as possible in an orderly manner and in the best interests of Shareholders.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

## What is the asset allocation planned for this financial product?

**Asset allocation** describes the share of investments in specific assets.

At least 80% of investments will be aligned to the environmental and/or social characteristics promoted by this Portfolio, as noted above. Up to 20% may be held in cash, mutual funds, ETFs and derivatives and issuers for which data is lacking and which fall into the lowest ESG category or otherwise become eligible for exclusion after purchase but cannot be readily disposed of.

**Taxonomy-aligned activities** are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

**How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

This question is not applicable

## To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Portfolio does not currently commit to invest in any “sustainable investments” within the meaning of the EU Taxonomy and therefore its alignment with the Taxonomy is 0%. However, the position will be kept under review as the underlying rules are finalised and the availability of reliable data increases over time.

## Does the financial product invest in fossil gas and/or Nuclear energy related activities that comply with the EU Taxonomy?

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

## What is the minimum share of investments in transitional and enabling activities?

As the Portfolio does not commit to invest any “sustainable investment” within the meaning of the EU Taxonomy, the minimum share of investments in transitional and enabling activities within the meaning of the EU Taxonomy is therefore also set at 0%.

<sup>1</sup>Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Portfolio promotes environmental and social characteristics but does not commit to making any sustainable investments. As a consequence, the Portfolio does not commit to a minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

**What is the minimum share of socially sustainable investments?**

This question is not applicable as the Portfolio does not commit to make socially sustainable investments.

**What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?**

Investments included under “#2 Other” include cash, mutual funds and ETFs for liquidity purposes, derivatives for efficient portfolio management and issuers for which data is lacking or which fall into the lowest ESG category or otherwise become eligible for exclusion after purchase but cannot be readily disposed of. These may be used to achieve the investment objective of the Portfolio but neither promote the environmental or social characteristics of the Portfolio, nor qualify as sustainable investments. The percentage shown is expected to be the maximum which may be held in these instruments but the actual percentage may vary from time to time.

These financial instruments are not subject to any minimum environmental or social safeguards.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

Not applicable

**Where can I find more product specific information online?**

More product-specific information can be found on the website:

## Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name:  
Goldman Sachs Global Income Bond Portfolio

Legal entity identifier:  
5493006PHV61PBKO2666

### Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

| Does this financial product have a sustainable investment objective?                                                                                                                                                                                                                                                                                                                                                           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <input checked="" type="radio"/> <input type="radio"/> Yes                                                                                                                                                                                                                                                                                                                                                                     | <input type="radio"/> <input checked="" type="radio"/> No                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

## What environmental and/or social characteristics are promoted by this financial product?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The Investment Adviser implements an approach to Environmental, Social and Governance (ESG) considerations into its fundamental investment process as set forth below (the "ESG Criteria"). This consists of: (i) exclusionary screens; (ii) exclusions based on proprietary ESG ratings; (iii) portfolio level targets set forth below.

As part of the ESG investment process, the Investment Adviser will adhere to the ESG Criteria by avoiding investment in debt securities issued by corporate and sovereign issuers that are, in the opinion of the Investment Adviser, directly engaged in, and/or deriving significant revenues from the following activities:

- production of, and/or involvement in controversial weapons (including nuclear weapons);
- extraction and/or production of certain fossil fuels (including thermal coal and oil sands);
- production or sale of tobacco;
- production or sale of civilian firearms

Information on the criteria applied when assessing the aforementioned revenues may be found at the following [link](#).

The Portfolio will also seek to exclude from its investment universe companies the Investment Adviser believes to be violating the United Nations Global Compact's ten principles (which are widely recognised corporate sustainability principles that meet fundamental responsibilities in the areas of human rights, labour, environment and anti-corruption) using the proprietary approach to assess good governance practices described below as well as data provided by third party vendors.

Adherence to these ESG Criteria will be based on thresholds pre-determined by the Investment Adviser in its sole discretion and will be applied to proprietary data and/or data provided by one or more third party vendor(s). The Investment Adviser will rely on third-party data that it believes to be reliable, but it does not guarantee the accuracy of such third-party data. The Investment Adviser, in its sole discretion, retains the right to disapply data provided by third party vendors where it deems the data to be inaccurate or inappropriate. In some cases, data on specific companies may not be available or may be estimated by the Investment Adviser using internal processes or reasonable estimates. Potential omissions from the ESG Criteria may include but are not limited to newly listed companies to which a third party vendor may not yet have data mapped. In the course of gathering data, vendors may make certain value judgements. The Investment Adviser does not verify those judgements, nor quantify their impact upon its analysis. The Investment Adviser in its sole discretion may periodically update its screening process, amend the type of activities that are excluded for investment or revise the thresholds applicable to any such activities.

Additionally, the screening process for the Portfolio generally excludes government and corporate issuers that have the lowest category of ESG ratings according to the Investment Adviser's proprietary internal scoring system. The government and corporate issuers with the lowest ESG ratings according to the Investment Adviser's proprietary internal scoring system generally account for less than 10% of the issuers for which the Investment Adviser has assigned an internal ESG rating. The Portfolio may invest in a government or corporate issuer prior to such issuer receiving an internal ESG rating. There are instances where an internal ESG rating may not be available, which include but are not limited to, in-kind transfers, corporate actions, new issues, holdings that are soon to reach their maturity date, and/or certain short-term holdings.

The Investment Adviser in its sole discretion may periodically update its screening process, or revise the thresholds applicable to any such activities. There may be instances where existing issuers in the Portfolio that were not in the lowest category of ESG ratings or otherwise excluded pursuant to the ESG Criteria above at the time of purchase are subsequently determined by the Investment Adviser to either fall into the lowest ESG category or otherwise become eligible for exclusion based on the ESG Criteria above. The Investment Adviser will not be required to sell such securities and may not be able to sell such securities, for example, where they are not readily disposable due to liquidity issues or other reasons.

The Portfolio aims to target a lower exposure, relative to the 35% Bloomberg Barclays Global Aggregate Corporate 1-10 yr Index USD hedged / 40% Ice BofA US HY Master Constrained Index / 25% JP Morgan EMBI Global Diversified Index, to companies with certain pre-defined thresholds for diversity on company boards as measured by percentage of women directors on the company's board of directors. The current pre-defined threshold has been set by the Investment Adviser for the Portfolio to hold less than 35% Bloomberg Barclays Global Aggregate Corporate 1-10 yr Index USD hedged / 40% Ice BofA US HY Master Constrained Index / 25% JP Morgan EMBI Global Diversified Index weight in issuers that have less than 10% women on board (i.e. boards with fewer than 10% of their members being women fall below the threshold), but may be changed at discretion of the Investment Adviser without prior notice to Shareholders (who may obtain details of the current threshold at any point from the Investment Adviser).

The Portfolio aims to target a lower weighted average carbon intensity relative to the 35% Bloomberg Barclays Global Aggregate Corporate 1-10 yr Index USD hedged / 40% Ice BofA US HY Master Constrained Index / 25% JP Morgan EMBI Global Diversified Index. Weighted average carbon intensity is a measure of the Scope 1 and 2 carbon emissions of a corporate issuer weighted by average portfolio weight. This measure is calculated by the Investment Adviser, using third party data. Scope 1 emissions include all direct Greenhouse Gas emissions from sources owned or controlled by the company. Scope 2 emissions include indirect GHG emissions from consumption of purchased electricity, heat, or steam, and the transmission and distribution (T&D) losses associated with some purchased utilities. There may be instances where Scope 1 and Scope 2 carbon emissions data may not be available for a particular corporate issuer.

The Investment Adviser will monitor these targets on an ongoing basis and seek to adjust the Portfolio on at least a quarterly basis to adhere to the targets. Please note that the 35% Bloomberg Barclays Global Aggregate Corporate 1-10 yr Index USD hedged / 40% Ice BofA US HY Master Constrained Index / 25% JP Morgan EMBI Global Diversified Index is not an ESG benchmark and that the Portfolio is not managed in view of achieving the long-term global warming objectives of the Paris Agreement.

Please note that the Reference Portfolio/Benchmark is not an ESG benchmark and that the Portfolio is not managed in view of achieving the long-term global warming objectives of the Paris Agreement. No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Portfolio.

***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

The following indicators are used to measure the attainment of the environmental and/or social characteristics promoted by the Portfolio:

- % of companies in the Portfolio deriving significant revenues from:
  - production of, and/or involvement in controversial weapons (including nuclear weapons);
  - extraction and/or production of certain fossil fuels (including thermal coal and oil sands);
  - production or sale of tobacco;
  - production or sale of civilian firearms
- % of companies in the Portfolio the Investment Adviser believes to be violating the United Nations Global Compact ten principles.
- % of government and corporate issuers in the Portfolio with an ESG rating according to the Investment Adviser's proprietary internal scoring system of less than or equal to 1.
- The difference between the aggregated scope 1 and 2 carbon emissions of all the corporate issuers (where available) in the portfolio and aggregated scope 1 and 2 carbon emissions relative to the 35% Bloomberg Barclays Global Aggregate Corporate 1-10 yr Index USD hedged / 40% Ice BofA US HY Master Constrained Index / 25% JP Morgan EMBI Global Diversified Index.
- The difference between the exposure to companies with less than 10% of women on the company's board of directors of the Portfolio and the 35% Bloomberg Barclays Global Aggregate Corporate 1-10 yr Index USD hedged / 40% Ice BofA US HY Master Constrained Index / 25% JP Morgan EMBI Global Diversified Index.

***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

This question is not applicable as the Portfolio does not commit to making socially sustainable investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

This question is not applicable as the Portfolio does not commit to making sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

***- How have the indicators for adverse impacts on sustainability factors been taken into account?***

Not applicable.

***- How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Not applicable.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

Yes, this Portfolio considers principal adverse impacts on sustainability factors (PAIs) across the environmental and/or social pillars. PAIs are taken into account qualitatively through the application of the binding ESG Criteria outlined above. On a non-binding and materiality basis, PAIs are also considered through firm-wide and investment team specific engagement. Additional information on which PAIs are taken into account are available on our website and will also be available in the Portfolio's annual report pursuant to SFDR Article 11.

☐ No

## What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investments objectives and risk tolerance.

The Investment Adviser implements the ESG Criteria on a binding basis into its investment process, as described above.

In addition to applying the ESG Criteria as set forth above the Investment Adviser may integrate ESG factors with traditional fundamental factors as part of its fundamental research process to seek to: (i) determine whether a particular fixed income security and/or sector is suitable and attractively priced for investment and (ii) assess their potential impact on the credit quality and spreads of a particular fixed income security. Traditional fundamental factors that the Investment Adviser may consider on a non-binding basis include, but are not limited to, leverage, earnings, enterprise value, industry trends and macroeconomic factors. ESG factors that the Investment Adviser may consider include, but are not limited to, carbon intensity and emissions profiles, workplace health and safety and cyber risk, stakeholder relations, employee relations, management incentives, governance structure and practices, environmental issues, physical climate risk exposure, loan servicer governance and controversies and labour practices. The identification of a risk related to an ESG factor will not necessarily exclude a particular fixed income security and/or sector that, in the Investment Adviser's view, is otherwise suitable and attractively priced for investment. The relevance of specific traditional fundamental factors and ESG factors to the fundamental investment process varies across asset classes, sectors and strategies. The Investment Adviser may utilise data sources provided by third party vendors and/or engage directly with issuers when assessing the above factors. The Investment Adviser employs a dynamic fundamental investment process that considers a wide range of factors, and no one factor or consideration is determinative.

The Investment Adviser intends to engage with corporate issuers in this Portfolio that the Investment Adviser believes have an under-representation of women on their board of directors. The threshold for engagement on this topic is currently set at 10% (i.e. boards with fewer than 10% of their members being women fall below the threshold), but may be changed at discretion of the Investment Adviser without prior notice to Shareholders (who may obtain details of the current threshold at any point from the Investment Adviser). The Investment Adviser may invest in a corporate issuer prior to or without engaging with such corporate issuer.

The Investment Adviser intends to engage with corporate and sovereign issuers that the Investment Adviser believes to have low ESG credentials, with the objective to encourage corporate issuers to improve their ESG practices relative to peers and to encourage sovereigns to improve their overall environmental performance and to encourage enhanced disclosures of climate related metrics. The Investment Adviser may invest in an issuer prior to or without engaging with such issuer.

***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

- The Portfolio implements the exclusionary screens as set forth in the ESG Criteria, further described above.
- The Portfolio excludes government and corporate issuers that have the lowest category of ESG ratings according to the Investment Adviser's proprietary internal scoring system at the time of purchasing, however, that the Portfolio may account for less than 10% in such issuers.
- The Portfolio aims to target a lower weighted average carbon intensity relative to the 35% Bloomberg Barclays Global Aggregate Corporate 1-10 yr Index USD hedged / 40% Ice BofA US HY Master Constrained Index / 25% JP Morgan EMBI Global Diversified Index, to companies with less than 10% of women on the company's board of directors.
- The Portfolio aims to target a lower exposure, relative to the 35% Bloomberg Barclays Global Aggregate Corporate 1-10 yr Index USD hedged / 40% Ice BofA US HY Master Constrained Index / 25% JP Morgan EMBI Global Diversified Index.

***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The ESG Criteria is not designed to reduce investments considered prior to the application of this strategy by a committed minimum amount. The exclusionary screens are intended to ensure that issuers engaged in certain activities are entirely excluded from the Portfolio and is expected to remove between 0-10% of the Reference Portfolio/Benchmark.

***What is the policy to assess good governance practices of the investee companies?***

The Portfolio leverages Goldman Sachs Asset Management's proprietary approach to identifying and evaluating global norms violators and issuers that may be engaged in poor governance practices, in particular with respect to sound management structures, employee relations, remuneration of staff and tax compliance.

This proprietary approach seeks to identify, review, evaluate and monitor companies that are flagged by external data providers as being in violation of, or otherwise not aligned with, the United Nation Global Compact (UNGC) principles, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights as well as companies that have received high controversy scores (including significant governance controversies, severe labour rights controversies and severe tax compliance controversies). Following review of these external data inputs, companies that the Investment Adviser believes to have an ongoing and serious violation and/or are considered to not be following good governance practices with insufficient remediation will be excluded from the Portfolio. This list of companies will be reviewed on at least a semi-annual basis. The Investment Adviser may not be able to readily sell securities that are intended for exclusion from the Portfolio based on this review (for example, due to liquidity issues or for other reasons outside of the Investment Manager's control), however, will seek to divest as soon as possible in an orderly manner and in the best interests of Shareholders.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

## What is the asset allocation planned for this financial product?

**Asset allocation** describes the share of investments in specific assets.

At least 50% of investments will be aligned to the environmental and/or social characteristics promoted by this Portfolio, as noted above. Up to 50% may be held in cash, derivatives, mutual funds and collateralised securities, and issuers for which data is lacking and which fall into the lowest ESG category or otherwise become eligible for exclusion after purchase but cannot be readily disposed of.

**Taxonomy-aligned activities** are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

**How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

This question is not applicable

## To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Portfolio does not currently commit to invest in any “sustainable investments” within the meaning of the EU Taxonomy and therefore its alignment with the Taxonomy is 0%. However, the position will be kept under review as the underlying rules are finalised and the availability of reliable data increases over time.

## Does the financial product invest in fossil gas and/or Nuclear energy related activities that comply with the EU Taxonomy?

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

## What is the minimum share of investments in transitional and enabling activities?

As the Portfolio does not commit to invest any “sustainable investment” within the meaning of the EU Taxonomy, the minimum share of investments in transitional and enabling activities within the meaning of the EU Taxonomy is therefore also set at 0%.

<sup>1</sup>Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Portfolio promotes environmental and social characteristics but does not commit to making any sustainable investments. As a consequence, the Portfolio does not commit to a minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

**What is the minimum share of socially sustainable investments?**

This question is not applicable as the Portfolio does not commit to make socially sustainable investments.

**What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?**

Investments included under “#2 Other” include cash for liquidity purposes, derivatives, mutual funds and collateralised securities for efficient portfolio management, and issuers for which data is lacking or which fall into the lowest ESG category or otherwise become eligible for exclusion after purchase but cannot be readily disposed of. These may be used to achieve the investment objective of the Portfolio but neither promote the environmental or social characteristics of the Portfolio, nor qualify as sustainable investments. The percentage shown is expected to be the maximum which may be held in these instruments but the actual percentage may vary from time to time.

These financial instruments are not subject to any minimum environmental or social safeguards.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

Not applicable

**Where can I find more product specific information online?**

More product-specific information can be found on the website:

### Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

| Does this financial product have a sustainable investment objective?                                                                                                                                                                                                                                                                                                                                                           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

## What environmental and/or social characteristics are promoted by this financial product?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The Investment Adviser implements an approach to Environmental, Social and Governance (ESG) considerations into its fundamental investment process as set forth below (the "ESG Criteria"). This consists of: (i) exclusions based on proprietary ESG ratings; (ii) portfolio level targets as set forth below.

Additionally, the screening process for the Portfolio generally excludes government and corporate issuers that have the lowest category of ESG ratings according to the Investment Adviser's proprietary internal scoring system. The government and corporate issuers with the lowest ESG ratings according to the Investment Adviser's proprietary internal scoring system generally account for less than 10% of the issuers for which the Investment Adviser has assigned an internal ESG rating. The Portfolio may invest in a government or corporate issuer prior to such issuer receiving an internal ESG rating. There are instances where an internal ESG rating may not be available, which include but are not limited to, in-kind transfers, corporate actions, new issues, holdings that are soon to reach their maturity date, and/or certain short-term holdings.

The Investment Adviser in its sole discretion may periodically update its screening process, or revise the thresholds applicable to any such activities. There may be instances where existing issuers in the Portfolio that were not in the lowest category of ESG ratings or otherwise excluded pursuant to the ESG Criteria above at the time of purchase are subsequently determined by the Investment Adviser to either fall into the lowest ESG category or otherwise become eligible for exclusion based on the ESG Criteria above. The Investment Adviser will not be required to sell such securities and may not be able to sell such securities, for example, where they are not readily disposable due to liquidity issues or other reasons.

The Portfolio aims to target a lower exposure, relative to the Reference Portfolio/Benchmark noted below, to companies with certain pre-defined thresholds for diversity on company boards as measured by percentage of women on the company's board of directors. The current pre-defined threshold has been set by the Investment Adviser for the Portfolio to hold less than reference benchmark weight in issuers that have less than 10% women on board (i.e. boards with fewer than 10% of their members being women fall below the threshold), but may be changed at discretion of the Investment Adviser without prior notice to Shareholders (who may obtain details of the current threshold at any point from the Investment Adviser).

The Portfolio aims to target a lower weighted average carbon intensity relative to the Reference Portfolio/Benchmark noted below. Weighted average carbon intensity is a measure of the Scope 1 and 2 carbon emissions of a corporate issuer weighted by average portfolio weight. This measure is calculated by the Investment Adviser, using third party data. Scope 1 emissions include all direct Greenhouse Gas emissions from sources owned or controlled by the company. Scope 2 emissions include indirect GHG emissions from consumption of purchased electricity, heat, or steam, and the transmission and distribution (T&D) losses associated with some purchased utilities. There may be instances where Scope 1 and Scope 2 carbon emissions data may not be available for a particular corporate issuer.

The Investment Adviser will monitor these targets on an ongoing basis and seek to adjust the Portfolio on at least a quarterly basis to adhere to the targets.

Please note that the Reference Portfolio/Benchmark is not an ESG benchmark and that the Portfolio is not managed in view of achieving the long-term global warming objectives of the Paris Agreement. No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Portfolio.

***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

The following indicators are used to measure the attainment of the environmental and/or social characteristics promoted by the Portfolio:

- % of government and corporate issuers in the Portfolio with an ESG rating according to the Investment Adviser's proprietary internal scoring system of less than or equal to 1.
- The difference between the exposure to companies with less than 10% of women on the company's board of directors of the Portfolio and the Reference/Portfolio Benchmark.
- The difference between the weighted average scope 1 and 2 carbon intensity of all the corporate issuers (where available) in the portfolio and weighted average scope 1 and 2 carbon intensity of the Reference Portfolio/Benchmark.

***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

This question is not applicable as the Portfolio does not commit to making sustainable investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

This question is not applicable as the Portfolio does not commit to making sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

***- How have the indicators for adverse impacts on sustainability factors been taken into account?***

Not applicable.

***- How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Not applicable.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

Yes, this Portfolio considers principal adverse impacts on sustainability factors (PAIs) across the environmental and/or social pillars. PAIs are taken into account qualitatively through the application of the binding ESG Criteria outlined above. On a non-binding and materiality basis, PAIs are also considered through firm-wide and investment team specific engagement. Additional information on which PAIs are taken into account are available on our website and will also be available in the Portfolio's annual report pursuant to SFDR Article 11.

☐ No

## What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investments objectives and risk tolerance.

The Investment Adviser implements the ESG Criteria on a binding basis into its investment process, as described above.

In addition to applying the ESG Criteria as set forth above the Investment Adviser may integrate ESG factors with traditional fundamental factors as part of its fundamental research process to seek to: (i) determine whether a particular fixed income security and/or sector is suitable and attractively priced for investment and (ii) assess their potential impact on the credit quality and spreads of a particular fixed income security. Traditional fundamental factors that the Investment Adviser may consider on a non-binding basis include, but are not limited to, leverage, earnings, enterprise value, industry trends and macroeconomic factors. ESG factors that the Investment Adviser may consider include, but are not limited to, carbon intensity and emissions profiles, workplace health and safety and cyber risk, stakeholder relations, employee relations, management incentives, governance structure and practices, environmental issues, physical climate risk exposure, loan servicer governance and controversies and labour practices. The identification of a risk related to an ESG factor will not necessarily exclude a particular fixed income security and/or sector that, in the Investment Adviser's view, is otherwise suitable and attractively priced for investment. The relevance of specific traditional fundamental factors and ESG factors to the fundamental investment process varies across asset classes, sectors and strategies. The Investment Adviser may utilise data sources provided by third party vendors and/or engage directly with issuers when assessing the above factors. The Investment Adviser employs a dynamic fundamental investment process that considers a wide range of factors, and no one factor or consideration is determinative.

The Investment Adviser intends to engage with corporate issuers in this Portfolio that the Investment Adviser believes have an under-representation of women on their board of directors. The threshold for engagement on this topic is currently set at 10% (i.e. boards with fewer than 10% of their members being women fall below the threshold), but may be changed at discretion of the Investment Adviser without prior notice to Shareholders (who may obtain details of the current threshold at any point from the Investment Adviser). The Investment Adviser may invest in a corporate issuer prior to or without engaging with such corporate issuer.

The Investment Adviser intends to engage with corporate and sovereign issuers in this Portfolio that the Investment Adviser believes to have low ESG credentials, with the objective to encourage corporate issuers to improve their ESG practices relative to peers and to encourage sovereigns to improve their overall environmental performance and to encourage enhanced disclosures of climate related metrics. The Investment Adviser may invest in an issuer prior to or without engaging with such issuer.

### ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

- The Portfolio excludes government and corporate issuers that have the lowest category of ESG ratings according to the Investment Adviser's proprietary internal scoring system at the time of purchasing, however, that the Portfolio may account for less than 10% in such issuers.
- The Portfolio aims to target a lower exposure, relative to the Reference Portfolio/Benchmark, to companies with less than 10% of women on the company's board of directors.
- The Portfolio aims to target a lower weighted average carbon intensity relative to the Reference Portfolio/Benchmark.

### ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

Not applicable

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

***What is the policy to assess good governance practices of the investee companies?***

The Portfolio leverages Goldman Sachs Asset Management's proprietary approach to identifying and evaluating global norms violators and issuers that may be engaged in poor governance practices, in particular with respect to sound management structures, employee relations, remuneration of staff and tax compliance.

This proprietary approach seeks to identify, review, evaluate and monitor companies that are flagged by external data providers as being in violation of, or otherwise not aligned with, the United Nation Global Compact (UNGC) principles, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights as well as companies that have received high controversy scores (including significant governance controversies, severe labour rights controversies and severe tax compliance controversies). Following review of these external data inputs, companies that the Investment Adviser believes to have an ongoing and serious violation and/or are considered to not be following good governance practices with insufficient remediation will be excluded from the Portfolio. This list of companies will be reviewed on at least a semi-annual basis. The Investment Adviser may not be able to readily sell securities that are intended for exclusion from the Portfolio based on this review (for example, due to liquidity issues or for other reasons outside of the Investment Manager's control), however, will seek to divest as soon as possible in an orderly manner and in the best interests of Shareholders.

## What is the asset allocation planned for this financial product?

**Asset allocation** describes the share of investments in specific assets.

At least 60% of investments will be aligned to the environmental and/or social characteristics promoted by this Portfolio, as noted above. Up to 40% may be held in cash, derivatives, collateralised securities and issuers for which data is lacking and which fall into the lowest ESG category or otherwise become eligible for exclusion after purchase but cannot be readily disposed of.

**Taxonomy-aligned activities** are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

### ***How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?***

This question is not applicable

## To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Portfolio does not currently commit to invest in any “sustainable investments” within the meaning of the EU Taxonomy and therefore its alignment with the Taxonomy is 0%. However, the position will be kept under review as the underlying rules are finalised and the availability of reliable data increases over time.

### Does the financial product invest in fossil gas and/or Nuclear energy related activities that comply with the EU Taxonomy?

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

\* For the purpose of these graphs, ‘sovereign bonds’ consist of all sovereign exposures

### What is the minimum share of investments in transitional and enabling activities?

As the Portfolio does not commit to invest any “sustainable investment” within the meaning of the EU Taxonomy, the minimum share of investments in transitional and enabling activities within the meaning of the EU Taxonomy is therefore also set at 0%.

<sup>1</sup>Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Portfolio promotes environmental and social characteristics but does not commit to making any sustainable investments. As a consequence, the Portfolio does not commit to a minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

**What is the minimum share of socially sustainable investments?**

This question is not applicable as the Portfolio does not commit to make socially sustainable investments.

**What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?**

Investments included under “#2 Other” include cash for liquidity purposes, derivatives and collateralised securities for efficient portfolio management, and issuers for which data is lacking or which fall into the lowest ESG category or otherwise become eligible for exclusion after purchase but cannot be readily disposed of. These may be used to achieve the investment objective of the Portfolio but neither promote the environmental or social characteristics of the Portfolio, nor qualify as sustainable investments. The percentage shown is expected to be the maximum which may be held in these instruments but the actual percentage may vary from time to time.

These financial instruments are not subject to any minimum environmental or social safeguards.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

Not applicable

**Where can I find more product specific information online?**

More product-specific information can be found on the website:

### Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

| Does this financial product have a sustainable investment objective?                                                                                                                                                                                                                                                                                                              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

## What environmental and/or social characteristics are promoted by this financial product?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The Investment Adviser implements an approach to Environmental, Social and Governance (ESG) considerations into its fundamental investment process as set forth below (the "ESG Criteria"). This consists of: (i) exclusionary screens; (ii) exclusions based on proprietary ESG ratings; (iii) portfolio level targets set forth below.

As part of the ESG investment process, the Investment Adviser will adhere to the ESG Criteria by avoiding investment in debt securities issued by corporate and sovereign issuers that are, in the opinion of the Investment Adviser, directly engaged in, and/or deriving significant revenues from the following activities:

- production of, and/or involvement in controversial weapons (including nuclear weapons);
- extraction and/or production of certain fossil fuels (including thermal coal and oil sands);
- production or sale of tobacco;
- production or sale of civilian firearms

Information on the criteria applied when assessing the aforementioned revenues may be found at the following [link](#).

The Portfolio will also seek to exclude from its investment universe companies the Investment Adviser believes to be violating the United Nations Global Compact's ten principles (which are widely recognised corporate sustainability principles that meet fundamental responsibilities in the areas of human rights, labour, environment and anti-corruption) using the proprietary approach to assess good governance practices described below as well as data provided by third party vendors.

Adherence to these ESG Criteria will be based on thresholds pre-determined by the Investment Adviser in its sole discretion and will be applied to proprietary data and/or data provided by one or more third party vendor(s). The Investment Adviser will rely on third-party data that it believes to be reliable, but it does not guarantee the accuracy of such third-party data. The Investment Adviser, in its sole discretion, retains the right to disapply data provided by third party vendors where it deems the data to be inaccurate or inappropriate. In some cases, data on specific companies may not be available or may be estimated by the Investment Adviser using internal processes or reasonable estimates. Potential omissions from the ESG Criteria may include but are not limited to newly listed companies to which a third party vendor may not yet have data mapped. In the course of gathering data, vendors may make certain value judgements. The Investment Adviser does not verify those judgements, nor quantify their impact upon its analysis. The Investment Adviser in its sole discretion may periodically update its screening process, amend the type of activities that are excluded for investment or revise the thresholds applicable to any such activities.

Additionally, the screening process for the Portfolio generally excludes government and corporate issuers that have the lowest category of ESG ratings according to the Investment Adviser's proprietary internal scoring system. The government and corporate issuers with the lowest ESG ratings according to the Investment Adviser's proprietary internal scoring system generally account for less than 10% of the issuers for which the Investment Adviser has assigned an internal ESG rating. The Portfolio may invest in a government or corporate issuer prior to such issuer receiving an internal ESG rating. There are instances where an internal ESG rating may not be available, which include but are not limited to, in-kind transfers, corporate actions, new issues, holdings that are soon to reach their maturity date, and/or certain short-term holdings.

The Investment Adviser in its sole discretion may periodically update its screening process, or revise the thresholds applicable to any such activities. There may be instances where existing issuers in the Portfolio that were not in the lowest category of ESG ratings or otherwise excluded pursuant to the ESG Criteria above at the time of purchase are subsequently determined by the Investment Adviser to either fall into the lowest ESG category or otherwise become eligible for exclusion based on the ESG Criteria above. The Investment Adviser will not be required to sell such securities and may not be able to sell such securities, for example, where they are not readily disposable due to liquidity issues or other reasons.

The Portfolio aims to target a lower exposure, relative to the Reference Portfolio/Benchmark noted below, to companies with certain pre-defined thresholds for diversity on company boards as measured by percentage of women on the company's board of directors. The current pre-defined threshold has been set by the Investment Adviser for the Portfolio to hold less than reference benchmark weight in issuers that have less than 10% women on board (i.e. boards with fewer than 10% of their members being women fall below the threshold), but may be changed at discretion of the Investment Adviser without prior notice to Shareholders (who may obtain details of the current threshold at any point from the Investment Adviser).

The Portfolio aims to target a lower weighted average carbon intensity relative to the Reference Portfolio/Benchmark noted below. Weighted average carbon intensity is a measure of the Scope 1 and 2 carbon emissions of a corporate issuer weighted by average portfolio weight. This measure is calculated by the Investment Adviser, using third party data. Scope 1 emissions include all direct Greenhouse Gas emissions from sources owned or controlled by the company. Scope 2 emissions include indirect GHG emissions from consumption of purchased electricity, heat, or steam, and the transmission and distribution (T&D) losses associated with some purchased utilities. There may be instances where Scope 1 and Scope 2 carbon emissions data may not be available for a particular corporate issuer.

The Investment Adviser will monitor these targets on an ongoing basis and seek to adjust the Portfolio on at least a quarterly basis to adhere to the targets.

Please note that the Reference Portfolio/Benchmark is not an ESG benchmark and that the Portfolio is not managed in view of achieving the long-term global warming objectives of the Paris Agreement. No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Portfolio.

***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

The following indicators are used to measure the attainment of the environmental and/or social characteristics promoted by the Portfolio:

- % of companies in the Portfolio deriving significant revenues from:
  - production of, and/or involvement in controversial weapons (including nuclear weapons);
  - extraction and/or production of certain fossil fuels (including thermal coal and oil sands);
  - production or sale of tobacco;
  - production or sale of civilian firearms
- % of companies in the Portfolio the Investment Adviser believes to be violating the United Nations Global Compact ten principles.
- % of government and corporate issuers in the Portfolio with an ESG rating according to the Investment Adviser's proprietary internal scoring system of less than or equal to 1.
- The difference between the exposure to companies with less than 10% of women on the company's board of directors of the Portfolio and the Reference/Portfolio Benchmark.
- The difference between the weighted average scope 1 and 2 carbon intensity of all the corporate issuers (where available) in the portfolio and weighted average scope 1 and 2 carbon intensity of the Reference Portfolio/Benchmark.

***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

This question is not applicable as the Portfolio does not commit to making sustainable investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

This question is not applicable as the Portfolio does not commit to making sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

***- How have the indicators for adverse impacts on sustainability factors been taken into account?***

Not applicable.

***- How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Not applicable.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

Yes, this Portfolio considers principal adverse impacts on sustainability factors (PAIs) across the environmental and/or social pillars. PAIs are taken into account qualitatively through the application of the binding ESG Criteria outlined above. On a non-binding and materiality basis, PAIs are also considered through firm-wide and investment team specific engagement. Additional information on which PAIs are taken into account are available on our website and will also be available in the Portfolio's annual report pursuant to SFDR Article 11.

☐ No

## What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investments objectives and risk tolerance.

The Investment Adviser implements the ESG Criteria on a binding basis into its investment process, as described above.

In addition to applying the ESG Criteria as set forth above the Investment Adviser may integrate ESG factors with traditional fundamental factors as part of its fundamental research process to seek to: (i) determine whether a particular fixed income security and/or sector is suitable and attractively priced for investment and (ii) assess their potential impact on the credit quality and spreads of a particular fixed income security. Traditional fundamental factors that the Investment Adviser may consider on a non-binding basis include, but are not limited to, leverage, earnings, enterprise value, industry trends and macroeconomic factors. ESG factors that the Investment Adviser may consider include, but are not limited to, carbon intensity and emissions profiles, workplace health and safety and cyber risk, stakeholder relations, employee relations, management incentives, governance structure and practices, environmental issues, physical climate risk exposure, loan servicer governance and controversies and labour practices. The identification of a risk related to an ESG factor will not necessarily exclude a particular fixed income security and/or sector that, in the Investment Adviser's view, is otherwise suitable and attractively priced for investment. The relevance of specific traditional fundamental factors and ESG factors to the fundamental investment process varies across asset classes, sectors and strategies. The Investment Adviser may utilise data sources provided by third party vendors and/or engage directly with issuers when assessing the above factors. The Investment Adviser employs a dynamic fundamental investment process that considers a wide range of factors, and no one factor or consideration is determinative.

The Investment Adviser intends to engage with corporate issuers in this Portfolio that the Investment Adviser believes have an under-representation of women on their board of directors. The threshold for engagement on this topic is currently set at 10% (i.e. boards with fewer than 10% of their members being women fall below the threshold), but may be changed at discretion of the Investment Adviser without prior notice to Shareholders (who may obtain details of the current threshold at any point from the Investment Adviser). The Investment Adviser may invest in a corporate issuer prior to or without engaging with such corporate issuer.

The Investment Adviser intends to engage with corporate and sovereign issuers in this Portfolio that the Investment Adviser believes to have low ESG credentials, with the objective to encourage corporate issuers to improve their ESG practices relative to peers and to encourage sovereigns to improve their overall environmental performance and to encourage enhanced disclosures of climate related metrics. The Investment Adviser may invest in an issuer prior to or without engaging with such issuer.

### ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

- The Portfolio implements the exclusionary screens as set forth in the ESG Criteria, further described above.
- The Portfolio excludes government and corporate issuers that have the lowest category of ESG ratings according to the Investment Adviser's proprietary internal scoring system at the time of purchasing, however, that the Portfolio may account for less than 10% in such issuers.
- The Portfolio aims to target a lower exposure, relative to the Reference Portfolio/Benchmark, to companies with less than 10% of women on the company's board of directors.
- The Portfolio aims to target a lower weighted average carbon intensity relative to the Reference Portfolio/Benchmark.

***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The ESG Criteria is not designed to reduce investments considered prior to the application of this strategy by a committed minimum amount. The exclusionary screens are intended to ensure that issuers engaged in certain activities are entirely excluded from the Portfolio and is expected to remove between 0-10% of the Reference Portfolio/Benchmark.

***What is the policy to assess good governance practices of the investee companies?***

The Portfolio leverages Goldman Sachs Asset Management's proprietary approach to identifying and evaluating global norms violators and issuers that may be engaged in poor governance practices, in particular with respect to sound management structures, employee relations, remuneration of staff and tax compliance.

This proprietary approach seeks to identify, review, evaluate and monitor companies that are flagged by external data providers as being in violation of, or otherwise not aligned with, the United Nation Global Compact (UNGC) principles, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights as well as companies that have received high controversy scores (including significant governance controversies, severe labour rights controversies and severe tax compliance controversies). Following review of these external data inputs, companies that the Investment Adviser believes to have an ongoing and serious violation and/or are considered to not be following good governance practices with insufficient remediation will be excluded from the Portfolio. This list of companies will be reviewed on at least a semi-annual basis. The Investment Adviser may not be able to readily sell securities that are intended for exclusion from the Portfolio based on this review (for example, due to liquidity issues or for other reasons outside of the Investment Manager's control), however, will seek to divest as soon as possible in an orderly manner and in the best interests of Shareholders.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

## What is the asset allocation planned for this financial product?

**Asset allocation** describes the share of investments in specific assets.

At least 65% of investments will be aligned to the environmental and/or social characteristics promoted by this Portfolio, as noted above. Up to 35% may be held in cash, derivatives, collateralised securities and issuers for which data is lacking and which fall into the lowest ESG category or otherwise become eligible for exclusion after purchase but cannot be readily disposed of.

**Taxonomy-aligned activities** are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

### ***How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?***

This question is not applicable

## To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Portfolio does not currently commit to invest in any “sustainable investments” within the meaning of the EU Taxonomy and therefore its alignment with the Taxonomy is 0%. However, the position will be kept under review as the underlying rules are finalised and the availability of reliable data increases over time.

### Does the financial product invest in fossil gas and/or Nuclear energy related activities that comply with the EU Taxonomy?

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

\* For the purpose of these graphs, ‘sovereign bonds’ consist of all sovereign exposures

### What is the minimum share of investments in transitional and enabling activities?

As the Portfolio does not commit to invest any “sustainable investment” within the meaning of the EU Taxonomy, the minimum share of investments in transitional and enabling activities within the meaning of the EU Taxonomy is therefore also set at 0%.

<sup>1</sup>Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Portfolio promotes environmental and social characteristics but does not commit to making any sustainable investments. As a consequence, the Portfolio does not commit to a minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

**What is the minimum share of socially sustainable investments?**

This question is not applicable as the Portfolio does not commit to make socially sustainable investments.

**What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?**

Investments included under “#2 Other” include cash for liquidity purposes, derivatives and collateralised securities for efficient portfolio management, and issuers for which data is lacking or which fall into the lowest ESG category or otherwise become eligible for exclusion after purchase but cannot be readily disposed of. These may be used to achieve the investment objective of the Portfolio but neither promote the environmental or social characteristics of the Portfolio, nor qualify as sustainable investments. The percentage shown is expected to be the maximum which may be held in these instruments but the actual percentage may vary from time to time.

These financial instruments are not subject to any minimum environmental or social safeguards.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

Not applicable

**Where can I find more product specific information online?**

More product-specific information can be found on the website:

## Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name:  
Goldman Sachs Global Fixed Income Portfolio  
(Hedged)

Legal entity identifier:  
72JOEIAHCH6KABXOF526

### Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

| Does this financial product have a sustainable investment objective?                                                                                                                                                                                                                                                                                                                                                           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <input checked="" type="radio"/> <input type="radio"/> Yes                                                                                                                                                                                                                                                                                                                                                                     | <input type="radio"/> <input checked="" type="radio"/> No                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

## What environmental and/or social characteristics are promoted by this financial product?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The Investment Adviser implements an approach to Environmental, Social and Governance (ESG) considerations into its fundamental investment process as set forth below (the "ESG Criteria"). This consists of: (i) exclusionary screens; (ii) exclusions based on proprietary ESG ratings; (iii) portfolio level targets set forth below.

As part of the ESG investment process, the Investment Adviser will adhere to the ESG Criteria by avoiding investment in debt securities issued by corporate and sovereign issuers that are, in the opinion of the Investment Adviser, directly engaged in, and/or deriving significant revenues from the following activities:

- production of, and/or involvement in controversial weapons (including nuclear weapons);
- extraction and/or production of certain fossil fuels (including thermal coal and oil sands);
- production or sale of tobacco;
- production or sale of civilian firearms

Information on the criteria applied when assessing the aforementioned revenues may be found at the following [link](#).

The Portfolio will also seek to exclude from its investment universe companies the Investment Adviser believes to be violating the United Nations Global Compact's ten principles (which are widely recognised corporate sustainability principles that meet fundamental responsibilities in the areas of human rights, labour, environment and anti-corruption) using the proprietary approach to assess good governance practices described below as well as data provided by third party vendors.

Adherence to these ESG Criteria will be based on thresholds pre-determined by the Investment Adviser in its sole discretion and will be applied to proprietary data and/or data provided by one or more third party vendor(s). The Investment Adviser will rely on third-party data that it believes to be reliable, but it does not guarantee the accuracy of such third-party data. The Investment Adviser, in its sole discretion, retains the right to disapply data provided by third party vendors where it deems the data to be inaccurate or inappropriate. In some cases, data on specific companies may not be available or may be estimated by the Investment Adviser using internal processes or reasonable estimates. Potential omissions from the ESG Criteria may include but are not limited to newly listed companies to which a third party vendor may not yet have data mapped. In the course of gathering data, vendors may make certain value judgements. The Investment Adviser does not verify those judgements, nor quantify their impact upon its analysis. The Investment Adviser in its sole discretion may periodically update its screening process, amend the type of activities that are excluded for investment or revise the thresholds applicable to any such activities.

Additionally, the screening process for the Portfolio generally excludes government and corporate issuers that have the lowest category of ESG ratings according to the Investment Adviser's proprietary internal scoring system. The government and corporate issuers with the lowest ESG ratings according to the Investment Adviser's proprietary internal scoring system generally account for less than 10% of the issuers for which the Investment Adviser has assigned an internal ESG rating. The Portfolio may invest in a government or corporate issuer prior to such issuer receiving an internal ESG rating. There are instances where an internal ESG rating may not be available, which include but are not limited to, in-kind transfers, corporate actions, new issues, holdings that are soon to reach their maturity date, and/or certain short-term holdings.

The Investment Adviser in its sole discretion may periodically update its screening process, or revise the thresholds applicable to any such activities. There may be instances where existing issuers in the Portfolio that were not in the lowest category of ESG ratings or otherwise excluded pursuant to the ESG Criteria above at the time of purchase are subsequently determined by the Investment Adviser to either fall into the lowest ESG category or otherwise become eligible for exclusion based on the ESG Criteria above. The Investment Adviser will not be required to sell such securities and may not be able to sell such securities, for example, where they are not readily disposable due to liquidity issues or other reasons.

The Portfolio aims to target a lower exposure, relative to the Reference Portfolio/Benchmark noted below, to companies with certain pre-defined thresholds for diversity on company boards as measured by percentage of women on the company's board of directors. The current pre-defined threshold has been set by the Investment Adviser for the Portfolio to hold less than reference benchmark weight in issuers that have less than 10% women on board (i.e. boards with fewer than 10% of their members being women fall below the threshold), but may be changed at discretion of the Investment Adviser without prior notice to Shareholders (who may obtain details of the current threshold at any point from the Investment Adviser).

The Portfolio aims to target a lower weighted average carbon intensity relative to the Reference Portfolio/Benchmark noted below. Weighted average carbon intensity is a measure of the Scope 1 and 2 carbon emissions of a corporate issuer weighted by average portfolio weight. This measure is calculated by the Investment Adviser, using third party data. Scope 1 emissions include all direct Greenhouse Gas emissions from sources owned or controlled by the company. Scope 2 emissions include indirect GHG emissions from consumption of purchased electricity, heat, or steam, and the transmission and distribution (T&D) losses associated with some purchased utilities. There may be instances where Scope 1 and Scope 2 carbon emissions data may not be available for a particular corporate issuer.

The Investment Adviser will monitor these targets on an ongoing basis and seek to adjust the Portfolio on at least a quarterly basis to adhere to the targets.

Please note that the Reference Portfolio/Benchmark is not an ESG benchmark and that the Portfolio is not managed in view of achieving the long-term global warming objectives of the Paris Agreement. No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Portfolio.

***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

The following indicators are used to measure the attainment of the environmental and/or social characteristics promoted by the Portfolio:

- % of companies in the Portfolio deriving significant revenues from:
  - production of, and/or involvement in controversial weapons (including nuclear weapons);
  - extraction and/or production of certain fossil fuels (including thermal coal and oil sands);
  - production or sale of tobacco;
  - production or sale of civilian firearms
- % of companies in the Portfolio the Investment Adviser believes to be violating the United Nations Global Compact ten principles.
- % of government and corporate issuers in the Portfolio with an ESG rating according to the Investment Adviser's proprietary internal scoring system of less than or equal to 1.
- The difference between the exposure to companies with less than 10% of women on the company's board of directors of the Portfolio and the Reference/Portfolio Benchmark.
- The difference between the weighted average scope 1 and 2 carbon intensity of all the corporate issuers (where available) in the portfolio and weighted average scope 1 and 2 carbon intensity of the Reference Portfolio/Benchmark.

***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

This question is not applicable as the Portfolio does not commit to making sustainable investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

This question is not applicable as the Portfolio does not commit to making sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

***- How have the indicators for adverse impacts on sustainability factors been taken into account?***

Not applicable.

***- How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Not applicable.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

Yes, this Portfolio considers principal adverse impacts on sustainability factors (PAIs) across the environmental and/or social pillars. PAIs are taken into account qualitatively through the application of the binding ESG Criteria outlined above. On a non-binding and materiality basis, PAIs are also considered through firm-wide and investment team specific engagement. Additional information on which PAIs are taken into account are available on our website and will also be available in the Portfolio's annual report pursuant to SFDR Article 11.

☐ No

## What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investments objectives and risk tolerance.

The Investment Adviser implements the ESG Criteria on a binding basis into its investment process, as described above.

In addition to applying the ESG Criteria as set forth above the Investment Adviser may integrate ESG factors with traditional fundamental factors as part of its fundamental research process to seek to: (i) determine whether a particular fixed income security and/or sector is suitable and attractively priced for investment and (ii) assess their potential impact on the credit quality and spreads of a particular fixed income security. Traditional fundamental factors that the Investment Adviser may consider on a non-binding basis include, but are not limited to, leverage, earnings, enterprise value, industry trends and macroeconomic factors. ESG factors that the Investment Adviser may consider include, but are not limited to, carbon intensity and emissions profiles, workplace health and safety and cyber risk, stakeholder relations, employee relations, management incentives, governance structure and practices, environmental issues, physical climate risk exposure, loan servicer governance and controversies and labour practices. The identification of a risk related to an ESG factor will not necessarily exclude a particular fixed income security and/or sector that, in the Investment Adviser's view, is otherwise suitable and attractively priced for investment. The relevance of specific traditional fundamental factors and ESG factors to the fundamental investment process varies across asset classes, sectors and strategies. The Investment Adviser may utilise data sources provided by third party vendors and/or engage directly with issuers when assessing the above factors. The Investment Adviser employs a dynamic fundamental investment process that considers a wide range of factors, and no one factor or consideration is determinative.

The Investment Adviser intends to engage with corporate issuers in this Portfolio that the Investment Adviser believes have an under-representation of women on their board of directors. The threshold for engagement on this topic is currently set at 10% (i.e. boards with fewer than 10% of their members being women fall below the threshold), but may be changed at discretion of the Investment Adviser without prior notice to Shareholders (who may obtain details of the current threshold at any point from the Investment Adviser). The Investment Adviser may invest in a corporate issuer prior to or without engaging with such corporate issuer.

The Investment Adviser intends to engage with corporate and sovereign issuers in this Portfolio that the Investment Adviser believes to have low ESG credentials, with the objective to encourage corporate issuers to improve their ESG practices relative to peers and to encourage sovereigns to improve their overall environmental performance and to encourage enhanced disclosures of climate related metrics. The Investment Adviser may invest in an issuer prior to or without engaging with such issuer.

### ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

- The Portfolio implements the exclusionary screens as set forth in the ESG Criteria, further described above.
- The Portfolio excludes government and corporate issuers that have the lowest category of ESG ratings according to the Investment Adviser's proprietary internal scoring system at the time of purchasing, however, that the Portfolio may account for less than 10% in such issuers.
- The Portfolio aims to target a lower exposure, relative to the Reference Portfolio/Benchmark, to companies with less than 10% of women on the company's board of directors.
- The Portfolio aims to target a lower weighted average carbon intensity relative to the Reference Portfolio/Benchmark.

***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The ESG Criteria is not designed to reduce investments considered prior to the application of this strategy by a committed minimum amount. The exclusionary screens are intended to ensure that issuers engaged in certain activities are entirely excluded from the Portfolio and is expected to remove between 0-10% of the Reference Portfolio/Benchmark.

***What is the policy to assess good governance practices of the investee companies?***

The Portfolio leverages Goldman Sachs Asset Management's proprietary approach to identifying and evaluating global norms violators and issuers that may be engaged in poor governance practices, in particular with respect to sound management structures, employee relations, remuneration of staff and tax compliance.

This proprietary approach seeks to identify, review, evaluate and monitor companies that are flagged by external data providers as being in violation of, or otherwise not aligned with, the United Nation Global Compact (UNGC) principles, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights as well as companies that have received high controversy scores (including significant governance controversies, severe labour rights controversies and severe tax compliance controversies). Following review of these external data inputs, companies that the Investment Adviser believes to have an ongoing and serious violation and/or are considered to not be following good governance practices with insufficient remediation will be excluded from the Portfolio. This list of companies will be reviewed on at least a semi-annual basis. The Investment Adviser may not be able to readily sell securities that are intended for exclusion from the Portfolio based on this review (for example, due to liquidity issues or for other reasons outside of the Investment Manager's control), however, will seek to divest as soon as possible in an orderly manner and in the best interests of Shareholders.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

## What is the asset allocation planned for this financial product?

**Asset allocation** describes the share of investments in specific assets.

At least 65% of investments will be aligned to the environmental and/or social characteristics promoted by this Portfolio, as noted above. Up to 35% may be held in cash, derivatives, collateralised securities and issuers for which data is lacking and which fall into the lowest ESG category or otherwise become eligible for exclusion after purchase but cannot be readily disposed of.

**Taxonomy-aligned activities** are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

### ***How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?***

This question is not applicable

## To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Portfolio does not currently commit to invest in any “sustainable investments” within the meaning of the EU Taxonomy and therefore its alignment with the Taxonomy is 0%. However, the position will be kept under review as the underlying rules are finalised and the availability of reliable data increases over time.

### Does the financial product invest in fossil gas and/or Nuclear energy related activities that comply with the EU Taxonomy?

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

### What is the minimum share of investments in transitional and enabling activities?

As the Portfolio does not commit to invest any “sustainable investment” within the meaning of the EU Taxonomy, the minimum share of investments in transitional and enabling activities within the meaning of the EU Taxonomy is therefore also set at 0%.

<sup>1</sup>Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Portfolio promotes environmental and social characteristics but does not commit to making any sustainable investments. As a consequence, the Portfolio does not commit to a minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

**What is the minimum share of socially sustainable investments?**

This question is not applicable as the Portfolio does not commit to make socially sustainable investments.

**What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?**

Investments included under “#2 Other” include cash for liquidity purposes, derivatives and collateralised securities for efficient portfolio management, and issuers for which data is lacking or which fall into the lowest ESG category or otherwise become eligible for exclusion after purchase but cannot be readily disposed of. These may be used to achieve the investment objective of the Portfolio but neither promote the environmental or social characteristics of the Portfolio, nor qualify as sustainable investments. The percentage shown is expected to be the maximum which may be held in these instruments but the actual percentage may vary from time to time.

These financial instruments are not subject to any minimum environmental or social safeguards.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

Not applicable

### Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

| Does this financial product have a sustainable investment objective?                                                                                                                                                                                                                                                                                                              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

## What environmental and/or social characteristics are promoted by this financial product?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The Investment Adviser implements an approach to Environmental, Social and Governance (ESG) considerations into its fundamental investment process as set forth below (the "ESG Criteria"). This consists of: (i) exclusions based on proprietary ESG ratings; (ii) portfolio level targets as set forth below.

The screening process for the Portfolio generally excludes government and corporate issuers that have the lowest two categories of ESG ratings according to the Investment Adviser's proprietary internal scoring system provided, however, that the Portfolio may have exposure of up to 30% in such government and corporate issuers. The Portfolio may invest in a government or corporate issuer prior to such issuer receiving an internal ESG rating. There are instances where an internal ESG rating may not be available, which include but are not limited to, in-kind transfers, corporate actions, new issues, holdings that are soon to reach their maturity date, and/or certain short-term holdings.

The Investment Adviser in its sole discretion may periodically update its screening process, or revise the thresholds applicable to any such activities. There may be instances where existing issuers in the Portfolio that were not in the lowest category of ESG ratings or otherwise excluded pursuant to the ESG Criteria above at the time of purchase are subsequently determined by the Investment Adviser to either fall into the lowest ESG category or otherwise become eligible for exclusion based on the ESG Criteria above. The Investment Adviser will not be required to sell such securities and may not be able to sell such securities, for example, where they are not readily disposable due to liquidity issues or other reasons.

The Portfolio aims to target a lower exposure, relative to the Reference Portfolio/Benchmark noted below, to companies with certain pre-defined thresholds for diversity on company boards as measured by percentage of women on the company's board of directors. The current pre-defined threshold has been set by the Investment Adviser for the Portfolio to hold less than reference benchmark weight in issuers that have less than 10% women on board (i.e. boards with fewer than 10% of their members being women fall below the threshold), but may be changed at discretion of the Investment Adviser without prior notice to Shareholders (who may obtain details of the current threshold at any point from the Investment Adviser).

The Portfolio aims to target a lower weighted average carbon intensity relative to the Reference Portfolio/Benchmark noted below. Weighted average carbon intensity is a measure of the Scope 1 and 2 carbon emissions of a corporate issuer weighted by average portfolio weight. This measure is calculated by the Investment Adviser, using third party data. Scope 1 emissions include all direct Greenhouse Gas emissions from sources owned or controlled by the company. Scope 2 emissions include indirect GHG emissions from consumption of purchased electricity, heat, or steam, and the transmission and distribution (T&D) losses associated with some purchased utilities. There may be instances where Scope 1 and Scope 2 carbon emissions data may not be available for a particular corporate issuer.

The Investment Adviser will monitor these targets on an ongoing basis and seek to adjust the Portfolio on at least a quarterly basis to adhere to the targets.

Please note that the Reference Portfolio/Benchmark is not an ESG benchmark and that the Portfolio is not managed in view of achieving the long-term global warming objectives of the Paris Agreement.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Portfolio.

***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

The following indicators are used to measure the attainment of the environmental and/or social characteristics promoted by the Portfolio:

- % of corporate and sovereigns in the Portfolio with an ESG rating according to the Investment Adviser's proprietary internal scoring system of less than or equal to 2.
- The difference between the exposure to companies with less than 10% of women on the company's board of directors of the Portfolio and the Reference/Portfolio Benchmark.
- The difference between the weighted average scope 1 and 2 carbon intensity of all the corporate issuers (where available) in the portfolio and weighted average scope 1 and 2 carbon intensity of the Reference Portfolio/Benchmark.

***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

This question is not applicable as the Portfolio does not commit to making sustainable investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

This question is not applicable as the Portfolio does not commit to making sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

***- How have the indicators for adverse impacts on sustainability factors been taken into account?***

Not applicable.

***- How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Not applicable.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

Yes, this Portfolio considers principal adverse impacts on sustainability factors (PAIs) across the environmental and/or social pillars. PAIs are taken into account qualitatively through the application of the binding ESG Criteria outlined above. On a non-binding and materiality basis, PAIs are also considered through firm-wide and investment team specific engagement. Additional information on which PAIs are taken into account are available on our website and will also be available in the Portfolio's annual report pursuant to SFDR Article 11.

☐ No

## What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investments objectives and risk tolerance.

The Investment Adviser implements the ESG Criteria on a binding basis into its investment process, as described above.

In addition to applying the ESG Criteria as set forth above the Investment Adviser may integrate ESG factors with traditional fundamental factors as part of its fundamental research process to seek to: (i) determine whether a particular fixed income security and/or sector is suitable and attractively priced for investment and (ii) assess their potential impact on the credit quality and spreads of a particular fixed income security. Traditional fundamental factors that the Investment Adviser may consider on a non-binding basis include, but are not limited to, leverage, earnings, enterprise value, industry trends and macroeconomic factors. ESG factors that the Investment Adviser may consider include, but are not limited to, carbon intensity and emissions profiles, workplace health and safety and cyber risk, stakeholder relations, employee relations, management incentives, governance structure and practices, environmental issues, physical climate risk exposure, loan servicer governance and controversies and labour practices. The identification of a risk related to an ESG factor will not necessarily exclude a particular fixed income security and/or sector that, in the Investment Adviser's view, is otherwise suitable and attractively priced for investment. The relevance of specific traditional fundamental factors and ESG factors to the fundamental investment process varies across asset classes, sectors and strategies. The Investment Adviser may utilise data sources provided by third party vendors and/or engage directly with issuers when assessing the above factors. The Investment Adviser employs a dynamic fundamental investment process that considers a wide range of factors, and no one factor or consideration is determinative.

The Investment Adviser intends to engage with corporate issuers in this Portfolio that the Investment Adviser believes have an under-representation of women on their board of directors. The threshold for engagement on this topic is currently set at 10% (i.e. boards with fewer than 10% of their members being women fall below the threshold), but may be changed at discretion of the Investment Adviser without prior notice to Shareholders (who may obtain details of the current threshold at any point from the Investment Adviser). The Investment Adviser may invest in a corporate issuer prior to or without engaging with such corporate issuer.

The Investment Adviser intends to engage with corporate issuers in this Portfolio that the Investment Adviser believes to have low ESG credentials, with the objective to encourage issuers to improve their ESG practices relative to peers. The Investment Adviser may invest in a corporate issuer prior to or without engaging with such corporate issuer.

## ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

- The Portfolio excludes government and corporate issuers that have the lowest two categories of ESG ratings according to the Investment Adviser's proprietary internal scoring system at the time of purchasing, however, that the Portfolio may have exposure of up to 30% in such issuers.
- The Portfolio aims to target a lower exposure, relative to the Reference Portfolio/Benchmark, to companies with less than 10% of women on the company's board of directors.
- The Portfolio aims to target a lower weighted average carbon intensity relative to the Reference Portfolio/Benchmark.

## ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

Not applicable

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

***What is the policy to assess good governance practices of the investee companies?***

The Portfolio leverages Goldman Sachs Asset Management's proprietary approach to identifying and evaluating global norms violators and issuers that may be engaged in poor governance practices, in particular with respect to sound management structures, employee relations, remuneration of staff and tax compliance.

This proprietary approach seeks to identify, review, evaluate and monitor companies that are flagged by external data providers as being in violation of, or otherwise not aligned with, the United Nation Global Compact (UNGC) principles, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights as well as companies that have received high controversy scores (including significant governance controversies, severe labour rights controversies and severe tax compliance controversies). Following review of these external data inputs, companies that the Investment Adviser believes to have an ongoing and serious violation and/or are considered to not be following good governance practices with insufficient remediation will be excluded from the Portfolio. This list of companies will be reviewed on at least a semi-annual basis. The Investment Adviser may not be able to readily sell securities that are intended for exclusion from the Portfolio based on this review (for example, due to liquidity issues or for other reasons outside of the Investment Manager's control), however, will seek to divest as soon as possible in an orderly manner and in the best interests of Shareholders.

## What is the asset allocation planned for this financial product?

**Asset allocation** describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

At least 80% of investments will be aligned to the environmental and/or social characteristics promoted by this Portfolio, as noted above. Up to 20% may be held in cash, mutual funds, ETFs and derivatives and issuers which fall into the lowest ESG category or otherwise become eligible for exclusion after purchase but cannot be readily disposed of.

**How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

This question is not applicable

## To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Portfolio does not currently commit to invest in any “sustainable investments” within the meaning of the EU Taxonomy and therefore its alignment with the Taxonomy is 0%. However, the position will be kept under review as the underlying rules are finalised and the availability of reliable data increases over time.

### Does the financial product invest in fossil gas and/or Nuclear energy related activities that comply with the EU Taxonomy?

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

### What is the minimum share of investments in transitional and enabling activities?

As the Portfolio does not commit to invest any “sustainable investment” within the meaning of the EU Taxonomy, the minimum share of investments in transitional and enabling activities within the meaning of the EU Taxonomy is therefore also set at 0%.

<sup>1</sup>Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Portfolio promotes environmental and social characteristics but does not commit to making any sustainable investments. As a consequence, the Portfolio does not commit to a minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

**What is the minimum share of socially sustainable investments?**

This question is not applicable as the Portfolio does not commit to make socially sustainable investments.

**What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?**

Investments included under “#2 Other” include cash, mutual funds and ETFs for liquidity purposes, derivatives for efficient portfolio management and issuers for which data is lacking or which fall into the lowest ESG category or otherwise become eligible for exclusion after purchase but cannot be readily disposed of. These may be used to achieve the investment objective of the Portfolio but neither promote the environmental or social characteristics of the Portfolio, nor qualify as sustainable investments. The percentage shown is expected to be the maximum which may be held in these instruments but the actual percentage may vary from time to time.

These financial instruments are not subject to any minimum environmental or social safeguards.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

Not applicable

### Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

| Does this financial product have a sustainable investment objective?                                                                                                                                                                                                                                                                                                              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

## What environmental and/or social characteristics are promoted by this financial product?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The Investment Adviser implements an approach to Environmental, Social and Governance (ESG) considerations into its fundamental investment process as set forth below (the "ESG Criteria"). This consists of: (i) exclusionary screens; (ii) exclusions based on proprietary ESG ratings as set forth below.

As part of the ESG investment process, the Investment Adviser will adhere to the ESG Criteria by avoiding investment in debt securities issued by corporate and sovereign issuers that are, in the opinion of the Investment Adviser, directly engaged in, and/or deriving significant revenues from the following activities:

- production of, and/or involvement in controversial weapons (including nuclear weapons);
- extraction and/or production of certain fossil fuels (including thermal coal and oil sands);
- production or sale of tobacco;
- production or sale of civilian firearms

Information on the criteria applied when assessing the aforementioned revenues may be found at the following [link](#).

The Portfolio will also seek to exclude from its investment universe companies the Investment Adviser believes to be violating the United Nations Global Compact's ten principles (which are widely recognised corporate sustainability principles that meet fundamental responsibilities in the areas of human rights, labour, environment and anti-corruption) using the proprietary approach to assess good governance practices described below as well as data provided by third party vendors.

Adherence to these ESG Criteria will be based on thresholds pre-determined by the Investment Adviser in its sole discretion and will be applied to proprietary data and/or data provided by one or more third party vendor(s). The Investment Adviser will rely on third-party data that it believes to be reliable, but it does not guarantee the accuracy of such third-party data. The Investment Adviser, in its sole discretion, retains the right to disapply data provided by third party vendors where it deems the data to be inaccurate or inappropriate. In some cases, data on specific companies may not be available or may be estimated by the Investment Adviser using internal processes or reasonable estimates. Potential omissions from the ESG Criteria may include but are not limited to newly listed companies to which a third party vendor may not yet have data mapped. In the course of gathering data, vendors may make certain value judgements. The Investment Adviser does not verify those judgements, nor quantify their impact upon its analysis. The Investment Adviser in its sole discretion may periodically update its screening process, amend the type of activities that are excluded for investment or revise the thresholds applicable to any such activities.

Additionally, the screening process for the Portfolio generally excludes government and corporate issuers that have the lowest category of ESG ratings according to the Investment Adviser's proprietary internal scoring system. The government and corporate issuers with the lowest ESG ratings according to the Investment Adviser's proprietary internal scoring system generally account for less than 10% of the issuers for which the Investment Adviser has assigned an internal ESG rating. The Portfolio may invest in a government or corporate issuer prior to such issuer receiving an internal ESG rating. There are instances where an internal ESG rating may not be available, which include but are not limited to, in-kind transfers, corporate actions, new issues, holdings that are soon to reach their maturity date, and/or certain short-term holdings.

The Investment Adviser in its sole discretion may periodically update its screening process, or revise the thresholds applicable to any such activities. There may be instances where existing issuers in the Portfolio that were not in the lowest category of ESG ratings or otherwise excluded pursuant to the ESG Criteria above at the time of purchase are subsequently determined by the Investment Adviser to either fall into the lowest ESG category or otherwise become eligible for exclusion based on the ESG Criteria above. The Investment Adviser will not be required to sell such securities and may not be able to sell such securities, for example, where they are not readily disposable due to liquidity issues or other reasons.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Portfolio.

***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

The following indicators are used to measure the attainment of the environmental and/or social characteristics promoted by the Portfolio:

- % of companies in the Portfolio deriving significant revenues from:
  - production of, and/or involvement in controversial weapons (including nuclear weapons);
  - extraction and/or production of certain fossil fuels (including thermal coal and oil sands);
  - production or sale of tobacco;
  - production or sale of civilian firearms
- % of companies in the Portfolio the Investment Adviser believes to be violating the United Nations Global Compact ten principles.
- % of government and corporate issuers in the Portfolio with an ESG rating according to the Investment Adviser's proprietary internal scoring system of less than or equal to 1.

***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

This question is not applicable as the Portfolio does not commit to making sustainable investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

This question is not applicable as the Portfolio does not commit to making sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

***- How have the indicators for adverse impacts on sustainability factors been taken into account?***

Not applicable.

***- How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Not applicable.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

Yes, this Portfolio considers principal adverse impacts on sustainability factors (PAIs) across the environmental and/or social pillars. PAIs are taken into account qualitatively through the application of the binding ESG Criteria outlined above. On a non-binding and materiality basis, PAIs are also considered through firm-wide and investment team specific engagement. Additional information on which PAIs are taken into account are available on our website and will also be available in the Portfolio's annual report pursuant to SFDR Article 11.

☐ No

## What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investments objectives and risk tolerance.

The Investment Adviser implements the ESG Criteria on a binding basis into its investment process, as described above.

In addition to applying the ESG Criteria as set forth above the Investment Adviser may integrate ESG factors with traditional fundamental factors as part of its fundamental research process to seek to: (i) determine whether a particular fixed income security and/or sector is suitable and attractively priced for investment and (ii) assess their potential impact on the credit quality and spreads of a particular fixed income security. Traditional fundamental factors that the Investment Adviser may consider on a non-binding basis include, but are not limited to, leverage, earnings, enterprise value, industry trends and macroeconomic factors. ESG factors that the Investment Adviser may consider include, but are not limited to, carbon intensity and emissions profiles, workplace health and safety and cyber risk, stakeholder relations, employee relations, management incentives, governance structure and practices, environmental issues, physical climate risk exposure, loan servicer governance and controversies and labour practices. The identification of a risk related to an ESG factor will not necessarily exclude a particular fixed income security and/or sector that, in the Investment Adviser's view, is otherwise suitable and attractively priced for investment. The relevance of specific traditional fundamental factors and ESG factors to the fundamental investment process varies across asset classes, sectors and strategies. The Investment Adviser may utilise data sources provided by third party vendors and/or engage directly with issuers when assessing the above factors. The Investment Adviser employs a dynamic fundamental investment process that considers a wide range of factors, and no one factor or consideration is determinative.

The Investment Adviser intends to engage with corporate issuers in this Portfolio that the Investment Adviser believes have an under-representation of women on their board of directors. The threshold for engagement on this topic is currently set at 10% (i.e. boards with fewer than 10% of their members being women fall below the threshold), but may be changed at discretion of the Investment Adviser without prior notice to Shareholders (who may obtain details of the current threshold at any point from the Investment Adviser). The Investment Adviser may invest in a corporate issuer prior to or without engaging with such corporate issuer.

The Investment Adviser intends to engage with corporate issuers in this Portfolio that the Investment Adviser believes to have low ESG credentials, with the objective to encourage issuers to improve their ESG practices relative to peers. The Investment Adviser may invest in a corporate issuer prior to or without engaging with such corporate issuer.

## ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

- The Portfolio implements the exclusionary screens as set forth in the ESG Criteria, further described above.
- The Portfolio excludes government and corporate issuers that have the lowest category of ESG ratings according to the Investment Adviser's proprietary internal scoring system at the time of purchasing, however, that the Portfolio may account for less than 10% in such issuers.

## ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The ESG Criteria is not designed to reduce investments considered prior to the application of this strategy by a committed minimum amount. The exclusionary screens are intended to ensure that issuers engaged in certain activities are entirely excluded from the Portfolio and is expected to remove between 0-10% of the Reference Portfolio/Benchmark.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

***What is the policy to assess good governance practices of the investee companies?***

The Portfolio leverages Goldman Sachs Asset Management's proprietary approach to identifying and evaluating global norms violators and issuers that may be engaged in poor governance practices, in particular with respect to sound management structures, employee relations, remuneration of staff and tax compliance.

This proprietary approach seeks to identify, review, evaluate and monitor companies that are flagged by external data providers as being in violation of, or otherwise not aligned with, the United Nation Global Compact (UNGC) principles, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights as well as companies that have received high controversy scores (including significant governance controversies, severe labour rights controversies and severe tax compliance controversies). Following review of these external data inputs, companies that the Investment Adviser believes to have an ongoing and serious violation and/or are considered to not be following good governance practices with insufficient remediation will be excluded from the Portfolio. This list of companies will be reviewed on at least a semi-annual basis. The Investment Adviser may not be able to readily sell securities that are intended for exclusion from the Portfolio based on this review (for example, due to liquidity issues or for other reasons outside of the Investment Manager's control), however, will seek to divest as soon as possible in an orderly manner and in the best interests of Shareholders.

## What is the asset allocation planned for this financial product?

**Asset allocation** describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

At least 80% of investments will be aligned to the environmental and/or social characteristics promoted by this Portfolio, as noted above. Up to 20% may be held in cash, derivatives and issuers for which data is lacking and issuers which fall into the lowest ESG category or otherwise become eligible for exclusion after purchase but cannot be readily disposed of.

**How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

This question is not applicable

## To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Portfolio does not currently commit to invest in any “sustainable investments” within the meaning of the EU Taxonomy and therefore its alignment with the Taxonomy is 0%. However, the position will be kept under review as the underlying rules are finalised and the availability of reliable data increases over time.

## Does the financial product invest in fossil gas and/or Nuclear energy related activities that comply with the EU Taxonomy?

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

## What is the minimum share of investments in transitional and enabling activities?

As the Portfolio does not commit to invest any “sustainable investment” within the meaning of the EU Taxonomy, the minimum share of investments in transitional and enabling activities within the meaning of the EU Taxonomy is therefore also set at 0%.

<sup>1</sup>Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Portfolio promotes environmental and social characteristics but does not commit to making any sustainable investments. As a consequence, the Portfolio does not commit to a minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

**What is the minimum share of socially sustainable investments?**

This question is not applicable as the Portfolio does not commit to make socially sustainable investments.

**What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?**

Investments included under “#2 Other” include cash for liquidity purposes, derivatives for efficient portfolio management and issuers for which data is lacking or which fall into the lowest ESG category or otherwise become eligible for exclusion after purchase but cannot be readily disposed of. These may be used to achieve the investment objective of the Portfolio but neither promote the environmental or social characteristics of the Portfolio, nor qualify as sustainable investments. The percentage shown is expected to be the maximum which may be held in these instruments but the actual percentage may vary from time to time.

These financial instruments are not subject to any minimum environmental or social safeguards.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

Not applicable

**Where can I find more product specific information online?**

### Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

| Does this financial product have a sustainable investment objective?                                                                                                                                                                                                                                                                                                              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

## What environmental and/or social characteristics are promoted by this financial product?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The Investment Adviser implements an approach to Environmental, Social and Governance (ESG) considerations into its fundamental investment process as set forth below (the "ESG Criteria"). This consists of: (i) exclusionary screens; (ii) exclusions based on proprietary ESG ratings; (iii) portfolio level targets set forth below.

As part of the ESG investment process, the Investment Adviser will adhere to the ESG Criteria by avoiding investment in debt securities issued by corporate and sovereign issuers that are, in the opinion of the Investment Adviser, directly engaged in, and/or deriving significant revenues from the following activities:

- production of, and/or involvement in controversial weapons (including nuclear weapons);
- extraction and/or production of certain fossil fuels (including thermal coal and oil sands);
- production or sale of tobacco;
- production or sale of civilian firearms

Information on the criteria applied when assessing the aforementioned revenues may be found at the following [link](#).

The Portfolio will also seek to exclude from its investment universe companies the Investment Adviser believes to be violating the United Nations Global Compact's ten principles (which are widely recognised corporate sustainability principles that meet fundamental responsibilities in the areas of human rights, labour, environment and anti-corruption) using the proprietary approach to assess good governance practices described below as well as data provided by third party vendors.

Adherence to these ESG Criteria will be based on thresholds pre-determined by the Investment Adviser in its sole discretion and will be applied to proprietary data and/or data provided by one or more third party vendor(s). The Investment Adviser will rely on third-party data that it believes to be reliable, but it does not guarantee the accuracy of such third-party data. The Investment Adviser, in its sole discretion, retains the right to disapply data provided by third party vendors where it deems the data to be inaccurate or inappropriate. In some cases, data on specific companies may not be available or may be estimated by the Investment Adviser using internal processes or reasonable estimates. Potential omissions from the ESG Criteria may include but are not limited to newly listed companies to which a third party vendor may not yet have data mapped. In the course of gathering data, vendors may make certain value judgements. The Investment Adviser does not verify those judgements, nor quantify their impact upon its analysis. The Investment Adviser in its sole discretion may periodically update its screening process, amend the type of activities that are excluded for investment or revise the thresholds applicable to any such activities.

Additionally, the screening process for the Portfolio generally excludes government and corporate issuers that have the lowest category of ESG ratings according to the Investment Adviser's proprietary internal scoring system provided, however, that the Portfolio may have exposure of up to 10% in such issuers. The Portfolio may invest in a government or corporate issuer prior to such issuer receiving an internal ESG rating. There are instances where an internal ESG rating may not be available, which include but are not limited to, in-kind transfers, corporate actions, new issues, holdings that are soon to reach their maturity date, and/or certain short-term holdings.

The Investment Adviser in its sole discretion may periodically update its screening process, or revise the thresholds applicable to any such activities. There may be instances where existing issuers in the Portfolio that were not in the lowest category of ESG ratings or otherwise excluded pursuant to the ESG Criteria above at the time of purchase are subsequently determined by the Investment Adviser to either fall into the lowest ESG category or otherwise become eligible for exclusion based on the ESG Criteria above. The Investment Adviser will not be required to sell such securities and may not be able to sell such securities, for example, where they are not readily disposable due to liquidity issues or other reasons.

The Portfolio aims to target a lower exposure, relative to the Reference Portfolio/Benchmark noted

below, to companies with certain pre-defined thresholds for diversity on company boards as measured by percentage of women on the company's board of directors. The current pre-defined threshold has been set by the Investment Adviser for the Portfolio to hold less than reference benchmark weight in issuers that have less than 10% women on board (i.e. boards with fewer than 10% of their members being women fall below the threshold), but may be changed at discretion of the Investment Adviser without prior notice to Shareholders (who may obtain details of the current threshold at any point from the Investment Adviser).

The Portfolio aims to target a lower weighted average carbon intensity relative to the Reference Portfolio/Benchmark noted below. Weighted average carbon intensity is a measure of the Scope 1 and 2 carbon emissions of a corporate issuer weighted by average portfolio weight. This measure is calculated by the Investment Adviser, using third party data. Scope 1 emissions include all direct Greenhouse Gas emissions from sources owned or controlled by the company. Scope 2 emissions include indirect GHG emissions from consumption of purchased electricity, heat, or steam, and the transmission and distribution (T&D) losses associated with some purchased utilities. There may be instances where Scope 1 and Scope 2 carbon emissions data may not be available for a particular corporate issuer.

The Investment Adviser will monitor these targets on an ongoing basis and seek to adjust the Portfolio on at least a quarterly basis to adhere to the targets.

Please note that the Reference Portfolio/Benchmark is not an ESG benchmark and that the Portfolio is not managed in view of achieving the long-term global warming objectives of the Paris Agreement.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Portfolio.

***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

The following indicators are used to measure the attainment of the environmental and/or social characteristics promoted by the Portfolio:

- % of companies in the Portfolio deriving significant revenues from:
  - production of, and/or involvement in controversial weapons (including nuclear weapons);
  - extraction and/or production of certain fossil fuels (including thermal coal and oil sands);
  - production or sale of tobacco;
  - production or sale of civilian firearms
- % of companies in the Portfolio the Investment Adviser believes to be violating the United Nations Global Compact ten principles.
- % of government and corporate issuers in the Portfolio with an ESG rating according to the Investment Adviser's proprietary internal scoring system of less than or equal to 1.
- The difference between the exposure to companies with less than 10% of women on the company's board of directors of the Portfolio and the Reference/Portfolio Benchmark.
- The difference between the weighted average scope 1 and 2 carbon intensity of all the corporate issuers (where available) in the portfolio and weighted average scope 1 and 2 carbon intensity of the Reference Portfolio/Benchmark.

***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

This question is not applicable as the Portfolio does not commit to making sustainable investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

This question is not applicable as the Portfolio does not commit to making sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

***- How have the indicators for adverse impacts on sustainability factors been taken into account?***

Not applicable.

***- How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Not applicable.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

Yes, this Portfolio considers principal adverse impacts on sustainability factors (PAIs) across the environmental and/or social pillars. PAIs are taken into account qualitatively through the application of the binding ESG Criteria outlined above. On a non-binding and materiality basis, PAIs are also considered through firm-wide and investment team specific engagement. Additional information on which PAIs are taken into account are available on our website and will also be available in the Portfolio's annual report pursuant to SFDR Article 11.

☐ No

## What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investments objectives and risk tolerance.

The Investment Adviser implements the ESG Criteria on a binding basis into its investment process, as described above.

In addition to applying the ESG Criteria as set forth above the Investment Adviser may integrate ESG factors with traditional fundamental factors as part of its fundamental research process to seek to: (i) determine whether a particular fixed income security and/or sector is suitable and attractively priced for investment and (ii) assess their potential impact on the credit quality and spreads of a particular fixed income security. Traditional fundamental factors that the Investment Adviser may consider on a non-binding basis include, but are not limited to, leverage, earnings, enterprise value, industry trends and macroeconomic factors. ESG factors that the Investment Adviser may consider include, but are not limited to, carbon intensity and emissions profiles, workplace health and safety and cyber risk, stakeholder relations, employee relations, management incentives, governance structure and practices, environmental issues, physical climate risk exposure, loan servicer governance and controversies and labour practices. The identification of a risk related to an ESG factor will not necessarily exclude a particular fixed income security and/or sector that, in the Investment Adviser's view, is otherwise suitable and attractively priced for investment. The relevance of specific traditional fundamental factors and ESG factors to the fundamental investment process varies across asset classes, sectors and strategies. The Investment Adviser may utilise data sources provided by third party vendors and/or engage directly with issuers when assessing the above factors. The Investment Adviser employs a dynamic fundamental investment process that considers a wide range of factors, and no one factor or consideration is determinative.

The Investment Adviser intends to engage with corporate issuers in this Portfolio that the Investment Adviser believes have an under-representation of women on their board of directors. The threshold for engagement on this topic is currently set at 10% (i.e. boards with fewer than 10% of their members being women fall below the threshold), but may be changed at discretion of the Investment Adviser without prior notice to Shareholders (who may obtain details of the current threshold at any point from the Investment Adviser). The Investment Adviser may invest in a corporate issuer prior to or without engaging with such corporate issuer.

The Investment Adviser intends to engage with corporate and sovereign issuers in this Portfolio that the Investment Adviser believes to have low ESG credentials, with the objective to encourage corporate issuers to improve their ESG practices relative to peers and to encourage sovereigns to improve their overall environmental performance and to encourage enhanced disclosures of climate related metrics. The Investment Adviser may invest in an issuer prior to or without engaging with such issuer.

### ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

- The Portfolio implements the exclusionary screens as set forth in the ESG Criteria, further described above.
- The Portfolio excludes government and corporate issuers that have the lowest category of ESG ratings according to the Investment Adviser's proprietary internal scoring system at the time of purchasing, however, that the Portfolio may have exposure of up to 10% in such issuers.
- The Portfolio aims to target a lower exposure, relative to the Reference Portfolio/Benchmark, to companies with less than 10% of women on the company's board of directors.
- The Portfolio aims to target a lower weighted average carbon intensity relative to the Reference Portfolio/Benchmark.

***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The ESG Criteria is not designed to reduce investments considered prior to the application of this strategy by a committed minimum amount. The exclusionary screens are intended to ensure that issuers engaged in certain activities are entirely excluded from the Portfolio and is expected to remove between 0-10% of the Reference Portfolio/Benchmark.

***What is the policy to assess good governance practices of the investee companies?***

The Portfolio leverages Goldman Sachs Asset Management's proprietary approach to identifying and evaluating global norms violators and issuers that may be engaged in poor governance practices, in particular with respect to sound management structures, employee relations, remuneration of staff and tax compliance.

This proprietary approach seeks to identify, review, evaluate and monitor companies that are flagged by external data providers as being in violation of, or otherwise not aligned with, the United Nation Global Compact (UNGC) principles, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights as well as companies that have received high controversy scores (including significant governance controversies, severe labour rights controversies and severe tax compliance controversies). Following review of these external data inputs, companies that the Investment Adviser believes to have an ongoing and serious violation and/or are considered to not be following good governance practices with insufficient remediation will be excluded from the Portfolio. This list of companies will be reviewed on at least a semi-annual basis. The Investment Adviser may not be able to readily sell securities that are intended for exclusion from the Portfolio based on this review (for example, due to liquidity issues or for other reasons outside of the Investment Manager's control), however, will seek to divest as soon as possible in an orderly manner and in the best interests of Shareholders.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

## What is the asset allocation planned for this financial product?

**Asset allocation** describes the share of investments in specific assets.

At least 60% of investments will be aligned to the environmental and/or social characteristics promoted by this Portfolio, as noted above. Up to 40% may be held in cash, derivatives, mutual funds and collateralised securities, and issuers for which data is lacking and which fall into the lowest ESG category or otherwise become eligible for exclusion after purchase but cannot be readily disposed of.

**Taxonomy-aligned activities** are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

**How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

This question is not applicable

## To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Portfolio does not currently commit to invest in any “sustainable investments” within the meaning of the EU Taxonomy and therefore its alignment with the Taxonomy is 0%. However, the position will be kept under review as the underlying rules are finalised and the availability of reliable data increases over time.

## Does the financial product invest in fossil gas and/or Nuclear energy related activities that comply with the EU Taxonomy?

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

## What is the minimum share of investments in transitional and enabling activities?

As the Portfolio does not commit to invest any “sustainable investment” within the meaning of the EU Taxonomy, the minimum share of investments in transitional and enabling activities within the meaning of the EU Taxonomy is therefore also set at 0%.

<sup>1</sup>Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Portfolio promotes environmental and social characteristics but does not commit to making any sustainable investments. As a consequence, the Portfolio does not commit to a minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

**What is the minimum share of socially sustainable investments?**

This question is not applicable as the Portfolio does not commit to make socially sustainable investments.

**What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?**

Investments included under “#2 Other” include cash for liquidity purposes, derivatives, mutual funds and collateralised securities for efficient portfolio management, and issuers for which data is lacking or which fall into the lowest ESG category or otherwise become eligible for exclusion after purchase but cannot be readily disposed of. These may be used to achieve the investment objective of the Portfolio but neither promote the environmental or social characteristics of the Portfolio, nor qualify as sustainable investments. The percentage shown is expected to be the maximum which may be held in these instruments but the actual percentage may vary from time to time.

These financial instruments are not subject to any minimum environmental or social safeguards.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

Not applicable

**Where can I find more product specific information online?**

More product-specific information can be found on the website:

## Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name:  
Goldman Sachs US Dollar Short Duration Bond  
Portfolio

Legal entity identifier:  
549300KUIWPQGOJ05Y80

### Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

| Does this financial product have a sustainable investment objective?                                                                                                                                                                                                                                                                                                              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

## What environmental and/or social characteristics are promoted by this financial product?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The Investment Adviser implements an approach to Environmental, Social and Governance (ESG) considerations into its fundamental investment process as set forth below (the "ESG Criteria"). This consists of: (i) exclusionary screens; (ii) exclusions based on proprietary ESG ratings; (iii) portfolio level targets set forth below.

As part of the ESG investment process, the Investment Adviser will adhere to the ESG Criteria by avoiding investment in debt securities issued by corporate and sovereign issuers that are, in the opinion of the Investment Adviser, directly engaged in, and/or deriving significant revenues from the following activities:

- production of, and/or involvement in controversial weapons (including nuclear weapons);
- extraction and/or production of certain fossil fuels (including thermal coal and oil sands);
- production or sale of tobacco;
- production or sale of civilian firearms

Information on the criteria applied when assessing the aforementioned revenues may be found at the following [link](#).

The Portfolio will also seek to exclude from its investment universe companies the Investment Adviser believes to be violating the United Nations Global Compact's ten principles (which are widely recognised corporate sustainability principles that meet fundamental responsibilities in the areas of human rights, labour, environment and anti-corruption) using the proprietary approach to assess good governance practices described below as well as data provided by third party vendors.

Adherence to these ESG Criteria will be based on thresholds pre-determined by the Investment Adviser in its sole discretion and will be applied to proprietary data and/or data provided by one or more third party vendor(s). The Investment Adviser will rely on third-party data that it believes to be reliable, but it does not guarantee the accuracy of such third-party data. The Investment Adviser, in its sole discretion, retains the right to disapply data provided by third party vendors where it deems the data to be inaccurate or inappropriate. In some cases, data on specific companies may not be available or may be estimated by the Investment Adviser using internal processes or reasonable estimates. Potential omissions from the ESG Criteria may include but are not limited to newly listed companies to which a third party vendor may not yet have data mapped. In the course of gathering data, vendors may make certain value judgements. The Investment Adviser does not verify those judgements, nor quantify their impact upon its analysis. The Investment Adviser in its sole discretion may periodically update its screening process, amend the type of activities that are excluded for investment or revise the thresholds applicable to any such activities.

Additionally, the screening process for the Portfolio generally excludes government and corporate issuers that have the lowest category of ESG ratings according to the Investment Adviser's proprietary internal scoring system. The government and corporate issuers with the lowest ESG ratings according to the Investment Adviser's proprietary internal scoring system generally account for less than 10% of the issuers for which the Investment Adviser has assigned an internal ESG rating. The Portfolio may invest in a government or corporate issuer prior to such issuer receiving an internal ESG rating. There are instances where an internal ESG rating may not be available, which include but are not limited to, in-kind transfers, corporate actions, new issues, holdings that are soon to reach their maturity date, and/or certain short-term holdings.

The Investment Adviser in its sole discretion may periodically update its screening process, or revise the thresholds applicable to any such activities. There may be instances where existing issuers in the Portfolio that were not in the lowest category of ESG ratings or otherwise excluded pursuant to the ESG Criteria above at the time of purchase are subsequently determined by the Investment Adviser to either fall into the lowest ESG category or otherwise become eligible for exclusion based on the ESG Criteria above. The Investment Adviser will not be required to sell such securities and may not be able to sell such securities, for example, where they are not readily disposable due to liquidity issues or other reasons.

The Portfolio aims to target a lower exposure, relative to the Reference Portfolio/Benchmark noted below, to companies with certain pre-defined thresholds for diversity on company boards as measured by percentage of women on the company's board of directors. The current pre-defined threshold has been set by the Investment Adviser for the Portfolio to hold less than reference benchmark weight in issuers that have less than 10% women on board (i.e. boards with fewer than 10% of their members being women fall below the threshold), but may be changed at discretion of the Investment Adviser without prior notice to Shareholders (who may obtain details of the current threshold at any point from the Investment Adviser).

The Portfolio aims to target a lower weighted average carbon intensity relative to the Reference Portfolio/Benchmark noted below. Weighted average carbon intensity is a measure of the Scope 1 and 2 carbon emissions of a corporate issuer weighted by average portfolio weight. This measure is calculated by the Investment Adviser, using third party data. Scope 1 emissions include all direct Greenhouse Gas emissions from sources owned or controlled by the company. Scope 2 emissions include indirect GHG emissions from consumption of purchased electricity, heat, or steam, and the transmission and distribution (T&D) losses associated with some purchased utilities. There may be instances where Scope 1 and Scope 2 carbon emissions data may not be available for a particular corporate issuer.

The Investment Adviser will monitor these targets on an ongoing basis and seek to adjust the Portfolio on at least a quarterly basis to adhere to the targets.

Please note that the Reference Portfolio/Benchmark is not an ESG benchmark and that the Portfolio is not managed in view of achieving the long-term global warming objectives of the Paris Agreement. No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Portfolio.

***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

The following indicators are used to measure the attainment of the environmental and/or social characteristics promoted by the Portfolio:

- % of companies in the Portfolio deriving significant revenues from:
  - production of, and/or involvement in controversial weapons (including nuclear weapons);
  - extraction and/or production of certain fossil fuels (including thermal coal and oil sands);
  - production or sale of tobacco;
  - production or sale of civilian firearms
  
- % of companies in the Portfolio the Investment Adviser believes to be violating the United Nations Global Compact ten principles.
  
- % of government and corporate issuers in the Portfolio with an ESG rating according to the Investment Adviser's proprietary internal scoring system of less than or equal to 1.
  
- The difference between the exposure to companies with less than 10% of women on the company's board of directors of the Portfolio and the Reference/Portfolio Benchmark.
  
- The difference between the weighted average scope 1 and 2 carbon intensity of all the corporate issuers (where available) in the portfolio and weighted average scope 1 and 2 carbon intensity of the Reference Portfolio/Benchmark.

***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

This question is not applicable as the Portfolio does not commit to making sustainable investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

This question is not applicable as the Portfolio does not commit to making sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

***- How have the indicators for adverse impacts on sustainability factors been taken into account?***

Not applicable.

***- How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Not applicable.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

Yes, this Portfolio considers principal adverse impacts on sustainability factors (PAIs) across the environmental and/or social pillars. PAIs are taken into account qualitatively through the application of the binding ESG Criteria outlined above. On a non-binding and materiality basis, PAIs are also considered through firm-wide and investment team specific engagement. Additional information on which PAIs are taken into account are available on our website and will also be available in the Portfolio's annual report pursuant to SFDR Article 11.

☐ No

## What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investments objectives and risk tolerance.

The Investment Adviser implements the ESG Criteria on a binding basis into its investment process, as described above.

In addition to applying the ESG Criteria as set forth above the Investment Adviser may integrate ESG factors with traditional fundamental factors as part of its fundamental research process to seek to: (i) determine whether a particular fixed income security and/or sector is suitable and attractively priced for investment and (ii) assess their potential impact on the credit quality and spreads of a particular fixed income security. Traditional fundamental factors that the Investment Adviser may consider on a non-binding basis include, but are not limited to, leverage, earnings, enterprise value, industry trends and macroeconomic factors. ESG factors that the Investment Adviser may consider include, but are not limited to, carbon intensity and emissions profiles, workplace health and safety and cyber risk, stakeholder relations, employee relations, management incentives, governance structure and practices, environmental issues, physical climate risk exposure, loan servicer governance and controversies and labour practices. The identification of a risk related to an ESG factor will not necessarily exclude a particular fixed income security and/or sector that, in the Investment Adviser's view, is otherwise suitable and attractively priced for investment. The relevance of specific traditional fundamental factors and ESG factors to the fundamental investment process varies across asset classes, sectors and strategies. The Investment Adviser may utilise data sources provided by third party vendors and/or engage directly with issuers when assessing the above factors. The Investment Adviser employs a dynamic fundamental investment process that considers a wide range of factors, and no one factor or consideration is determinative.

The Investment Adviser intends to engage with corporate issuers in this Portfolio that the Investment Adviser believes have an under-representation of women on their board of directors. The threshold for engagement on this topic is currently set at 10% (i.e. boards with fewer than 10% of their members being women fall below the threshold), but may be changed at discretion of the Investment Adviser without prior notice to Shareholders (who may obtain details of the current threshold at any point from the Investment Adviser). The Investment Adviser may invest in a corporate issuer prior to or without engaging with such corporate issuer.

The Investment Adviser intends to engage with corporate and sovereign issuers in this Portfolio that the Investment Adviser believes to have low ESG credentials, with the objective to encourage corporate issuers to improve their ESG practices relative to peers and to encourage sovereigns to improve their overall environmental performance and to encourage enhanced disclosures of climate related metrics. The Investment Adviser may invest in an issuer prior to or without engaging with such issuer.

### ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

- The Portfolio implements the exclusionary screens as set forth in the ESG Criteria, further described above.
- The Portfolio excludes government and corporate issuers that have the lowest category of ESG ratings according to the Investment Adviser's proprietary internal scoring system at the time of purchasing, however, that the Portfolio may account for less than 10% in such issuers.
- The Portfolio aims to target a lower exposure, relative to the Reference Portfolio/Benchmark, to companies with less than 10% of women on the company's board of directors.
- The Portfolio aims to target a lower weighted average carbon intensity relative to the Reference Portfolio/Benchmark.

***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The ESG Criteria is not designed to reduce investments considered prior to the application of this strategy by a committed minimum amount. The exclusionary screens are intended to ensure that issuers engaged in certain activities are entirely excluded from the Portfolio and is expected to remove between 0-10% of the Reference Portfolio/Benchmark.

***What is the policy to assess good governance practices of the investee companies?***

The Portfolio leverages Goldman Sachs Asset Management's proprietary approach to identifying and evaluating global norms violators and issuers that may be engaged in poor governance practices, in particular with respect to sound management structures, employee relations, remuneration of staff and tax compliance.

This proprietary approach seeks to identify, review, evaluate and monitor companies that are flagged by external data providers as being in violation of, or otherwise not aligned with, the United Nation Global Compact (UNGC) principles, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights as well as companies that have received high controversy scores (including significant governance controversies, severe labour rights controversies and severe tax compliance controversies). Following review of these external data inputs, companies that the Investment Adviser believes to have an ongoing and serious violation and/or are considered to not be following good governance practices with insufficient remediation will be excluded from the Portfolio. This list of companies will be reviewed on at least a semi-annual basis. The Investment Adviser may not be able to readily sell securities that are intended for exclusion from the Portfolio based on this review (for example, due to liquidity issues or for other reasons outside of the Investment Manager's control), however, will seek to divest as soon as possible in an orderly manner and in the best interests of Shareholders.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

## What is the asset allocation planned for this financial product?

**Asset allocation** describes the share of investments in specific assets.

At least 50% of investments will be aligned to the environmental and/or social characteristics promoted by this Portfolio, as noted above. Up to 50% may be held in cash at custodian account level, derivatives and issuers for which data is lacking and issuers which fall into the lowest ESG category or otherwise become eligible for exclusion after purchase but cannot be readily disposed of.

**Taxonomy-aligned activities** are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

### ***How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?***

This question is not applicable

## To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Portfolio does not currently commit to invest in any “sustainable investments” within the meaning of the EU Taxonomy and therefore its alignment with the Taxonomy is 0%. However, the position will be kept under review as the underlying rules are finalised and the availability of reliable data increases over time.

### Does the financial product invest in fossil gas and/or Nuclear energy related activities that comply with the EU Taxonomy?

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

### What is the minimum share of investments in transitional and enabling activities?

As the Portfolio does not commit to invest any “sustainable investment” within the meaning of the EU Taxonomy, the minimum share of investments in transitional and enabling activities within the meaning of the EU Taxonomy is therefore also set at 0%.

<sup>1</sup>Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Portfolio promotes environmental and social characteristics but does not commit to making any sustainable investments. As a consequence, the Portfolio does not commit to a minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

**What is the minimum share of socially sustainable investments?**

This question is not applicable as the Portfolio does not commit to make socially sustainable investments.

**What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?**

Investments included under “#2 Other” include cash at custodian account level, derivatives for efficient portfolio management and issuers for which data is lacking or which fall into the lowest ESG category or otherwise become eligible for exclusion after purchase but cannot be readily disposed of. When establishing the alignment of any securitisations or asset-backed commercial paper held in the Fund or repurchase agreements in which it may invest with the E/S characteristics promoted by the Fund, the counterparty/issuer is assessed against the ESG Criteria described above and not the underlying collateral. These may be used to achieve the investment objective of the Portfolio but neither promote the environmental or social characteristics of the Portfolio, nor qualify as sustainable investments. The percentage shown is expected to be the maximum which may be held in these instruments but the actual percentage may vary from time to time.

These financial instruments are not subject to any minimum environmental or social safeguards.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

Not applicable

**Where can I find more product specific information online?**

More product-specific information can be found on the website:

## Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name:  
Goldman Sachs US Fixed Income Portfolio

Legal entity identifier:  
15LP308NQGOU658AIG33

### Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

| Does this financial product have a sustainable investment objective?                                                                                                                                                                                                                                                                                                              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

## What environmental and/or social characteristics are promoted by this financial product?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The Investment Adviser implements an approach to Environmental, Social and Governance (ESG) considerations into its fundamental investment process as set forth below (the "ESG Criteria"). This consists of: (i) exclusionary screens; (ii) exclusions based on proprietary ESG ratings; (iii) portfolio level targets set forth below.

As part of the ESG investment process, the Investment Adviser will adhere to the ESG Criteria by avoiding investment in debt securities issued by corporate and sovereign issuers that are, in the opinion of the Investment Adviser, directly engaged in, and/or deriving significant revenues from the following activities:

- production of, and/or involvement in controversial weapons (including nuclear weapons);
- extraction and/or production of certain fossil fuels (including thermal coal and oil sands);
- production or sale of tobacco;
- production or sale of civilian firearms

Information on the criteria applied when assessing the aforementioned revenues may be found at the following [link](#).

The Portfolio will also seek to exclude from its investment universe companies the Investment Adviser believes to be violating the United Nations Global Compact's ten principles (which are widely recognised corporate sustainability principles that meet fundamental responsibilities in the areas of human rights, labour, environment and anti-corruption) using the proprietary approach to assess good governance practices described below as well as data provided by third party vendors.

Adherence to these ESG Criteria will be based on thresholds pre-determined by the Investment Adviser in its sole discretion and will be applied to proprietary data and/or data provided by one or more third party vendor(s). The Investment Adviser will rely on third-party data that it believes to be reliable, but it does not guarantee the accuracy of such third-party data. The Investment Adviser, in its sole discretion, retains the right to disapply data provided by third party vendors where it deems the data to be inaccurate or inappropriate. In some cases, data on specific companies may not be available or may be estimated by the Investment Adviser using internal processes or reasonable estimates. Potential omissions from the ESG Criteria may include but are not limited to newly listed companies to which a third party vendor may not yet have data mapped. In the course of gathering data, vendors may make certain value judgements. The Investment Adviser does not verify those judgements, nor quantify their impact upon its analysis. The Investment Adviser in its sole discretion may periodically update its screening process, amend the type of activities that are excluded for investment or revise the thresholds applicable to any such activities.

Additionally, the screening process for the Portfolio generally excludes government and corporate issuers that have the lowest category of ESG ratings according to the Investment Adviser's proprietary internal scoring system. The government and corporate issuers with the lowest ESG ratings according to the Investment Adviser's proprietary internal scoring system generally account for less than 10% of the issuers for which the Investment Adviser has assigned an internal ESG rating. The Portfolio may invest in a government or corporate issuer prior to such issuer receiving an internal ESG rating. There are instances where an internal ESG rating may not be available, which include but are not limited to, in-kind transfers, corporate actions, new issues, holdings that are soon to reach their maturity date, and/or certain short-term holdings.

The Investment Adviser in its sole discretion may periodically update its screening process, or revise the thresholds applicable to any such activities. There may be instances where existing issuers in the Portfolio that were not in the lowest category of ESG ratings or otherwise excluded pursuant to the ESG Criteria above at the time of purchase are subsequently determined by the Investment Adviser to either fall into the lowest ESG category or otherwise become eligible for exclusion based on the ESG Criteria above. The Investment Adviser will not be required to sell such securities and may not be able to sell such securities, for example, where they are not readily disposable due to liquidity issues or other reasons.

The Portfolio aims to target a lower exposure, relative to the Reference Portfolio/Benchmark noted below, to companies with certain pre-defined thresholds for diversity on company boards as measured by percentage of women on the company's board of directors. The current pre-defined threshold has been set by the Investment Adviser for the Portfolio to hold less than reference benchmark weight in issuers that have less than 10% women on board (i.e. boards with fewer than 10% of their members being women fall below the threshold), but may be changed at discretion of the Investment Adviser without prior notice to Shareholders (who may obtain details of the current threshold at any point from the Investment Adviser).

The Portfolio aims to target a lower weighted average carbon intensity relative to the Reference Portfolio/Benchmark noted below. Weighted average carbon intensity is a measure of the Scope 1 and 2 carbon emissions of a corporate issuer weighted by average portfolio weight. This measure is calculated by the Investment Adviser, using third party data. Scope 1 emissions include all direct Greenhouse Gas emissions from sources owned or controlled by the company. Scope 2 emissions include indirect GHG emissions from consumption of purchased electricity, heat, or steam, and the transmission and distribution (T&D) losses associated with some purchased utilities. There may be instances where Scope 1 and Scope 2 carbon emissions data may not be available for a particular corporate issuer.

The Investment Adviser will monitor these targets on an ongoing basis and seek to adjust the Portfolio on at least a quarterly basis to adhere to the targets.

Please note that the Reference Portfolio/Benchmark is not an ESG benchmark and that the Portfolio is not managed in view of achieving the long-term global warming objectives of the Paris Agreement. No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Portfolio.

***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

The following indicators are used to measure the attainment of the environmental and/or social characteristics promoted by the Portfolio:

- % of companies in the Portfolio deriving significant revenues from:
  - production of, and/or involvement in controversial weapons (including nuclear weapons);
  - extraction and/or production of certain fossil fuels (including thermal coal and oil sands);
  - production or sale of tobacco;
  - production or sale of civilian firearms
- % of companies in the Portfolio the Investment Adviser believes to be violating the United Nations Global Compact ten principles.
- % of government and corporate issuers in the Portfolio with an ESG rating according to the Investment Adviser's proprietary internal scoring system of less than or equal to 1.
- The difference between the exposure to companies with less than 10% of women on the company's board of directors of the Portfolio and the Reference/Portfolio Benchmark.
- The difference between the weighted average scope 1 and 2 carbon intensity of all the corporate issuers (where available) in the portfolio and weighted average scope 1 and 2 carbon intensity of the Reference Portfolio/Benchmark.

***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

This question is not applicable as the Portfolio does not commit to making sustainable investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

This question is not applicable as the Portfolio does not commit to making sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

***- How have the indicators for adverse impacts on sustainability factors been taken into account?***

Not applicable.

***- How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Not applicable.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

Yes, this Portfolio considers principal adverse impacts on sustainability factors (PAIs) across the environmental and/or social pillars. PAIs are taken into account qualitatively through the application of the binding ESG Criteria outlined above. On a non-binding and materiality basis, PAIs are also considered through firm-wide and investment team specific engagement. Additional information on which PAIs are taken into account are available on our website and will also be available in the Portfolio's annual report pursuant to SFDR Article 11.

☐ No

## What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investments objectives and risk tolerance.

The Investment Adviser implements the ESG Criteria on a binding basis into its investment process, as described above.

In addition to applying the ESG Criteria as set forth above the Investment Adviser may integrate ESG factors with traditional fundamental factors as part of its fundamental research process to seek to: (i) determine whether a particular fixed income security and/or sector is suitable and attractively priced for investment and (ii) assess their potential impact on the credit quality and spreads of a particular fixed income security. Traditional fundamental factors that the Investment Adviser may consider on a non-binding basis include, but are not limited to, leverage, earnings, enterprise value, industry trends and macroeconomic factors. ESG factors that the Investment Adviser may consider include, but are not limited to, carbon intensity and emissions profiles, workplace health and safety and cyber risk, stakeholder relations, employee relations, management incentives, governance structure and practices, environmental issues, physical climate risk exposure, loan servicer governance and controversies and labour practices. The identification of a risk related to an ESG factor will not necessarily exclude a particular fixed income security and/or sector that, in the Investment Adviser's view, is otherwise suitable and attractively priced for investment. The relevance of specific traditional fundamental factors and ESG factors to the fundamental investment process varies across asset classes, sectors and strategies. The Investment Adviser may utilise data sources provided by third party vendors and/or engage directly with issuers when assessing the above factors. The Investment Adviser employs a dynamic fundamental investment process that considers a wide range of factors, and no one factor or consideration is determinative.

The Investment Adviser intends to engage with corporate issuers in this Portfolio that the Investment Adviser believes have an under-representation of women on their board of directors. The threshold for engagement on this topic is currently set at 10% (i.e. boards with fewer than 10% of their members being women fall below the threshold), but may be changed at discretion of the Investment Adviser without prior notice to Shareholders (who may obtain details of the current threshold at any point from the Investment Adviser). The Investment Adviser may invest in a corporate issuer prior to or without engaging with such corporate issuer.

The Investment Adviser intends to engage with corporate and sovereign issuers in this Portfolio that the Investment Adviser believes to have low ESG credentials, with the objective to encourage corporate issuers to improve their ESG practices relative to peers and to encourage sovereigns to improve their overall environmental performance and to encourage enhanced disclosures of climate related metrics. The Investment Adviser may invest in an issuer prior to or without engaging with such issuer.

### ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

- The Portfolio implements the exclusionary screens as set forth in the ESG Criteria, further described above.
- The Portfolio excludes government and corporate issuers that have the lowest category of ESG ratings according to the Investment Adviser's proprietary internal scoring system at the time of purchasing, however, that the Portfolio may account for less than 10% in such issuers.
- The Portfolio aims to target a lower exposure, relative to the Reference Portfolio/Benchmark, to companies with less than 10% of women on the company's board of directors.
- The Portfolio aims to target a lower weighted average carbon intensity relative to the Reference Portfolio/Benchmark.

***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The ESG Criteria is not designed to reduce investments considered prior to the application of this strategy by a committed minimum amount. The exclusionary screens are intended to ensure that issuers engaged in certain activities are entirely excluded from the Portfolio and is expected to remove between 0-10% of the Reference Portfolio/Benchmark.

***What is the policy to assess good governance practices of the investee companies?***

The Portfolio leverages Goldman Sachs Asset Management's proprietary approach to identifying and evaluating global norms violators and issuers that may be engaged in poor governance practices, in particular with respect to sound management structures, employee relations, remuneration of staff and tax compliance.

This proprietary approach seeks to identify, review, evaluate and monitor companies that are flagged by external data providers as being in violation of, or otherwise not aligned with, the United Nation Global Compact (UNGC) principles, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights as well as companies that have received high controversy scores (including significant governance controversies, severe labour rights controversies and severe tax compliance controversies). Following review of these external data inputs, companies that the Investment Adviser believes to have an ongoing and serious violation and/or are considered to not be following good governance practices with insufficient remediation will be excluded from the Portfolio. This list of companies will be reviewed on at least a semi-annual basis. The Investment Adviser may not be able to readily sell securities that are intended for exclusion from the Portfolio based on this review (for example, due to liquidity issues or for other reasons outside of the Investment Manager's control), however, will seek to divest as soon as possible in an orderly manner and in the best interests of Shareholders.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

## What is the asset allocation planned for this financial product?

**Asset allocation** describes the share of investments in specific assets.

At least 50% of investments will be aligned to the environmental and/or social characteristics promoted by this Portfolio, as noted above. Up to 50% may be held in cash, derivatives, other collateralised securities and issuers for which data is lacking and which fall into the lowest ESG category or otherwise become eligible for exclusion after purchase but cannot be readily disposed of.

**Taxonomy-aligned activities** are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

**How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

This question is not applicable

## To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Portfolio does not currently commit to invest in any “sustainable investments” within the meaning of the EU Taxonomy and therefore its alignment with the Taxonomy is 0%. However, the position will be kept under review as the underlying rules are finalised and the availability of reliable data increases over time.

### Does the financial product invest in fossil gas and/or Nuclear energy related activities that comply with the EU Taxonomy?

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

\* For the purpose of these graphs, ‘sovereign bonds’ consist of all sovereign exposures

### What is the minimum share of investments in transitional and enabling activities?

As the Portfolio does not commit to invest any “sustainable investment” within the meaning of the EU Taxonomy, the minimum share of investments in transitional and enabling activities within the meaning of the EU Taxonomy is therefore also set at 0%.

<sup>1</sup>Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Portfolio promotes environmental and social characteristics but does not commit to making any sustainable investments. As a consequence, the Portfolio does not commit to a minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

**What is the minimum share of socially sustainable investments?**

This question is not applicable as the Portfolio does not commit to make socially sustainable investments.

**What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?**

Investments included under “#2 Other” include cash for liquidity purposes, derivatives and other collateralised securities for efficient portfolio management, and issuers for which data is lacking or which fall into the lowest ESG category or otherwise become eligible for exclusion after purchase but cannot be readily disposed of. These may be used to achieve the investment objective of the Portfolio but neither promote the environmental or social characteristics of the Portfolio, nor qualify as sustainable investments. The percentage shown is expected to be the maximum which may be held in these instruments but the actual percentage may vary from time to time.

These financial instruments are not subject to any minimum environmental or social safeguards.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

Not applicable

**Where can I find more product specific information online?**

More product-specific information can be found on the website:

### Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

| Does this financial product have a sustainable investment objective?                                                                                                                                                                                                                                                                                                                                                         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Yes                                                                                                                                                                                                                                                                                                                                                                                                                          | No                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

## What environmental and/or social characteristics are promoted by this financial product?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The Investment Adviser implements an approach to Environmental, Social and Governance (ESG) considerations into its fundamental investment process which consists of exclusionary screens as set forth below (the "ESG Criteria").

As part of the ESG investment process, the Investment Adviser will adhere to the ESG Criteria by avoiding direct investments in transferable securities of companies that are, in the opinion of the Investment Adviser, directly engaged in, and/or deriving significant revenues from the following activities:

- production of, and/or involvement in controversial weapons;
- production or sale of tobacco;
- for-profit prisons;
- production or sale of civilian firearms;
- extraction of arctic oil and gas;
- extraction of oil sands;
- extraction, and/or generation of thermal coal;
- gambling-related business activities;
- production and/or distribution of palm oil;
- predatory lending

Information on the criteria applied when assessing the aforementioned revenues may be found at the following [link](#).

The Portfolio will also directly seek to exclude from its direct investments companies the Investment Adviser believes to be violating the United Nations Global Compact's ten principles (which are widely recognised corporate sustainability principles that meet fundamental responsibilities in the areas of human rights, labour, environment and anti-corruption). Please refer to the summary of the policy to assess good governance practices below for further detail.

The Portfolio will also seek to limit exposure to issuers in which it is directly invested with carbon intensity above a level the Investment Adviser deems appropriate.

Adherence to these ESG Criteria will be based on thresholds pre-determined by the Investment Adviser in its sole discretion and will be applied to proprietary data and/or data provided by one or more third party vendor(s). The Investment Adviser will rely on third-party data that it believes to be reliable, but it does not guarantee the accuracy of such third-party data. The Investment Adviser, in its sole discretion, retains the right to disapply data provided by third party vendors where it deems the data to be inaccurate or inappropriate. In some cases, data on specific companies may not be available or may be estimated by the Investment Adviser using internal processes or reasonable estimates. Potential omissions from the ESG Criteria may include but are not limited to newly listed companies to which a third party vendor may not yet have data mapped. In the course of gathering data, vendors may make certain value judgements. The Investment Adviser does not verify those judgements, nor quantify their impact upon its analysis. The Investment Adviser in its sole discretion may periodically update its screening process, amend the type of activities that are excluded for investment or revise the thresholds applicable to any such activities.

The Portfolio may also promote certain environmental and social characteristics by investing a portion of assets in certain Permitted Funds that either: incorporate revenue-based exclusionary thresholds (including, but not limited to, tobacco, gambling, for profit prisons, civilian firearms, weapons, nuclear weapons, controversial weapons, coal extraction, coal generation, and Arctic oil and gas).; and/or promote certain ESG themes, and/or environmental and social characteristics including, but not limited to, climate risk, governance, and employee matters.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Portfolio.

***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

The following indicators are used to measure the attainment of the environmental and/or social characteristics promoted by the Portfolio:

- % of direct investments in companies in the Portfolio deriving significant revenues from:
  - production of, and/or involvement in controversial weapons;
  - production or sale of tobacco;
  - for-profit prisons;
  - production or sale of civilian firearms;
  - extraction of arctic oil and gas;
  - extraction of oil sands;
  - extraction, and/or generation of thermal coal;
  - gambling-related business activities;
  - production and/or distribution of palm oil;
  - predatory lending
- % of direct investments in companies in the Portfolio the Investment Adviser believes to be violating the United Nations Global Compact ten principles.
- % of direct investments in companies in the Portfolio with carbon emissions scope 1 and 2 intensity above a threshold determined by the Investment Adviser.
- % of Portfolio that is invested in Permitted funds that themselves promote E/S characteristics.

***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

The consideration of investments made by the Portfolio as sustainable investments is determined by reference to the Investment Adviser's Sustainable Investment Framework, which includes an assessment as to whether the investment contributes to an environmental and/or social objective. Under this framework, an investment is considered to be contributing to an environmental and/or social objective via either a product or operational contribution.

Product contribution considers either i) the proportion of an issuer's revenue dedicated to an environmentally and/or socially sustainable impact category, ii) the alignment of a product to an environmental and/or social Sustainable Development Goal (SDG), iii) best-in-class scoring of an issue(r) as against environmental and/or social opportunities themes defined by an external data provider, or iv) the percentage of taxonomy aligned revenue of the issuer. Due to availability of reliable data, the taxonomy aligned revenue route will only be used as data improves.

Operational contribution takes a thematic approach, looking at the promotion of climate transition (environmental) within the operational framework of the issuer, inclusive growth (social) within the operational framework of the issuer, operational alignment to an environmental or social SDG, or the application of a best-in-class proprietary environmental and social score.

This Portfolio does not target a specific category of sustainable investments but assesses all investments made pursuant to its overall investment strategy using the Sustainable Investment Framework. Hence, the sustainable investments made by this Portfolio may contribute to a variety of environmental and/or social objectives of the sustainable investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

Issuers that are classified as contributing to a sustainable investment are also required to meet the do no significant harm (DNSH) criteria of the Investment Adviser's Sustainable Investment Framework. Any issuers that do not meet the DNSH test will not qualify as a sustainable investment. A proprietary quantitative or qualitative threshold for significant harm has been set for all 14 mandatory indicators relating to investee companies for adverse impacts on sustainability factors ("PAIs") set out in the regulatory technical standards supplementing SFDR.

Additionally, all issuers with a very severe controversy are considered to be causing significant harm and excluded from qualifying as a sustainable investment.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

***- How have the indicators for adverse impacts on sustainability factors been taken into account?***

This Portfolio considers principal adverse impacts on sustainability factors across environmental and social pillars. The PAIs are taken into account through the application of the DNSH principle outlined above for the determination of sustainable investments as well as qualitatively through the Portfolio's investment approach.

In regard to the consideration of the PAIs as part of the DNSH assessment of an issuer, as noted above a proprietary quantitative or qualitative threshold for significant harm has been set for all 14 mandatory PAIs relating to investee companies, and is assessed using information from an external data provider. These thresholds for significant harm have been set on a relative or absolute basis against each PAI depending on the Investment Adviser's assessment of the worst performing investments with respect to those PAIs. Where data is not available for a specific PAI a suitable proxy metric has been identified. If both PAI and proxy PAI data (where relevant) is not available and/or applicable to complete the DNSH assessment on an issuer, such issuer is generally excluded from qualifying as a sustainable investment.

Information on how the product considered principal adverse impacts on sustainability factors will be available in the Portfolio's Annual report.

***- How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The Portfolio leverages Goldman Sachs Asset Management's proprietary approach to identifying and evaluating companies which, amongst other factors, are not considered to be aligned with global norms as further described below. Following this assessment, any companies which are considered to be in violation of these global norms (including the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights) will be excluded from qualifying as a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

Yes, this Portfolio considers principal adverse impacts on sustainability factors (PAIs) across the environmental and/or social pillars through the DNSH assessment, as outlined above. PAIs are also taken into account qualitatively through the application of the binding ESG Criteria and on a non-binding and materiality basis they are also considered through firm-wide and investment team specific engagement. Additional information on which PAIs are taken into account are available on our website and will also be available in the Portfolio's annual report pursuant to SFDR Article 11.

☐ No

### What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investments objectives and risk tolerance.

The Investment Adviser implements the ESG Criteria on a binding basis into its investment process, as described above.

In addition to applying the ESG Criteria as set forth above, the Investment Adviser may integrate ESG factors with other factors as part of its research process to seek to determine whether a particular security and/or sector is suitable and attractively priced for investment. The identification of a risk related to an ESG factor will not necessarily exclude a particular security and/or sector that, in the Investment Adviser's view, is otherwise suitable and attractively priced for investment. The relevance of ESG and other factors to the investment process varies across asset classes, sectors and strategies. The Investment Adviser may utilise data sources provided by third party vendors and/or engage directly with issuers when assessing the above factors. The Investment Adviser employs a dynamic investment process that considers a wide range of factors, and no one factor or consideration is determinative.

The Portfolio will also seek to limit exposure to issuers with carbon intensity above a level the Investment Adviser deems appropriate.

### *What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?*

- The Portfolio implements the exclusionary screens as set forth in the ESG Criteria, further described above.
- The Portfolio seeks to limit exposure to issuers in which it is directly invested that have a carbon intensity above a level the Investment Adviser deems appropriate.
- The Portfolio invests in a portion of assets in certain Permitted Funds that promote E/S characteristics.

### *What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?*

The ESG Criteria is not designed to reduce investments considered prior to the application of this strategy by a committed minimum amount. The exclusionary screens are intended to ensure that issuers in certain Permitted Funds engaged in certain activities are entirely excluded from such Permitted Funds held by the Portfolio and removed between 5-10% of the Reference Portfolio/Benchmark.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

***What is the policy to assess good governance practices of the investee companies?***

The Portfolio leverages Goldman Sachs Asset Management's proprietary approach to identifying and evaluating global norms violators and issuers that may be engaged in poor governance practices, in particular with respect to sound management structures, employee relations, remuneration of staff and tax compliance.

This proprietary approach seeks to identify, review, evaluate and monitor companies that are flagged by external data providers as being in violation of, or otherwise not aligned with, the United Nation Global Compact (UNGC) principles, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights as well as companies that have received high controversy scores (including significant governance controversies, severe labour rights controversies and severe tax compliance controversies). Following review of these external data inputs, companies that the Investment Adviser believes to have an ongoing and serious violation and/or are considered to not be following good governance practices with insufficient remediation will be excluded from the Portfolio. This list of companies will be reviewed on at least a semi-annual basis. The Investment Adviser may not be able to readily sell securities that are intended for exclusion from the Portfolio based on this review (for example, due to liquidity issues or for other reasons outside of the Investment Manager's control), however, will seek to divest as soon as possible in an orderly manner and in the best interests of Shareholders.

## What is the asset allocation planned for this financial product?

**Asset allocation** describes the share of investments in specific assets.

Under normal circumstances it is generally expected that the asset allocation planned for this Portfolio may have 70% of net assets which is aligned (through the adoption of a framework on such allocations) to the environmental and/or social characteristics promoted by this Portfolio, as noted above, and up to 30% of net assets may be held in other investments including securities, financial derivative instruments (such as equity and bond futures, currency forwards, options), exchange traded funds and other mutual funds which do not apply environmental, social and governance considerations as part of their investment policy.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

**How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

This question is not applicable

## To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Whilst this Portfolio intends to make sustainable investments, it does not take into account the EU criteria for environmentally sustainable economic activities within the meaning of the EU Taxonomy and therefore its portfolio alignment with such EU Taxonomy is 0%. However, the position will be kept under review as the underlying rules are finalised and the availability of reliable data increases over time.

As noted above, whether investments made by this product are sustainable investments is determined by reference to the Investment Adviser's Sustainable Investment Framework for assessing the contribution of investments to environmental and/or social objectives. This product does not target one specific category of sustainable investments, but instead assesses all investments made pursuant to its overall investment strategy using the framework.

## Does the financial product invest in fossil gas and/or Nuclear energy related activities that comply with the EU Taxonomy<sup>1</sup>?

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

## What is the minimum share of investments in transitional and enabling activities?

Whilst this Portfolio intends to make sustainable investments, it does not take into account the EU criteria for environmentally sustainable economic activities within the meaning of the EU Taxonomy.

<sup>1</sup>Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

Whilst this Sub-Fund intends to make sustainable investments, it does not specifically commit to a minimum proportion of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy. Hence, the minimum commitment is 0%.

**What is the minimum share of socially sustainable investments?**

Whilst this product intends to make sustainable investments, it does not specifically commit to a minimum proportion of socially sustainable investments. Hence, the minimum commitment is 0%.

As noted above, whether investments made by this product are sustainable investments is determined by reference to the Investment Adviser's Sustainable Investment Framework for assessing the contribution of investments to environmental and/or social objectives. This product does not target one specific category of sustainable investments, but instead assesses all investments made pursuant to its overall investment strategy using the framework.

**What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?**

Investments included under "#2 Other" include derivatives (such as equity and bond futures), exchange traded funds and other mutual funds. These investments will typically be limited in their use within the long term asset allocation to strategies in which application of ESG policies are not possible (such as alternatives). Other exposure may also arise for either efficient portfolio management purposes, such as equitizing cash flows or expressing short term tactical views. These may be used to achieve the investment objective of the Portfolio but neither promote the environmental or social characteristics of the Portfolio, nor qualify as sustainable investments. The percentage shown is expected to be the maximum which may be held in these instruments but the actual percentage may vary from time to time.

These financial instruments are not subject to any minimum environmental or social safeguards.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

Not applicable

**Where can I find more product specific information online?**

## Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name:  
Goldman Sachs Global Multi-Asset Conservative  
Portfolio

Legal entity identifier:  
5493004KBHXA0SNNZ43

### Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

| Does this financial product have a sustainable investment objective?                                                                                                                                                                                                                                                                                                                                                           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

## What environmental and/or social characteristics are promoted by this financial product?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The Portfolio promotes certain environmental and social characteristics by investing a portion of assets in certain Permitted Funds that either: incorporate revenue-based exclusionary thresholds (including, but not limited to, tobacco, gambling, for profit prisons, civilian firearms, weapons, nuclear weapons, controversial weapons, coal extraction, coal generation, and Arctic oil and gas), and/or promote certain ESG themes, and/or environmental and social characteristics including, but not limited to, climate risk, governance, and employee matters.

### ***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

The following indicators are used to measure the attainment of the environmental and/or social characteristics promoted by the Portfolio:

- % of Portfolio that is invested in Permitted funds that themselves promote E/S characteristics.

### ***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

This question is not applicable as the Portfolio does not commit to making sustainable investments.

### ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

This question is not applicable as the Portfolio does not commit to making sustainable investments.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

#### ***- How have the indicators for adverse impacts on sustainability factors been taken into account?***

Not applicable.

#### ***- How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Not applicable.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

Yes, this Portfolio considers principal adverse impacts on sustainability factors (PAIs) across the environmental and/or social pillars. PAIs are taken into account qualitatively through the application of the binding ESG Criteria outlined above. On a non-binding and materiality basis, PAIs are also considered through firm-wide and investment team specific engagement. Additional information on which PAIs are taken into account are available on our website and will also be available in the Portfolio's annual report pursuant to SFDR Article 11.

☐ No

### **What investment strategy does this financial product follow?**

The investment strategy guides investment decisions based on factors such as investments objectives and risk tolerance.

The Investment Adviser implements the ESG Criteria on a binding basis into its investment process, as described above.

### ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

The Portfolio invests in a portion of assets in certain Permitted Funds that promote E/S characteristics.

### ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The ESG Criteria is not designed to reduce investments considered prior to the application of this strategy by a committed minimum amount.

### ***What is the policy to assess good governance practices of the investee companies?***

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

The Portfolio leverages Goldman Sachs Asset Management's proprietary approach to identifying and evaluating global norms violators and issuers that may be engaged in poor governance practices, in particular with respect to sound management structures, employee relations, remuneration of staff and tax compliance.

This proprietary approach seeks to identify, review, evaluate and monitor companies that are flagged by external data providers as being in violation of, or otherwise not aligned with, the United Nation Global Compact (UNGC) principles, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights as well as companies that have received high controversy scores (including significant governance controversies, severe labour rights controversies and severe tax compliance controversies). Following review of these external data inputs, companies that the Investment Adviser believes to have an ongoing and serious violation and/or are considered to not be following good governance practices with insufficient remediation will be excluded from the Portfolio. This list of companies will be reviewed on at least a semi-annual basis. The Investment Adviser may not be able to readily sell securities that are intended for exclusion from the Portfolio based on this review (for example, due to liquidity issues or for other reasons outside of the Investment Manager's control), however, will seek to divest as soon as possible in an orderly manner and in the best interests of Shareholders.

## What is the asset allocation planned for this financial product?

**Asset allocation** describes the share of investments in specific assets.

Under normal circumstances it is generally expected that the asset allocation planned for this Portfolio may have 50% of net assets allocated to Permitted Funds which are aligned (through the adoption of a framework within such funds) to the environmental and/or social characteristics promoted by this Portfolio, as noted above, and up to 50% of net assets may be held in other investments including securities, financial derivative instruments (such as equity and bond futures, currency forwards, options), exchange traded funds and other mutual funds which do not apply environmental, social and governance considerations as part of their investment policy.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

## How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

This question is not applicable

## To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Portfolio does not currently commit to invest in any “sustainable investments” within the meaning of the EU Taxonomy and therefore its alignment with the Taxonomy is 0%. However, the position will be kept under review as the underlying rules are finalised and the availability of reliable data increases over time.

## Does the financial product invest in fossil gas and/or Nuclear energy related activities that comply with the EU Taxonomy?

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

\* For the purpose of these graphs, ‘sovereign bonds’ consist of all sovereign exposures

## What is the minimum share of investments in transitional and enabling activities?

As the Portfolio does not commit to invest any “sustainable investment” within the meaning of the EU Taxonomy, the minimum share of investments in transitional and enabling activities within the meaning of the EU Taxonomy is therefore also set at 0%.

<sup>1</sup>Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Portfolio promotes environmental and social characteristics but does not commit to making any sustainable investments. As a consequence, the Portfolio does not commit to a minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

**What is the minimum share of socially sustainable investments?**

This question is not applicable as the Portfolio does not commit to make socially sustainable investments.

**What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?**

Investments included under “#2 Other” include derivatives (such as equity and bond futures), exchange traded funds and other mutual funds which do not apply environmental, social and governance considerations as part of their investment policy. These investments may be used broadly as part of the long term asset allocation as well as efficient portfolio management purposes, including equitising cash flows and expressing short term tactical views.

These may be used to achieve the investment objective of the Portfolio but neither promote the environmental or social characteristics of the Portfolio, nor qualify as sustainable investments. The percentage shown is expected to be the maximum which may be held in these instruments but the actual percentage may vary from time to time.

These financial instruments are not subject to any minimum environmental or social safeguards.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

Not applicable

**Where can I find more product specific information online?**

More product-specific information can be found on the website:

### Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

| Does this financial product have a sustainable investment objective?                                                                                                                                                                                                                                                                                                              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

## What environmental and/or social characteristics are promoted by this financial product?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The Portfolio promotes certain environmental and social characteristics by investing a portion of assets in certain Permitted Funds that either: incorporate revenue-based exclusionary thresholds (including, but not limited to, tobacco, gambling, for profit prisons, civilian firearms, weapons, nuclear weapons, controversial weapons, coal extraction, coal generation, and Arctic oil and gas), and/or promote certain ESG themes, and/or environmental and social characteristics including, but not limited to, climate risk, governance, and employee matters.

### ***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

The following indicators are used to measure the attainment of the environmental and/or social characteristics promoted by the Portfolio:

- % of Portfolio that is invested in Permitted funds that themselves promote E/S characteristics.

### ***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

This question is not applicable as the Portfolio does not commit to making sustainable investments.

### ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

This question is not applicable as the Portfolio does not commit to making sustainable investments.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

#### ***- How have the indicators for adverse impacts on sustainability factors been taken into account?***

Not applicable.

#### ***- How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Not applicable.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

Yes, this Portfolio considers principal adverse impacts on sustainability factors (PAIs) across the environmental and/or social pillars. PAIs are taken into account qualitatively through the application of the binding ESG Criteria outlined above. On a non-binding and materiality basis, PAIs are also considered through firm-wide and investment team specific engagement. Additional information on which PAIs are taken into account are available on our website and will also be available in the Portfolio's annual report pursuant to SFDR Article 11.

☐ No

### **What investment strategy does this financial product follow?**

The investment strategy guides investment decisions based on factors such as investments objectives and risk tolerance.

The Investment Adviser implements the ESG Criteria on a binding basis into its investment process, as described above.

### ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

The Portfolio invests in a portion of assets in certain Permitted Funds that promote E/S characteristics.

### ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The ESG Criteria is not designed to reduce investments considered prior to the application of this strategy by a committed minimum amount.

### ***What is the policy to assess good governance practices of the investee companies?***

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

The Portfolio leverages Goldman Sachs Asset Management's proprietary approach to identifying and evaluating global norms violators and issuers that may be engaged in poor governance practices, in particular with respect to sound management structures, employee relations, remuneration of staff and tax compliance.

This proprietary approach seeks to identify, review, evaluate and monitor companies that are flagged by external data providers as being in violation of, or otherwise not aligned with, the United Nation Global Compact (UNGC) principles, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights as well as companies that have received high controversy scores (including significant governance controversies, severe labour rights controversies and severe tax compliance controversies). Following review of these external data inputs, companies that the Investment Adviser believes to have an ongoing and serious violation and/or are considered to not be following good governance practices with insufficient remediation will be excluded from the Portfolio. This list of companies will be reviewed on at least a semi-annual basis. The Investment Adviser may not be able to readily sell securities that are intended for exclusion from the Portfolio based on this review (for example, due to liquidity issues or for other reasons outside of the Investment Manager's control), however, will seek to divest as soon as possible in an orderly manner and in the best interests of Shareholders.

## What is the asset allocation planned for this financial product?

**Asset allocation** describes the share of investments in specific assets.

Under normal circumstances it is generally expected that the asset allocation planned for this Portfolio may have 30% of net assets allocated to Permitted Funds which are aligned (through the adoption of a framework within such funds) to the environmental and/or social characteristics promoted by this Portfolio, as noted above, and up to 70% of net assets may be held in other investments including securities, financial derivative instruments (such as equity and bond futures, currency forwards, options), exchange traded funds and other mutual funds which do not apply environmental, social and governance considerations as part of their investment policy.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

### ***How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?***

This question is not applicable

## To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Portfolio does not currently commit to invest in any “sustainable investments” within the meaning of the EU Taxonomy and therefore its alignment with the Taxonomy is 0%. However, the position will be kept under review as the underlying rules are finalised and the availability of reliable data increases over time.

## Does the financial product invest in fossil gas and/or Nuclear energy related activities that comply with the EU Taxonomy?

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

## What is the minimum share of investments in transitional and enabling activities?

As the Portfolio does not commit to invest any “sustainable investment” within the meaning of the EU Taxonomy, the minimum share of investments in transitional and enabling activities within the meaning of the EU Taxonomy is therefore also set at 0%.

<sup>1</sup>Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Portfolio promotes environmental and social characteristics but does not commit to making any sustainable investments. As a consequence, the Portfolio does not commit to a minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

**What is the minimum share of socially sustainable investments?**

This question is not applicable as the Portfolio does not commit to make socially sustainable investments.

**What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?**

Investments included under “#2 Other” include derivatives (such as equity and bond futures), exchange traded funds and other mutual funds which do not apply environmental, social and governance considerations as part of their investment policy. These investments may be used broadly as part of the long term asset allocation as well as efficient portfolio management purposes, including equitising cash flows and expressing short term tactical views. These may be used to achieve the investment objective of the Portfolio but neither promote the environmental or social characteristics of the Portfolio, nor qualify as sustainable investments. The percentage shown is expected to be the maximum which may be held in these instruments but the actual percentage may vary from time to time.

These financial instruments are not subject to any minimum environmental or social safeguards.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

Not applicable

**Where can I find more product specific information online?**

More product-specific information can be found on the website:

### Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

| Does this financial product have a sustainable investment objective?                                                                                                                                                                                                                                                                                                              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

## What environmental and/or social characteristics are promoted by this financial product?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The Investment Adviser implements an approach to Environmental, Social and Governance (ESG) considerations into its fundamental investment process which consists of portfolio level targets as set forth below (the "ESG Criteria").

The Portfolio aims to target a higher environmental score (E-score) relative to the J.P. Morgan Emerging Market Bond Index Global Diversified. The Investment Adviser aims to measure an E-score for each sovereign issuer in the Portfolio and in the J.P. Morgan Emerging Market Bond Index Global Diversified according to its proprietary ESG scoring system, which amongst other factors may consider Air Quality, Water Scarcity, Climate & Energy, Biodiversity & Habitat. However, there may be instances where an internal E-score may not be available for a particular sovereign issuer, which include but are not limited to in kind transfers, new issues, holdings that are soon to reach their maturity date, and/or certain short-term holdings. If an issuer does not have an E-score it will be excluded when calculating the E-score of the Portfolio or the J.P. Morgan Emerging Market Bond Index Global Diversified, as applicable.

Although the Portfolio aims to target a better environmental score relative to the Reference Portfolio/Benchmark, please note that the relevant reference benchmark is not an ESG benchmark.

The Investment Adviser will monitor this target on an ongoing basis and seek to adjust the Portfolio on at least a quarterly basis to adhere to the target. Although the Portfolio aims to target a better environmental score relative to the J.P. Morgan Emerging Market Bond Index Global Diversified (as set out above), please note that the J.P. Morgan Emerging Market Bond Index Global Diversified is not an ESG benchmark.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Portfolio.

***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

The following indicators are used to measure the attainment of the environmental and/or social characteristics promoted by the Portfolio:

- The difference in the E-score of the Portfolio according to the Investment Adviser's proprietary ESG scoring system for each sovereign issuer and the E-score of the J.P. Morgan Emerging Market Bond Index Global Diversified.

***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

This question is not applicable as the Portfolio does not commit to making sustainable investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

This question is not applicable as the Portfolio does not commit to making sustainable investments.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

***- How have the indicators for adverse impacts on sustainability factors been taken into account?***

Not applicable.

***- How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Not applicable.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

Yes, this Portfolio considers principal adverse impacts on sustainability factors (PAIs) across the environmental and/or social pillars. PAIs are taken into account qualitatively through the application of the binding ESG Criteria outlined above. On a non-binding and materiality basis, PAIs are also considered through firm-wide and investment team specific engagement. Additional information on which PAIs are taken into account are available on our website and will also be available in the Portfolio's annual report pursuant to SFDR Article 11.

☐ No

## What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investments objectives and risk tolerance.

The Investment Adviser implements the ESG Criteria on a binding basis into its investment process, as described above.

In addition to applying the ESG Criteria as set forth above the Investment Adviser may integrate ESG factors with traditional fundamental factors as part of its fundamental research process to seek to: (i) determine whether a particular fixed income security and/or sector is suitable and attractively priced for investment and (ii) assess their potential impact on the credit quality and spreads of a particular fixed income security. Traditional fundamental factors that the Investment Adviser may consider on a non-binding basis include, but are not limited to, leverage, earnings, enterprise value, industry trends and macroeconomic factors. ESG factors that the Investment Adviser may consider include, but are not limited to, carbon intensity and emissions profiles, workplace health and safety and cyber risk, stakeholder relations, employee relations, management incentives, governance structure and practices, environmental issues, physical climate risk exposure, loan servicer governance and controversies and labour practices. The identification of a risk related to an ESG factor will not necessarily exclude a particular fixed income security and/or sector that, in the Investment Adviser's view, is otherwise suitable and attractively priced for investment. The relevance of specific traditional fundamental factors and ESG factors to the fundamental investment process varies across asset classes, sectors and strategies. The Investment Adviser may utilise data sources provided by third party vendors and/or engage directly with issuers when assessing the above factors. The Investment Adviser employs a dynamic fundamental investment process that considers a wide range of factors, and no one factor or consideration is determinative.

The Investment Adviser intends to engage with corporate issuers in this Portfolio that the Investment Adviser believes to have low ESG credentials, with the objective to encourage issuers to improve their ESG practices relative to peers. The Investment Adviser may invest in a corporate issuer prior to or without engaging with such corporate issuer.

The Investment Adviser intends to engage with sovereign issuers in this Portfolio that have a low E-score with the objective to encourage sovereigns to improve their overall environmental performance and to encourage enhanced disclosures of climate related metrics. The Investment Adviser may invest in a sovereign issuer prior to or without engaging with such sovereign issuer.

## ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

- The Portfolio aims to target a higher environmental score (E-score) relative to the J.P. Morgan Emerging Market Bond Index Global Diversified.

## ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

Not applicable

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

***What is the policy to assess good governance practices of the investee companies?***

The Portfolio leverages Goldman Sachs Asset Management's proprietary approach to identifying and evaluating global norms violators and issuers that may be engaged in poor governance practices, in particular with respect to sound management structures, employee relations, remuneration of staff and tax compliance.

This proprietary approach seeks to identify, review, evaluate and monitor companies that are flagged by external data providers as being in violation of, or otherwise not aligned with, the United Nation Global Compact (UNGC) principles, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights as well as companies that have received high controversy scores (including significant governance controversies, severe labour rights controversies and severe tax compliance controversies). Following review of these external data inputs, companies that the Investment Adviser believes to have an ongoing and serious violation and/or are considered to not be following good governance practices with insufficient remediation will be excluded from the Portfolio. This list of companies will be reviewed on at least a semi-annual basis. The Investment Adviser may not be able to readily sell securities that are intended for exclusion from the Portfolio based on this review (for example, due to liquidity issues or for other reasons outside of the Investment Manager's control), however, will seek to divest as soon as possible in an orderly manner and in the best interests of Shareholders.

## What is the asset allocation planned for this financial product?

**Asset allocation** describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

At least 75% of investments will be aligned to the environmental and/or social characteristics promoted by this Portfolio, as noted above. Up to 25% may be held in cash and/or derivatives, mutual funds, collateralised securities, fixed income securities issued by companies and and issuers for which data is lacking.

**How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

This question is not applicable

## To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Portfolio does not currently commit to invest in any “sustainable investments” within the meaning of the EU Taxonomy and therefore its alignment with the Taxonomy is 0%. However, the position will be kept under review as the underlying rules are finalised and the availability of reliable data increases over time.

## Does the financial product invest in fossil gas and/or Nuclear energy related activities that comply with the EU Taxonomy?

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

## What is the minimum share of investments in transitional and enabling activities?

As the Portfolio does not commit to invest any “sustainable investment” within the meaning of the EU Taxonomy, the minimum share of investments in transitional and enabling activities within the meaning of the EU Taxonomy is therefore also set at 0%.

<sup>1</sup>Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Portfolio promotes environmental and social characteristics but does not commit to making any sustainable investments. As a consequence, the Portfolio does not commit to a minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

**What is the minimum share of socially sustainable investments?**

This question is not applicable as the Portfolio does not commit to make socially sustainable investments.

**What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?**

Investments included under “#2 Other” include cash for liquidity purposes, derivatives, mutual funds, collateralised securities and fixed income securities issued by companies for efficient portfolio management purposes and issuers for which data is lacking. These may be used to achieve the investment objective of the Portfolio but neither promote the environmental or social characteristics of the Portfolio, nor qualify as sustainable investments. The percentage shown is expected to be the maximum which may be held in these instruments but the actual percentage may vary from time to time.

These financial instruments are not subject to any minimum environmental or social safeguards.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

Not applicable

**Where can I find more product specific information online?**

More product-specific information can be found on the website:

### Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

| Does this financial product have a sustainable investment objective?                                                                                                                                                                                                                                                                                                              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

## What environmental and/or social characteristics are promoted by this financial product?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The Investment Adviser implements an approach to Environmental, Social and Governance (ESG) considerations into its fundamental investment process as set forth below (the "ESG Criteria"). This consists of: (i) exclusionary screens; (ii) exclusions based on proprietary ESG ratings as set forth below.

As part of the ESG investment process, the Investment Adviser will adhere to the ESG Criteria by avoiding investment in debt securities issued by corporate and sovereign issuers that are, in the opinion of the Investment Adviser, directly engaged in, and/or deriving significant revenues from the following activities:

- production of, and/or involvement in controversial weapons (including nuclear weapons);
- extraction and/or production of certain fossil fuels (including thermal coal and oil sands);
- production or sale of tobacco;
- production or sale of civilian firearms

Information on the criteria applied when assessing the aforementioned revenues may be found at the following [link](#).

The Portfolio will also seek to exclude from its investment universe companies the Investment Adviser believes to be violating the United Nations Global Compact's ten principles (which are widely recognised corporate sustainability principles that meet fundamental responsibilities in the areas of human rights, labour, environment and anti-corruption) using the proprietary approach to assess good governance practices described below as well as data provided by third party vendors.

Adherence to these ESG Criteria will be based on thresholds pre-determined by the Investment Adviser in its sole discretion and will be applied to proprietary data and/or data provided by one or more third party vendor(s). The Investment Adviser will rely on third-party data that it believes to be reliable, but it does not guarantee the accuracy of such third-party data. The Investment Adviser, in its sole discretion, retains the right to disapply data provided by third party vendors where it deems the data to be inaccurate or inappropriate. In some cases, data on specific companies may not be available or may be estimated by the Investment Adviser using internal processes or reasonable estimates. Potential omissions from the ESG Criteria may include but are not limited to newly listed companies to which a third party vendor may not yet have data mapped. In the course of gathering data, vendors may make certain value judgements. The Investment Adviser does not verify those judgements, nor quantify their impact upon its analysis. The Investment Adviser in its sole discretion may periodically update its screening process, amend the type of activities that are excluded for investment or revise the thresholds applicable to any such activities.

Additionally, the screening process for the Portfolio generally excludes government and corporate issuers that have the lowest category of ESG ratings according to the Investment Adviser's proprietary internal scoring system provided, however, that the Portfolio may have exposure of up to 10% in such issuers. The Portfolio may invest in a government or corporate issuer prior to such issuer receiving an internal ESG rating. There are instances where an internal ESG rating may not be available, which include but are not limited to, in-kind transfers, corporate actions, new issues, holdings that are soon to reach their maturity date, and/or certain short-term holdings.

The Investment Adviser in its sole discretion may periodically update its screening process, or revise the thresholds applicable to any such activities. There may be instances where existing issuers in the Portfolio that were not in the lowest category of ESG ratings or otherwise excluded pursuant to the ESG Criteria above at the time of purchase are subsequently determined by the Investment Adviser to either fall into the lowest ESG category or otherwise become eligible for exclusion based on the ESG Criteria above. The Investment Adviser will not be required to sell such securities and may not be able to sell such securities, for example, where they are not readily disposable due to liquidity issues or other reasons.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Portfolio.

***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

The following indicators are used to measure the attainment of the environmental and/or social characteristics promoted by the Portfolio:

- % of companies in the Portfolio deriving significant revenues from:
  - production of, and/or involvement in controversial weapons (including nuclear weapons);
  - extraction and/or production of certain fossil fuels (including thermal coal and oil sands);
  - production or sale of tobacco;
  - production or sale of civilian firearms
- % of companies in the Portfolio the Investment Adviser believes to be violating the United Nations Global Compact ten principles.
- % of government and corporate issuers in the Portfolio with an ESG rating according to the Investment Adviser's proprietary internal scoring system of less than or equal to 1.

***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

This question is not applicable as the Portfolio does not commit to making sustainable investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

This question is not applicable as the Portfolio does not commit to making sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

***- How have the indicators for adverse impacts on sustainability factors been taken into account?***

Not applicable.

***- How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Not applicable.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

Yes, this Portfolio considers principal adverse impacts on sustainability factors (PAIs) across the environmental and/or social pillars. PAIs are taken into account qualitatively through the application of the binding ESG Criteria outlined above. On a non-binding and materiality basis, PAIs are also considered through firm-wide and investment team specific engagement. Additional information on which PAIs are taken into account are available on our website and will also be available in the Portfolio's annual report pursuant to SFDR Article 11.

☐ No

## What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investments objectives and risk tolerance.

The Investment Adviser implements the ESG Criteria on a binding basis into its investment process, as described above.

In addition to applying the ESG Criteria as set forth above the Investment Adviser may integrate ESG factors with traditional fundamental factors as part of its fundamental research process to seek to: (i) determine whether a particular fixed income security and/or sector is suitable and attractively priced for investment and (ii) assess their potential impact on the credit quality and spreads of a particular fixed income security. Traditional fundamental factors that the Investment Adviser may consider on a non-binding basis include, but are not limited to, leverage, earnings, enterprise value, industry trends and macroeconomic factors. ESG factors that the Investment Adviser may consider include, but are not limited to, carbon intensity and emissions profiles, workplace health and safety and cyber risk, stakeholder relations, employee relations, management incentives, governance structure and practices, environmental issues, physical climate risk exposure, loan servicer governance and controversies and labour practices. The identification of a risk related to an ESG factor will not necessarily exclude a particular fixed income security and/or sector that, in the Investment Adviser's view, is otherwise suitable and attractively priced for investment. The relevance of specific traditional fundamental factors and ESG factors to the fundamental investment process varies across asset classes, sectors and strategies. The Investment Adviser may utilise data sources provided by third party vendors and/or engage directly with issuers when assessing the above factors. The Investment Adviser employs a dynamic fundamental investment process that considers a wide range of factors, and no one factor or consideration is determinative.

The Investment Adviser intends to engage with corporate issuers in this Portfolio that the Investment Adviser believes have an under-representation of women on their board of directors. The threshold for engagement on this topic is currently set at 10% (i.e. boards with fewer than 10% of their members being women fall below the threshold), but may be changed at discretion of the Investment Adviser without prior notice to Shareholders (who may obtain details of the current threshold at any point from the Investment Adviser). The Investment Adviser may invest in a corporate issuer prior to or without engaging with such corporate issuer.

The Investment Adviser intends to engage with corporate and sovereign issuers in this Portfolio that the Investment Adviser believes to have low ESG credentials, with the objective to encourage corporate issuers to improve their ESG practices relative to peers and to encourage sovereigns to improve their overall environmental performance and to encourage enhanced disclosures of climate related metrics. The Investment Adviser may invest in an issuer prior to or without engaging with such issuer.

### ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

- The Portfolio implements the exclusionary screens as set forth in the ESG Criteria, further described above.
- The Portfolio excludes government and corporate issuers that have the lowest category of ESG ratings according to the Investment Adviser's proprietary internal scoring system at the time of purchasing, however, that the Portfolio may have exposure of up to 10% in such issuers.

***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The ESG Criteria is not designed to reduce investments considered prior to the application of this strategy by a committed minimum amount. The exclusionary screens are intended to ensure that issuers engaged in certain activities are entirely excluded from the Portfolio and is expected to remove between 0-10% of the Reference Portfolio/Benchmark.

***What is the policy to assess good governance practices of the investee companies?***

The Portfolio leverages Goldman Sachs Asset Management's proprietary approach to identifying and evaluating global norms violators and issuers that may be engaged in poor governance practices, in particular with respect to sound management structures, employee relations, remuneration of staff and tax compliance.

This proprietary approach seeks to identify, review, evaluate and monitor companies that are flagged by external data providers as being in violation of, or otherwise not aligned with, the United Nation Global Compact (UNGC) principles, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights as well as companies that have received high controversy scores (including significant governance controversies, severe labour rights controversies and severe tax compliance controversies). Following review of these external data inputs, companies that the Investment Adviser believes to have an ongoing and serious violation and/or are considered to not be following good governance practices with insufficient remediation will be excluded from the Portfolio. This list of companies will be reviewed on at least a semi-annual basis. The Investment Adviser may not be able to readily sell securities that are intended for exclusion from the Portfolio based on this review (for example, due to liquidity issues or for other reasons outside of the Investment Manager's control), however, will seek to divest as soon as possible in an orderly manner and in the best interests of Shareholders.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

## What is the asset allocation planned for this financial product?

**Asset allocation** describes the share of investments in specific assets.

At least 35% of investments will be aligned to the environmental and/or social characteristics promoted by this Portfolio, as noted above. Up to 65% may be held in cash, derivatives, collateralised securities and issuers for which data is lacking and which fall into the lowest ESG category or otherwise become eligible for exclusion after purchase but cannot be readily disposed of.

**Taxonomy-aligned activities** are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

**How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

This question is not applicable

## To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Portfolio does not currently commit to invest in any “sustainable investments” within the meaning of the EU Taxonomy and therefore its alignment with the Taxonomy is 0%. However, the position will be kept under review as the underlying rules are finalised and the availability of reliable data increases over time.

## Does the financial product invest in fossil gas and/or Nuclear energy related activities that comply with the EU Taxonomy?

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

## What is the minimum share of investments in transitional and enabling activities?

As the Portfolio does not commit to invest any “sustainable investment” within the meaning of the EU Taxonomy, the minimum share of investments in transitional and enabling activities within the meaning of the EU Taxonomy is therefore also set at 0%.

<sup>1</sup>Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Portfolio promotes environmental and social characteristics but does not commit to making any sustainable investments. As a consequence, the Portfolio does not commit to a minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

**What is the minimum share of socially sustainable investments?**

This question is not applicable as the Portfolio does not commit to make socially sustainable investments.

**What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?**

Investments included under “#2 Other” include cash for liquidity purposes, derivatives and collateralised securities for efficient portfolio management, and issuers for which data is lacking or which fall into the lowest ESG category or otherwise become eligible for exclusion after purchase but cannot be readily disposed of. These may be used to achieve the investment objective of the Portfolio but neither promote the environmental or social characteristics of the Portfolio, nor qualify as sustainable investments. The percentage shown is expected to be the maximum which may be held in these instruments but the actual percentage may vary from time to time.

These financial instruments are not subject to any minimum environmental or social safeguards.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

Not applicable

**Where can I find more product specific information online?**

## Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name:  
Goldman Sachs Global Fixed Income Plus Portfolio  
(Hedged)

Legal entity identifier:  
ZC1S3NQP6CRR81RF9065

### Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

| Does this financial product have a sustainable investment objective?                                                                                                                                                                                                                                                                                                              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

## What environmental and/or social characteristics are promoted by this financial product?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The Investment Adviser implements an approach to Environmental, Social and Governance (ESG) considerations into its fundamental investment process as set forth below (the "ESG Criteria"). This consists of: (i) exclusionary screens; (ii) exclusions based on proprietary ESG ratings; (iii) portfolio level targets set forth below.

As part of the ESG investment process, the Investment Adviser will adhere to the ESG Criteria by avoiding investment in debt securities issued by corporate and sovereign issuers that are, in the opinion of the Investment Adviser, directly engaged in, and/or deriving significant revenues from the following activities:

- production of, and/or involvement in controversial weapons (including nuclear weapons);
- extraction and/or production of certain fossil fuels (including thermal coal and oil sands);
- production or sale of tobacco;
- production or sale of civilian firearms

Information on the criteria applied when assessing the aforementioned revenues may be found at the following [link](#).

The Portfolio will also seek to exclude from its investment universe companies the Investment Adviser believes to be violating the United Nations Global Compact's ten principles (which are widely recognised corporate sustainability principles that meet fundamental responsibilities in the areas of human rights, labour, environment and anti-corruption) using the proprietary approach to assess good governance practices described below as well as data provided by third party vendors.

Adherence to these ESG Criteria will be based on thresholds pre-determined by the Investment Adviser in its sole discretion and will be applied to proprietary data and/or data provided by one or more third party vendor(s). The Investment Adviser will rely on third-party data that it believes to be reliable, but it does not guarantee the accuracy of such third-party data. The Investment Adviser, in its sole discretion, retains the right to disapply data provided by third party vendors where it deems the data to be inaccurate or inappropriate. In some cases, data on specific companies may not be available or may be estimated by the Investment Adviser using internal processes or reasonable estimates. Potential omissions from the ESG Criteria may include but are not limited to newly listed companies to which a third party vendor may not yet have data mapped. In the course of gathering data, vendors may make certain value judgements. The Investment Adviser does not verify those judgements, nor quantify their impact upon its analysis. The Investment Adviser in its sole discretion may periodically update its screening process, amend the type of activities that are excluded for investment or revise the thresholds applicable to any such activities.

Additionally, the screening process for the Portfolio generally excludes government and corporate issuers that have the lowest category of ESG ratings according to the Investment Adviser's proprietary internal scoring system provided, however, that the Portfolio may have exposure of up to 10% in such issuers. The Portfolio may invest in a government or corporate issuer prior to such issuer receiving an internal ESG rating. There are instances where an internal ESG rating may not be available, which include but are not limited to, in-kind transfers, corporate actions, new issues, holdings that are soon to reach their maturity date, and/or certain short-term holdings.

The Investment Adviser in its sole discretion may periodically update its screening process, or revise the thresholds applicable to any such activities. There may be instances where existing issuers in the Portfolio that were not in the lowest category of ESG ratings or otherwise excluded pursuant to the ESG Criteria above at the time of purchase are subsequently determined by the Investment Adviser to either fall into the lowest ESG category or otherwise become eligible for exclusion based on the ESG Criteria above. The Investment Adviser will not be required to sell such securities and may not be able to sell such securities, for example, where they are not readily disposable due to liquidity issues or other reasons.

The Portfolio aims to target a lower exposure, relative to the Reference Portfolio/Benchmark noted

below, to companies with certain pre-defined thresholds for diversity on company boards as measured by percentage of women on the company's board of directors. The current pre-defined threshold has been set by the Investment Adviser for the Portfolio to hold less than reference benchmark weight in issuers that have less than 10% women on board (i.e. boards with fewer than 10% of their members being women fall below the threshold), but may be changed at discretion of the Investment Adviser without prior notice to Shareholders (who may obtain details of the current threshold at any point from the Investment Adviser).

The Portfolio aims to target a lower weighted average carbon intensity relative to the Reference Portfolio/Benchmark noted below. Weighted average carbon intensity is a measure of the Scope 1 and 2 carbon emissions of a corporate issuer weighted by average portfolio weight. This measure is calculated by the Investment Adviser, using third party data. Scope 1 emissions include all direct Greenhouse Gas emissions from sources owned or controlled by the company. Scope 2 emissions include indirect GHG emissions from consumption of purchased electricity, heat, or steam, and the transmission and distribution (T&D) losses associated with some purchased utilities. There may be instances where Scope 1 and Scope 2 carbon emissions data may not be available for a particular corporate issuer.

The Investment Adviser will monitor these targets on an ongoing basis and seek to adjust the Portfolio on at least a quarterly basis to adhere to the targets.

Please note that the Reference Portfolio/Benchmark is not an ESG benchmark and that the Portfolio is not managed in view of achieving the long-term global warming objectives of the Paris Agreement. No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Portfolio.

***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

The following indicators are used to measure the attainment of the environmental and/or social characteristics promoted by the Portfolio:

- % of companies in the Portfolio deriving significant revenues from:
  - production of, and/or involvement in controversial weapons (including nuclear weapons);
  - extraction and/or production of certain fossil fuels (including thermal coal and oil sands);
  - production or sale of tobacco;
  - production or sale of civilian firearms
  
- % of companies in the Portfolio the Investment Adviser believes to be violating the United Nations Global Compact ten principles.
  
- % of government and corporate issuers in the Portfolio with an ESG rating according to the Investment Adviser's proprietary internal scoring system of less than or equal to 1.
  
- The difference between the exposure to companies with less than 10% of women on the company's board of directors of the Portfolio and the Reference/Portfolio Benchmark.
  
- The difference between the weighted average scope 1 and 2 carbon intensity of all the corporate issuers (where available) in the portfolio and weighted average scope 1 and 2 carbon intensity of the Reference Portfolio/Benchmark.

***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

This question is not applicable as the Portfolio does not commit to making sustainable investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

This question is not applicable as the Portfolio does not commit to making sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

***- How have the indicators for adverse impacts on sustainability factors been taken into account?***

Not applicable.

***- How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Not applicable.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

Yes, this Portfolio considers principal adverse impacts on sustainability factors (PAIs) across the environmental and/or social pillars. PAIs are taken into account qualitatively through the application of the binding ESG Criteria outlined above. On a non-binding and materiality basis, PAIs are also considered through firm-wide and investment team specific engagement. Additional information on which PAIs are taken into account are available on our website and will also be available in the Portfolio's annual report pursuant to SFDR Article 11.

☐ No

## What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investments objectives and risk tolerance.

The Investment Adviser implements the ESG Criteria on a binding basis into its investment process, as described above.

In addition to applying the ESG Criteria as set forth above the Investment Adviser may integrate ESG factors with traditional fundamental factors as part of its fundamental research process to seek to: (i) determine whether a particular fixed income security and/or sector is suitable and attractively priced for investment and (ii) assess their potential impact on the credit quality and spreads of a particular fixed income security. Traditional fundamental factors that the Investment Adviser may consider on a non-binding basis include, but are not limited to, leverage, earnings, enterprise value, industry trends and macroeconomic factors. ESG factors that the Investment Adviser may consider include, but are not limited to, carbon intensity and emissions profiles, workplace health and safety and cyber risk, stakeholder relations, employee relations, management incentives, governance structure and practices, environmental issues, physical climate risk exposure, loan servicer governance and controversies and labour practices. The identification of a risk related to an ESG factor will not necessarily exclude a particular fixed income security and/or sector that, in the Investment Adviser's view, is otherwise suitable and attractively priced for investment. The relevance of specific traditional fundamental factors and ESG factors to the fundamental investment process varies across asset classes, sectors and strategies. The Investment Adviser may utilise data sources provided by third party vendors and/or engage directly with issuers when assessing the above factors. The Investment Adviser employs a dynamic fundamental investment process that considers a wide range of factors, and no one factor or consideration is determinative.

The Investment Adviser intends to engage with corporate issuers in this Portfolio that the Investment Adviser believes have an under-representation of women on their board of directors. The threshold for engagement on this topic is currently set at 10% (i.e. boards with fewer than 10% of their members being women fall below the threshold), but may be changed at discretion of the Investment Adviser without prior notice to Shareholders (who may obtain details of the current threshold at any point from the Investment Adviser). The Investment Adviser may invest in a corporate issuer prior to or without engaging with such corporate issuer.

The Investment Adviser intends to engage with corporate and sovereign issuers in this Portfolio that the Investment Adviser believes to have low ESG credentials, with the objective to encourage corporate issuers to improve their ESG practices relative to peers and to encourage sovereigns to improve their overall environmental performance and to encourage enhanced disclosures of climate related metrics. The Investment Adviser may invest in an issuer prior to or without engaging with such issuer.

### ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

- The Portfolio implements the exclusionary screens as set forth in the ESG Criteria, further described above.
- The Portfolio excludes government and corporate issuers that have the lowest category of ESG ratings according to the Investment Adviser's proprietary internal scoring system at the time of purchasing, however, that the Portfolio may have exposure of up to 10% in such issuers.
- The Portfolio aims to target a lower exposure, relative to the Reference Portfolio/Benchmark, to companies with less than 10% of women on the company's board of directors.
- The Portfolio aims to target a lower weighted average carbon intensity relative to the Reference Portfolio/Benchmark.

***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The ESG Criteria is not designed to reduce investments considered prior to the application of this strategy by a committed minimum amount. The exclusionary screens are intended to ensure that issuers engaged in certain activities are entirely excluded from the Portfolio and is expected to remove between 0-10% of the Reference Portfolio/Benchmark.

***What is the policy to assess good governance practices of the investee companies?***

The Portfolio leverages Goldman Sachs Asset Management's proprietary approach to identifying and evaluating global norms violators and issuers that may be engaged in poor governance practices, in particular with respect to sound management structures, employee relations, remuneration of staff and tax compliance.

This proprietary approach seeks to identify, review, evaluate and monitor companies that are flagged by external data providers as being in violation of, or otherwise not aligned with, the United Nation Global Compact (UNGC) principles, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights as well as companies that have received high controversy scores (including significant governance controversies, severe labour rights controversies and severe tax compliance controversies). Following review of these external data inputs, companies that the Investment Adviser believes to have an ongoing and serious violation and/or are considered to not be following good governance practices with insufficient remediation will be excluded from the Portfolio. This list of companies will be reviewed on at least a semi-annual basis. The Investment Adviser may not be able to readily sell securities that are intended for exclusion from the Portfolio based on this review (for example, due to liquidity issues or for other reasons outside of the Investment Manager's control), however, will seek to divest as soon as possible in an orderly manner and in the best interests of Shareholders.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

## What is the asset allocation planned for this financial product?

**Asset allocation** describes the share of investments in specific assets.

At least 65% of investments will be aligned to the environmental and/or social characteristics promoted by this Portfolio, as noted above. Up to 35% may be held in cash, derivatives, mutual funds and collateralised securities and issuers for which data is lacking and which fall into the lowest ESG category or otherwise become eligible for exclusion after purchase but cannot be readily disposed of.

**Taxonomy-aligned activities** are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

### ***How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?***

This question is not applicable

## To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Portfolio does not currently commit to invest in any “sustainable investments” within the meaning of the EU Taxonomy and therefore its alignment with the Taxonomy is 0%. However, the position will be kept under review as the underlying rules are finalised and the availability of reliable data increases over time.

### Does the financial product invest in fossil gas and/or Nuclear energy related activities that comply with the EU Taxonomy?

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

\* For the purpose of these graphs, ‘sovereign bonds’ consist of all sovereign exposures

### What is the minimum share of investments in transitional and enabling activities?

As the Portfolio does not commit to invest any “sustainable investment” within the meaning of the EU Taxonomy, the minimum share of investments in transitional and enabling activities within the meaning of the EU Taxonomy is therefore also set at 0%.

<sup>1</sup>Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Portfolio promotes environmental and social characteristics but does not commit to making any sustainable investments. As a consequence, the Portfolio does not commit to a minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

**What is the minimum share of socially sustainable investments?**

This question is not applicable as the Portfolio does not commit to make socially sustainable investments.

**What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?**

Investments included under “#2 Other” include cash for liquidity purposes, derivatives, mutual funds and collateralised securities for efficient portfolio management, and issuers for which data is lacking or which fall into the lowest ESG category or otherwise become eligible for exclusion after purchase but cannot be readily disposed of. These may be used to achieve the investment objective of the Portfolio but neither promote the environmental or social characteristics of the Portfolio, nor qualify as sustainable investments. The percentage shown is expected to be the maximum which may be held in these instruments but the actual percentage may vary from time to time.

These financial instruments are not subject to any minimum environmental or social safeguards.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

Not applicable

**Where can I find more product specific information online?**

More product-specific information can be found on the website:

### Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

| Does this financial product have a sustainable investment objective?                                                                                                                                                                                                                                                                                                              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

## What environmental and/or social characteristics are promoted by this financial product?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The Investment Adviser implements an approach to Environmental, Social and Governance (ESG) considerations into its fundamental investment process which consists of exclusionary screens as set forth below (the "ESG Criteria").

As part of the ESG investment process, the Portfolio will adhere to the ESG Criteria by avoiding investments in companies that are, in the opinion of the Investment Adviser, directly engaged in, and/or deriving significant revenue from the following activities which as at the date of the Prospectus include:

- controversial weapons (including nuclear weapons);
- extraction and/or production of certain fossil fuels (including thermal coal, oil sands, arctic oil and gas);
- tobacco;
- alcohol;
- adult entertainment;
- for-profit prisons;
- civilian firearms;
- gambling

Information on the criteria applied when assessing the aforementioned revenues may be found at the following [link](#).

The Portfolio will also seek to exclude from its investment universe companies the Investment Adviser believes to be violating the United Nations Global Compact's ten principles (which are widely recognised corporate sustainability principles that meet fundamental responsibilities in the areas of human rights, labour, environment and anti-corruption). Please refer to the summary of the policy to assess good governance practices below for further detail.

Adherence to these ESG Criteria will be based on thresholds pre-determined by the Investment Adviser in its sole discretion and will be applied to proprietary data and/or data provided by one or more third party vendor(s). The Investment Adviser will rely on third-party data that it believes to be reliable, but it does not guarantee the accuracy of such third-party data. The Investment Adviser, in its sole discretion, retains the right to disapply data provided by third party vendors where it deems the data to be inaccurate or inappropriate. In some cases, data on specific companies may not be available or may be estimated by the Investment Adviser using internal processes or reasonable estimates. Potential omissions from the ESG Criteria may include but are not limited to newly listed companies to which a third party vendor may not yet have data mapped. In the course of gathering data, vendors may make certain value judgements. The Investment Adviser does not verify those judgements, nor quantify their impact upon its analysis. The Investment Adviser in its sole discretion may periodically update its screening process, amend the type of activities that are excluded for investment or revise the thresholds applicable to any such activities.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Portfolio.

***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

The following indicators are used to measure the attainment of the environmental and/or social characteristics promoted by the Portfolio:

- % of companies in the Portfolio deriving significant revenues from:
  - controversial weapons (including nuclear weapons);
  - extraction and/or production of certain fossil fuels (including thermal coal, oil sands, arctic oil and gas);
  - tobacco;
  - alcohol;
  - adult entertainment;
  - for-profit prisons;
  - civilian firearms;
  - gambling
  
- % of companies in the Portfolio the Investment Adviser believes to be violating the United Nations Global Compact ten principles.

***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

This question is not applicable as the Portfolio does not commit to making sustainable investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

This question is not applicable as the Portfolio does not commit to making sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

***- How have the indicators for adverse impacts on sustainability factors been taken into account?***

Not applicable.

***- How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Not applicable.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

Yes, this Portfolio considers principal adverse impacts on sustainability factors (PAIs) across the environmental and/or social pillars. PAIs are taken into account qualitatively through the application of the binding ESG Criteria outlined above. On a non-binding and materiality basis, PAIs are also considered through firm-wide and investment team specific engagement. Additional information on which PAIs are taken into account are available on our website and will also be available in the Portfolio's annual report pursuant to SFDR Article 11.

☐ No

## What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investments objectives and risk tolerance.

The Investment Adviser implements the ESG Criteria on a binding basis into its investment process, as described above.

### *What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?*

- The Portfolio implements the exclusionary screens as set forth in the ESG Criteria, further described above.

### *What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?*

The ESG Criteria is not designed to reduce investments considered prior to the application of this strategy by a committed minimum amount. The exclusionary screens are intended to ensure that issuers engaged in certain activities are entirely excluded from the Portfolio and is expected to remove between 0-10% of the Reference Portfolio/Benchmark.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

### *What is the policy to assess good governance practices of the investee companies?*

The Portfolio leverages Goldman Sachs Asset Management's proprietary approach to identifying and evaluating global norms violators and issuers that may be engaged in poor governance practices, in particular with respect to sound management structures, employee relations, remuneration of staff and tax compliance.

This proprietary approach seeks to identify, review, evaluate and monitor companies that are flagged by external data providers as being in violation of, or otherwise not aligned with, the United Nation Global Compact (UNGC) principles, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights as well as companies that have received high controversy scores (including significant governance controversies, severe labour rights controversies and severe tax compliance controversies). Following review of these external data inputs, companies that the Investment Adviser believes to have an ongoing and serious violation and/or are considered to not be following good governance practices with insufficient remediation will be excluded from the Portfolio. This list of companies will be reviewed on at least a semi-annual basis. The Investment Adviser may not be able to readily sell securities that are intended for exclusion from the Portfolio based on this review (for example, due to liquidity issues or for other reasons outside of the Investment Manager's control), however, will seek to divest as soon as possible in an orderly manner and in the best interests of Shareholders.

## What is the asset allocation planned for this financial product?

**Asset allocation** describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

At least 90% of investments will be aligned to the environmental and/or social characteristics promoted by this Portfolio, as noted above. Up to 10% may be held in cash and derivatives.

**How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

This question is not applicable

### To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Portfolio does not currently commit to invest in any “sustainable investments” within the meaning of the EU Taxonomy and therefore its alignment with the Taxonomy is 0%. However, the position will be kept under review as the underlying rules are finalised and the availability of reliable data increases over time.

### Does the financial product invest in fossil gas and/or Nuclear energy related activities that comply with the EU Taxonomy?

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

\* For the purpose of these graphs, ‘sovereign bonds’ consist of all sovereign exposures

### What is the minimum share of investments in transitional and enabling activities?

As the Portfolio does not commit to invest any “sustainable investment” within the meaning of the EU Taxonomy, the minimum share of investments in transitional and enabling activities within the meaning of the EU Taxonomy is therefore also set at 0%.

<sup>1</sup>Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Portfolio promotes environmental and social characteristics but does not commit to making any sustainable investments. As a consequence, the Portfolio does not commit to a minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

**What is the minimum share of socially sustainable investments?**

This question is not applicable as the Portfolio does not commit to make socially sustainable investments.

**What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?**

Investments included under "#2 Other" include derivatives and cash, allocated at the discretion of the underlying managers. These may be used to achieve the investment objective of the Portfolio but neither promote the environmental or social characteristics of the Portfolio, nor qualify as sustainable investments. The percentage shown is expected to be the maximum which may be held in these instruments but the actual percentage may vary from time to time.

These financial instruments are not subject to any minimum environmental or social safeguards.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

Not applicable

**Where can I find more product specific information online?**

More product-specific information can be found on the website:
